PERMISSION TO USE

In presenting this thesis in partial fulfillment of the requirements for a postgraduate degree from Universiti Utara Malaysia, I agree that the University Library may make it freely available for inspection. I further agree that permission for copying of this project in any manner, in whole or in part, for scholarly purposes may be granted by my supervisor(s) or, in their absence, by the Dean of the Graduate School. It is understood that any copying or publication or use of this thesis or parts thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to University Utara Malaysia for any scholarly use which may be made of any material from my thesis.

Request for permission to copy or to make other use of materials in this thesis, in whole or in part, should be addressed to:

**Dean of the Graduate School
Universiti Utara Malaysia

Kedah Darul Aman**

ABSTRACT

Tourists spend millions of dollars when they travel to their destination. Most countries welcome them and often like to take care of the tourist by providing sufficient information and facilities for their comfort. Tourists who travel from destination to destination want to make their travel arrangements before they leave home. Web based application has become the most useful tools for tourists, to access the information about these destination. This study propose of the web based tourists guide by providing them with helpful information about the restaurants details such as: name, orders, address, telephone number and the available foods.

ACKNOWLEDGMENTS

“In the Name of Allah the Most Gracious and Most Merciful”

First foremost, all praises to Allah (SWT), the Almighty, the Most Gracious and Most Merciful, without His guidance and blessing, I would not have been able to even begin, let alone complete, such a complex and perplexing undertaking.

I would like to express my deepest gratitude to a number of people who have participated in this research, on one way or another, by giving up their valuable time and energy, and their precious thoughts and comments. My heartfelt thanks to my supervisors, Associate Professor Dr. Norita Md Norwawi, and Associate Professor Dr. Wan Rozaini Sheik Osman their invaluable input and guidance, without which I would have been utterly lost in the complexities of this project. My extended thanks to my critical evaluators during the defence, who made me realize that it is not merely what you know, but how you convey it, that matters. Knowledge is truly meant to be shared for it to be any use.

I would like to thanks and dedicate this work to my beloved and forever cherished, and who guided me to complete my study my father Mohammad, also I will not forget my mother who every time asked about me, and last not the least my brothers Abdelrazaq, Gith, Al-amen, Yousef, and my dear sisters, and thanks to every one he/she asked about me. May Allah (SWT) bless us all.

CHAPTER ONE

INTRODUCTION

1.1 INTRODUCTION

The World Wide Web is able to take a great quantity of information which can be accessed for anyone at anytime they have internet connection, these characteristics of the World Wide Web make the industry turn to use the huge benefits of using such service to enhance and improve their industry (Wu, et al, 2006). The wide use of the internet in the 1990s has enhanced and change the way of doing the business in the tourism industry, many tourism firms turned to use the e-tourism to get their customer satisfaction, and these firms should make their customers satisfy to get better use of the e-tourism (Moharrer & Tahayori, 2007). (Rumetshofer & Woss, 2005) advocated that, lately there are a lot of Web-based tourism information systems (TIS) have been established to serve the tourism industry, the main factors affected theTIS and prove its acceptance and success are the quantity and the quality of data it provides.

Zhou, & DeSantis (2005) stated that the tourism information is one of the most visited information on the internet, and they described it as information requested by different people from different cultures and countries, and its nearly everyone needs from time to time. "Information is a basic aspect of the product of the tourist industry, and the use of the information commutation technology (ICT) has been at the core of the way it has been structured in the last few years. (Rastroll & Alarcon, 2000).

only

6.3 CONCLUSION

This chapter discussed on user acceptance, usability results and system limitations. At the end of the chapter proposed recommendation to support efficiency, effectiveness and satisfaction system to do self check for the available restaurant and reduce workload for course administrator.

The design Web-Based Tourism Guide System Alor Star Restaurant should be implemented and tested via the actual Web connection to get more consistent and more determining for the error that occurs.

The design Web-Based Tourism Guide System Alor Star Restaurant would give better performance by upgrade some more practical features and helpful functions based on the tourist needs. It is believed that when much more functions which cover of several aspects of these tourist needs, and the design Web-Based Tourism Guide System Alor Star Restaurant can perform much better.
