Universiti Utara Malaysia

PERAKUAN KERJA KERTAS PROJEK
(Certificate of Project Paper)

Saya, yang bertandatangan, memperakukan bahawa
(I, the undersigned, certify that)

TIRAYUT AYUYA

calon untuk Ijazah
(candidate for the degree of) **MSc. (ICT)**

telah mengemukakan kertas projek yang bertajuk
(has presented his/her project paper of the following title)

**COMMUNITY DEVELOPMENT DEPARTMENT WEB
PORTAL FOR SOUTHERN BORDER OF THAILAND**

seperti yang tercatat di muka surat tajuk dan kulit kertas projek
(as it appears on the title page and front cover of project paper)

bahawa kertas projek tersebut boleh diterima dari segi bentuk serta kandungan dan meliputi bidang ilmu dengan memuaskan.
(that the project paper acceptable in form and content, and that a satisfactory knowledge of the filed is covered by the project paper).

Nama Penyelia Utama
(Name of Main Supervisor): **ASSOC. PROF. MD ZAHIR MAT CHA**

Tandatangan
(Signature) : 

ASSOC. PROF. MD. ZAHIR MAT CHA
Deputy Dean (Research & Post Graduate)
Faculty of Information Technology
Universiti Utara Malaysia

Tarikh
(Date) : 28/10/2016

PERMISSION TO USE

In presenting this thesis in partial fulfillment of the requirements for a postgraduate degree from University Utara Malaysia, I agree that the University Library may take it freely available for inspection. I further agree that permission for copying of this thesis in any manner, in whole or in part, for scholarly purpose may be granted by my supervisor or, in their absence, by the Dean of Faculty of Information Technology. It is understood that any copying or publication or use of this thesis or parts thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to University Utara Malaysia for any scholarly use which may be made of any materials from my thesis.

Requests for permission to copy or to make other use of materials in this thesis, in whole or in part should be address to:

**Dean of Faculty of Information Technology
University Utara Malaysia
06010 UUM Sintok
Kedah Darul Aman**

ABSTRAK

Kemajuan dalam perkakasan sistem maklumat pangkalan data ini telah berkembang maju dalam pengurusan dan pentabiran barangan dan perkhidmatan pada masa kini. Kebanyakan organisasi menguruskan maklumat mereka dengan menggunakan teknologi pangkalan data. Faedah dan manfaat yang boleh di perolehi dengan penggunaan pangkalan data telah membuahkan organisasi OTOP (Satu Mukim Satu Produk) untuk menggunakan teknologi pangkalan data ini. Dengan penggunaan “Web-Portal” untuk sistem OTOP ini pihak pengurusan boleh melayari laman Web untuk mencari, menambah, mengubah data-data seperti wilayah, pengeluaran, jenis barang, alamat pengusaha, tempahan, pembayaran dan sebagainya untuk meningkatkan taraf permintaan persaingan dalam Negara. Ini juga memasukkan penempahan dan pembelian barangan OTOP “online”. Methodologi yang digunakan adalah “Object-Oriented” dengan pendekatan “Unified Modeling Language” yang diaplikasikan untuk menganalisis dan rekabentuk sistem. Pelaksanaan system telah menggunakan teknik dan pekakasan UML untuk merekabentuk seperti Diagram Kelas, Diagram Use Case dan Diagram Sequence. Pertubuhan OTOP dapat memusatkan maklumat organisasi dalam persekitaran laman Web Portal dan juga perkakasan sistem maklumat “online”. Sistem maklumat “online” boleh membantu pelanggan sama ada untuk menempah atau membeli barangan OTOP “online”. Pelanggan boleh melayari laman Web sistem ini pada bila-bila masa dimana saja. Hasil dan penilaian projek ini didiskusikan pada akhir Bab tesis ini dimana diskusi mengenai signifikan projek, kerja-kerja sokongan untuk kajian masa depan dan kaji-selidik dalam perkembangan konsep, peralatan, teknik dan methodologi.

ABSTRACT

The advancement of tools for database information development has broadened its usage in management and administrative factor of goods and services lately. Most organizations managed their information via the latest database technology. The benefit derived from the usage of the database makes the OTOP (One Tambon One Product) organization to develop and use this database. With the usage of Web-Portal for OTOP system, the management can do transaction, search, edit, and add information like province, producer, product-type, addresses, order, payment, and so forth to enhance competitive demand within the nation. This also includes ordering and purchasing OTOP products online. The methodology used is Object-Oriented with Unified Modeling Language Approach that was being applied for analyzing and designing system. The system implementation uses UML notation supported to design Database, User Interface, and Procedure of the System such as Class Diagram, Use Case Diagram, and sequence Diagram. The OTOP organization can centralize its information in Web Portal and also online database. This online database can assist the customers either to order or to purchase the OTOP products online. The customers can surf information and easily access to the system anytime anywhere. The outcome and evaluation of the project are discussed at the end of the dissertation then discussion on the project significance, recommended work for future study and research in the development of concepts, tools, techniques and methodologies.

ACKNOWLEDGEMENTS

In the name of “ALLAH” the most gracious and the most merciful, with the inner strength, patience, perseverance and eternal love he has bestowed upon me I have proudly and gratefully completed my tedious, and strenuous thesis. A very depth thanks that no words can utter goes to my dear parents, brothers, sisters, and friends. With their moral support and encouragement and especially to “MEK” and “ABAH” your financial support was of great assurance of my success in the pursuance of my studies. Without you and your care and worries, I would not have been here today. Thanks, Mum and Dad, may “ALLAH” blessed you every second of the day. I would also like to take this opportunity to express my gratitude to OTOP Central Committee of the Southern Border Provinces, my caring, understanding and patient supervisor, ASSOCIATE PROFESSOR MOHD ZAHIR BIN MAT CHA. You have ignited the spirit in me to run this hard race of preparing and writing this piece of thesis. You give me valuable and endless pieces of advice and ideas in developing the system from the beginning till the end. Your endless effort and support in helping me to finally complete my work was of great excellence. My sincere thanks to all lecturers and staff of Information Technology Faculty, UUM who have assisted me during my studies there.

Lastly, my deep appreciation and thanks to MISS. MATHANA and KAK DAYANG for their sacrifices, advice, care and understanding.

To all, your cooperativeness, close supervision and strong support are the ingredients for me to complete my hard-earned project paper.

EXECUTIVE SUMMARY

The Web-Portal for OTOP (One Tambon One Product) system for the Southern Provinces of Thailand serves to implement and support the administrative, managerial and production of goods by the Community Development Department. The project implemented focused on Web-Portal for OTOP system. The system implemented Web Database application using two open source technologies, PHP as a scripting language and MySQL for database, which both are popularly use to develop web application at the moment. The project uses Object Oriented and Unified Modeling Language (UML) for analyzing and designing. The system was designed by using Object-Oriented methodology along with UML notation and Diagram that provide the best practices, processes, methodologies, and guidelines. Two types of designs are access layer and user interface design. CASE tools that used for analysis and design system are Microsoft Visio and Rational Rose. The Web-Portal for OTOP System project introduces system management online that allows users to access the system, view province, producer, personal details, product-type, OTOP activity, order details, payment details, to edit, add, update information, transaction and order sales. The development of methodologies, techniques and tools in this project will assist, manage, administer and enhance future advancement of Information Technology System in the near future.

CHAPTER 1

INTRODUCTION

Due to the current crisis in the Southern Thai borders, such as Pattani, Yala and Narathiwat provinces, the local people need to change their income generation methods. The main source of income for these people comes from homemade products and from plantations. However, such source of income is believed to be less sufficient to support the family during the current economic situation. The traditional products such as the “Kopiah” Muslim man headgear, Embroidered Shawls for Islamic Women and Kris Knives have been sold only to the people who are interested for their products but the numbers of buyers are decreased. Moreover, people do not buy a lot of these products to be stocked.

Expansion of the market by making it nationwide will help the people to have more sales and thus be able to support their family better. With the government help to ensure better new life, the possibility to expand the market is great. The Government’s project called “OTOP”, which stands for ‘One Tambon (Village) One Product’, focuses on manufacturer, distributors and consumers. This project has become the ‘looked-after’ activity by the people. In term of marketing the product, whilst the approach varies, the advertisement and sales and order on-line are the options to be studied.

1.1. COMMUNITY DEVELOPMENT DEPARTMENT (CDD) WEB PORTAL FOR SOUTHERN BORDER PROVINCES OF THAILAND – AN OVERVIEW

Southern provinces of Thailand such as Pattani, Yala, and Narathiwat are the places that are located along the Thai border. Agriculture and related activities are the most common occupation in these areas such as Rubber tapping in the Rubber plantations and Paddy planting in the fields. The indigenous knowledge (Local Wisdom) of the locals that was
