This study examines the relationship between English proficiency, IT knowledge, working experience and accounting anxiety. Data were collected from 85 postgraduate accountancy students registered at Universiti Utara Malaysia, College of Business. Results of this study supported the hypotheses regarding the relationships between English proficiency and accounting anxiety, IT knowledge and accounting anxiety, and general work experience and accounting anxiety. English proficiency appeared to have the greatest impact on the accounting anxiety, followed by IT knowledge and general work experience. The findings suggested that, possessing high English proficiency, IT knowledge and prior general work experience are important to reduce accounting anxiety among postgraduate accounting students. Surprisingly, work experience in accounting did not significantly influence accounting anxiety. This study has implications for practice. Findings of this study are important as accounting anxiety is well known to have negative impact on students’ academic achievement. Therefore, future students must ensure that they possess sufficient English proficiency, IT knowledge and skills, and work experience prior to joining postgraduate accounting programs.

Keywords: English Proficiency, IT Knowledge, Working Experience, Accounting Students and Accounting Anxiety
ACKNOWLEDGMENT

By the Name of Allah, the Most Gracious and the Most Merciful

Alhamdulillah, Praise and gratitude be given to Allah the Almighty for putting forward me such a great strength, patience, courage, and ability to complete this project.

I would like to express my sincere gratitude to my supervisor, Dr. Noor Azizi Ismail, for his intelligent guidance and helpful advice during the whole process. He has really been for me a center of motivation and guidance. I am truly grateful to his continual support and cooperation, as being prepared to assist me all along the completion of the project. Completion the project was impossible without his continuous assistance.

I would like to express deeply and sincerely my gratitude to my parents for their love, affection, trust, and support they have extended me every step of my life. In addition, I would like to present my sincere and profound gratitude to my sisters, and my nice niece, and my close friends for their love, support and encouragements throughout all my life.

Finally, My demonstrative appreciations to all my friends and, everyone who has helped either directly or indirectly to the completion of this project.

CHAPTER 1
INTRODUCTION

1.1 Background of the Study

Accounting education and practices are almost the same around the world. No major differences can be found on the usage of accounting terminologies such as journal, ledger, costing, and book keeping. However, in a world where globalization is rapidly on the rise, possessing global knowledge and skills such as English language, information technology (IT) and across cultural understanding and affinity is increasingly important for accounting education (Doran, Boullion & Smith, 1991).

Therefore, it is interesting to study the experiences of students studying abroad or even within the same border but from the different states as they endeavor to acquire a cross-cultural experience, including the acquisition of an international language such as English, exposure to diverse socializations, and world views, and resulting in an educational experience on scholastic and personal levels (Buckless, Lipe & Ravenscroft, 1991).

Furthermore, some studies into learning within the accounting discipline have indicated that, given the nature of the accounting tasks that build on prior knowledge, and the algorithmic nature of recording transactions, a surface approach to learning is quite common (Biggs, 1994). While several definitions of accounting are available, the definition offered by The Committee on Terminology of American Association of Public
