PERMISSION TO USE

In presenting this thesis in fulfillment of the requirements for the postgraduate degree from the Universiti Utara Malaysia, I agree that the Universiti Library may take it freely available for inspection. I further agree that the permission for copying of this thesis in any manner, in whole or in part, for scholarly purpose may be granted by my supervisor or, in his absence, by the Dean of the Postgraduate studies of College of Business. It is understood that any copy or publication or use of this thesis or parts thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to the Universiti Utara Malaysia for any scholarly use which may be made of any material from my thesis. Request for permission to copy or make other use of material in this thesis in whole or in part should be addressed to:

**Dean of the Postgraduate Studies of College of Business
Universiti Utara Malaysia

Abstract

The main objectives of this study are to investigate there is relationship between perceived usefulness, ease of use and AIS adoption. AIS based on the usefulness and ease of use is the measurement of the technology acceptance. Furthermore, the terms of the likely behavioral and performance changes of technology acceptance are expected to occur through performance applications to business functions of public sector organization in Tripoli of Libya. These changes should be measure through the level of acceptance of technology. At the end, this study has conclusively found answer to all research questions and research objectives and found evident to the hypothesis formulated. The research confirmed the relationship between perceived usefulness and ease of use contribute were positively related to AIS adoption among public sector organization. It provides estimates of the research model and suggests which components of the adoption item will get more successful in AIS adoption. The research models are being pursued in the adoption of technology performance to succeed. The implementation of the examination of AIS adoption presents an opportunity for a performing government to look at its existing programs, services, and processes. Once appropriate metrics have been identified, data collection and tracking processes are put in place, the bank can begin to adjust its practices and evaluate its technology performance over time. A continuous feedback loop is formed, in which the government can use measurement information to re-align initiatives as needed.

Keyword : AIS Adoption, Perceived Usefulness, Perceived Ease of Use.

Acknowledgement

I realize this thesis was done with the help a lot of wonderful and kind people. In the first place I would like to record my gratitude to **Mr. Shahmir Abdullah** for his supervision, advice, and guidance from the very early stage of this research as well as giving me extraordinary experiences through out the work. Above all and the most needed, he provided me unflinching encouragement and support in various ways.

Special thanks to my adorable for my parents. My parents deserve special mention for their inseparable support and prayers. **My father**, in the first place is the person who put the fundament my learning character, showing me the joy of intellectual pursuit ever since I was a child. **My mother**, is the one who sincerely raised me with her caring and gently love.

Also I would like to thanks for my brother, **Abdulhamid**, and all **my brothers** and **sisters** support for helped me to produce this thesis. Furthermore, to **my nephews**, **Mohamed** and **Sayfaldin** with their thoughtful support. Finally, I would like to thank for everybody who was important to the successful realization of thesis, as well as expressing my apology that I could not mention personally one by one.

CHAPTER 1

INTRODUCTION

1.1 Background of the Study

After a period of economic stagnation in the 1990s, development prospects in Libya have now considerably improved. Following the suspension of United Nations sanctions in 1999, the country has begun to benefit from resumed economic growth and a rise in foreign investment. Nonetheless, important development challenges remain. The renewed growth of the Libyan economy following the suspension of United Nations sanctions presents a valuable opportunity to influence positively Libya's development planning and management capacities. Economic diversification is an important need for development in Libya. However, growth in two areas of recognized potential has been disappointing. Accounting information system has been held back by a lack of accountant services, skills and capacity. Meanwhile development of accounting resources has been below the sectors' true potential, due in part to a lack of information and accurate planning.

Libya is the fifteenth biggest oil producer in the world with total proven oil reserves of 39 billion barrels according to Libyan officials, albeit a speculative figure which according to some geologists should be divided by two. However Libya retains an excellent potential for more oil discoveries, and only around 25% of Libya's area is covered by oil agreements. 35 IOCs are at present operating in Libya. Libyan oil production in 2007 reached 1.9 million bbl/d and the objective is 3 million bbl/d by
