PERAKUAN KERJA KERTAS PROJEK
(Certificate of Project Paper)

Saya, yang bertandatangan, memperakukan bahawa
(I, the undersigned, certify that)

ABD. RASHID BIN HJ. SHAFIE

calon untuk Ijazah
(candidate for the degree of) **MSc. (Information Technology)**

telah mengemukakan kertas projek yang bertajuk
(has presented his/her project paper of the following title)

**RELATIONAL DATABASE DESIGN FOR WEB-BASED COMPUTER
INVENTORY SYSTEM JABATAN PELAJARAN NEGERI (JPN) PERAK**

seperti yang tercatat di muka surat tajuk dan kulit kertas projek
(as it appears on the title page and front cover of project paper)

bahawa kertas projek tersebut boleh diterima dari segi bentuk serta kandungan
dan meliputi bidang ilmu dengan memuaskan.
(that the project paper acceptable in form and content, and that a satisfactory
knowledge of the filed is covered by the project paper).

Nama Penyelia Utama
(Name of Main Supervisor): **MR. BAHARUDDIN BIN OSMAN**

PERMISSION TO USE

In presenting this thesis in partial fulfilment of the requirements for a postgraduate degree from Universiti Utara Malaysia, I agree that the University Library may make it freely available for inspection. I further agree that permission for copying of this thesis in any manner, in whole or in part, for scholarly purposes may be granted by my supervisor, in her absence, by the Dean of the Faculty of Information Technology. It is understood that any copying or publication or use of this thesis or parts thereof for financial gain should not be allowed without my written permission. It is also understood that due recognition shall be given to me and to Universiti Utara Malaysia for any scholarly use which may be made of any material from my thesis.

Request for permission to copy or to make use of material in this thesis, in whole or in part should be addressed to:

Dean of the Faculty of Information Technology
Universiti Utara Malaysia
06010 UUM Sintok
Kedah Darul Aman

ABSTRAK

Kajian ini ditumpukan kepada proses rekebentuk pangkalan data inventori berasaskan web untuk Jabatan Pelajaran Negeri Perak ringkasnya JPCIS. Kaedah kajian adalah berlandaskan rekabentuk pangkalan data relational. Melalui kaedah ini, lima fasa telah dikenalpasti dan diikuti iaitu (1) Analisis Keperluan, (2) Rekabentuk Pengkalan Data Konseptual, (3) Rekabentuk Pengkalan Data Logikal (4) Rekabentuk Pengkalan Data Fisikal, dan (5) Prototaip. Keperluan terhadap data oleh JPN telah dikenalpasti melalui proses pemerhatian dan dokumentasi. Model Hubungan-Entiti (ER Model) digunakan untuk mengenalpasti sama ada terdapat perbezaan dalam sesuatu ciri entiti atau persamaan antara satu entiti dengan entiti lain. Terdapat tiga peringkat pengguna dikenalpasti iaitu JPN, PPD dan sekolah. Sebanyak 15 entiti juga dikenalpasti untuk membangunkan pangkalan data ini. Di dalam rekabentuk konsepsual yang dibangunkan, tidak terdapat hubungan antara entity yang berulang. Gambarajah Aliran Data dibina untuk memudahkan proses visualisasi serta untuk menganalisa transaksi. Akhirnya prototaip system inventori berasakan web telah dibina untuk menguji rekabentuk pangkalan data dan menunjukkan ia memenuhi keperluan pengguna.

ABSTRACT

This study was focus on designed database system for web-based computer inventory system for Jabatan Pelajaran Perak namely JPCIS. A methodology is defined for the design of this relational database. The methodology is presented as a systematic guide to the five main phases of database design namely as follows (1) Requirement Analysis, (2) Conceptual Database Design, (3) Logical Database Design, (4) Physical Database Design, and (5) Prototyping. The data requirements are defined and conceptualised using an extended Entity-Relationship Model (ER Model), with the extensions being additional semantics such as relationship, optional relationship, and the generalisation abstractions. There are three categories of users and 15 entities been identified. Cross-Referencing Transaction been used to analyse transactions. The main objective is to understand the functionality of transaction (query) run on the database. In Logical Database Design with involved build and validate local logical design, Data Flow Diagram been drawn to visualized it. Data Flow Diagram been used to analyse transactions. The main objective is to understand the functionality of transaction (query) run on the database. Finally automated prototyping been used to validate the database system and the test shown that it meet the users needs.

ACKNOWLEDGEMENTS

Alhamdulillah, all the praise only for Allah. Unlimited gratitude and thanks to Mr. Baharuddin Osman, for his assistance, patience, invaluable guidance, ideas and encouragement in order to complete this thesis. I would also like to thanks to all the lecturers from the Faculty of Information Technology of Universiti Utara Malaysia (UUM) that for educates me with lot of IT information's, inputs, guidance and lectures during my study. Only Allah can repay all your kindness.

I also wish to thank the Malaysian Ministry of Education for allowing me to undertake this study. To all the staffs from IT Unit, Perak Education Department and all PPD's especially Mr. Hamdan, Mr. Nazri, Mrs. Hajjah Faridah, Miss Azlin, Mr. Ahmad Nazri, I like to express my unlimited gratitude. All the support from my JPN and UUM friend for all these time shall remain in my mind as long as I live.

Last but not the least, to my dearest and lovely mother and late father, this is a present for giving birth and educates me until I have become an educated person. For my lovely wife Nur Natasha, Syidkin, Fiqah, Nabil, Popo, and Ayee I really appreciated all your sacrifices and full support. I could not have done this without all of you. I will always remembered your word "Ayah, bila balik?" ever since I'm at beautiful and peacefully jungle of Sintok.

DEDICATION

To my wife Nur Natasha Lee,
my son, Nabil Anwar,
my daughters Nur Ashidkin Nabila and Nur Afiqah Nabila,
for their love, patience, and support.

CHAPTER 1: BACKGROUND OF THE STUDY

1.1 Introduction	1
1.2 Problem Statement	2
1.3 Research Objective	3
1.4 Significance of the Research	4
1.5 Scope and Limitation of the Study.....	5

CHAPTER 2: LITERATURE REVIEW

2.1 Introduction	6
2.2 Database System	6
2.1 Database	6
2.2 Database Management System (DBMS)	7
2.3 Data Model	11
2.4 Database Design	12
2.5 Inventory System	13

CHAPTER 3: METHODOLOGY

3.1	Introduction	20
3.2	Research Methodology	21
3.3	Approaches to Database Design	23
3.4	Prototyping	24

CHAPTER 4: RESULTS AND FINDINGS

4.1	Introduction	26
4.2	Requirement Analysis.....	26
4.3	Organisation Background	27
4.4	Department Operations	28
4.5	ICT Objective of JPN Perak	29
4.6	Current Process of Data Collections	30
4.7	The JPN Perak Network	30
4.8	Organisation Requirement	30
4.9	System Requirement	36
4.9.1	Initial Database Size	37
4.9.2	Database Rate Growth	37
4.9.3	Security	38
4.10	System Specifications	38
4.11	The Functionality of Web-base Application	40
4.12	View Point	41
4.13	Data Requirement	45
4.13.1	Computer Inventory	45
4.13.2	School Profile	46
4.13.3	PPD Profile	46
4.13.4	JPN Profile	47

4.13.5	Inventory Type	47
4.13.6	Inventory Status	48
4.13.7	Inventory Location	48
4.13.8	School Location	48
4.13.9	School Type	49
4.13.10	Units of JPN	49
4.14	Transaction Requirement	49
4.14.1	Data Entry	49
4.14.2	Access Level	50
4.14.3	Data Insertion, Modification, Deletion and Retrieval.....	50
4.14.4	Data Queries	51

CHAPTER 5: CONCEPTUAL DATABASE DESIGN

5.1	Introduction	52
5.2	Nine Steps for Designing Conceptual Database	52
5.3	Identified Entity Types	53
5.4	Identified Relationship Types	54
5.5	Identified and Associate Attributes with Entity Name Or Relationship	55
5.5.1	Attribute for Entity	56
5.5.2	Determine Attribute Domains	56
5.5.3	Document Attribute Domains	56
5.6	Determine Candidate and Primary Key Attribute.....	56
5.7	Enhanced Modeling ER Diagram	57

5.8	Check Model for Redundancy	58
5.8.1	Re-examine One-to-One (1:1) Relationship	59
5.8.2	Removed Redundant Relationship	59
5.9	Validate Local Conceptual Model against User Transaction	59

CHAPTER 6: LOGICAL DATABASE DESIGN

6.1	Introduction	61
6.2	Objective	61
6.3	Build and Validate Local and Global Logical Data Model	62
6.4	Remove Features Not Compatible with the Relational Model	63
6.5	Derive Relations View Logical Data Model	64
6.6	Validate Relations against User Transaction	65
6.7	Define Integrity Constraint	66

CHAPTER 7: PHYSICAL DATABASE DESIGN

7.1	Introduction	69
7.2	Steps for Designing Physical Database	69
7.2.1	Design Base Relation	70
7.2.2	Enterprise Constraint	70
7.3	Design Physical Representation	71
7.3.1	Analyse Transaction	72

7.3.2	Choosing File Organisation	73
7.3.3	Choosing Indexes	74
7.3.4	Estimate Requirement Disk Space	75
7.4	Design User View	76
7.5	Design Security Measurement	77
7.5.1	System Security	77
7.5.2	Data Security	78
7.5.3	Verified User According to Username, Password and Access Level	78

CHAPTER 8: PROTOTYPING

8.1	Introduction	80
8.2	Building the Database	80
8.3	Users Authentication	82
8.4	Identified List of Inventories	82
8.5	Identified List of Inventories Status	83
8.6	Identified Locations of Inventory at School	83
8.7	Total Number of Inventory According JPN	84
8.8	Reports for List of Details PPD Inventories and Status ...	84
8.9	Reports for List of Inventories According to School	85
8.10	Data Integrity of Inventory Serial Number	85
8.11	Data Integrity of Redundancy	86
8.12	List of SQL	86
	Conclusion	91

CHAPTER 1

BACKGROUND OF THE STUDY

1.1 Introduction

An important aspect of most every organisation and enterprise is record keeping. All kinds of data, from emails and contact information to inventory data, are stored in some form of a database. The problem with data is that it changes. Information Technology (IT) management is still an important issue in Ministry of Education (MOE), State Education Department (JPN), District Education Office (PPD) and especially in schools. The main aim of IT management is to supply an accurate, precise, past and reliable source of information. Unfortunately there are still areas where problems arise where by some of the inventory system used today referred is based on a manual filing system. Data collection through out entire schools had been collected using paper form. It still the main part of the organisation mention above to continue their operations till today.

Furthermore, this manual data collection refers to non-standardised format, which will cause difficulty in mining and analyzing existing data to produce information and reports for policy decision makers. A standard collection of data that refers to the same data dictionary using web-based system can reduce the problems mention above.
