PERMISSION TO USE

In presenting this thesis in partial fulfillment of the requirements for a postgraduate degree from Universiti Utara Malaysia, I agree that the University Library may make it freely available for inspection. I further agree that permission for copying of this thesis in any manner, in whole or in part, for scholarly purpose may be granted by my supervisor(s) or, in their absence by the Dean of the Research and Postgraduate Studies, College of Business. It is understood that any copying or publication or use of this thesis or parts thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to Universiti Utara Malaysia for any scholarly use which may be made of any material from my thesis.

Requests for permission to copy or to make other use of materials in this thesis, in whole or in part, should be addressed to

Dean of Research and Postgraduate Studies

College of Business

Universiti Utara Malaysia

06010 UUM Sintok

Kedah Darul Aman.

ABSTRACT

This study evaluates the performance of Islamic banks and analyzes the determinants of their profitability and performance as measured by return on assets (ROA), return on equity (ROE) and profit margin (PM). Using financial ratios as a proxy for internal bank characteristics, and utilizing bank level data, this study examines the performance indicators of foreign and domestic Islamic banks in Malaysia during 2006-2007. Regression results show that Islamic bank profitability measures respond positively to total core deposits, and total assets; and negatively to capital adequacy ratio. Ratios of operating expenses to assets and financing provisions to total financing positively affect Islamic bank's ROE and PM, while negatively affect ROA. Regression and correlation results reveal no significant relationship between the type of Islamic bank (foreign or domestic) and the profitability measures. The *t*-test for equality of means results shows that domestic Islamic banks are more profitable and more efficient, but riskier and less liquid than foreign Islamic banks. Asset quality indicators for foreign Islamic banks are better than those of domestic Islamic banks.

ACKNOWLEDGEMENT

To my parents, without your continual support throughout my life and academic career I could not be where I am today. You have instilled in me a love of learning that will last for the rest of my life. Without it, I would not have had the motivation to always work harder and strive for nothing less than perfection. For that I am very thankful.

I would like to express my appreciation to my supervisor, Assoc. Prof. Norafifah Ahmad, for the important role that she played in the development of this project from start to finish. Her ideas, guidance and care have been enormously helpful and supportive in accomplishing this dissertation.

CHAPTER ONE

INTRODUCTION AND BACKGROUND FOR RESEARCH

1.0 Introduction

In recent years, many banking systems in emerging markets have experienced a deep transformation under the pressure of internal financial liberalization, increased openness to international capital flows, and technological and financial innovation. Banking crises, often requiring large-scale government intervention and bank closures, also opened the way for structural change. Among these transformations, an important one has been the increasing presence of foreign banks in the domestic banking system. While foreign bank entry in emerging markets has been substantial overall, it has also been uneven; with some countries maintaining substantial barriers and others allowing foreign banks to achieve a dominant position (International Monetary Fund, 2000).

In today's world, bankers and their competitors are under great pressure to perform well all the time. In this case, performance refers to how adequately a financial firm

The contents of

only

should also be investigated. Other aspects such as marketing, services and products development could be considered in the performance analysis.

The scope of the analysis could be broadened to consider Islamic investment banks in Malaysia in addition to consider the central bank of Malaysia-BNM Islamic money market operations. The scope of the analysis could also be broadened to consider Islamic banks in other Muslim countries and to make comparisons between Islamic banks across countries.

Finally, because in today's world the global financial system, in particular, the global banking system extremely suffers from the financial turmoil and crisis, it would be interesting to examine whether the financial ratios presented in this research could be used for risk assessment, forecasting bank profitability, or providing early warning signals of banking problems in various countries.

5.4 Summary

This chapter reviewed and summarized the findings of the research. The findings are outlined into descriptive statistics findings, correlation analysis findings, regression analysis findings, and findings on comparison between foreign and domestic Islamic banks. Recommendations as well as suggestions to further refine future research are mentioned this chapter.
