

**DESIGN AND DEVELOP VIRTUAL MOBILE VOTING
APPLICATION BASED AGENT CLASSIFICATION FOR
UNIVERSITY CAMPUS**

**A thesis submitted to Faculty of Information Technology in partial
fulfillment of the requirements for the degree Master
(Information and Communication Technology),**

Universiti Utara Malaysia

By

MUBARK, WALEED HASSAN S. (802997)

OK.
Please give Mr. Waleed
the red form. TQ.
26/4/10.

PERAKUAN KERJA KERTAS PROJEK
(Certificate of Project Paper)

Saya, yang bertandatangan, memperakukan bahawa
(I, the undersigned, certify that)

MUBARK, WALEED HASSAN S.
(802997)

calon untuk Ijazah
(candidate for the degree of) **MSc. (Information Communication Technology)**

telah mengemukakan kertas projek yang bertajuk
(has presented his/her project paper of the following title)

DESIGN AND DEVELOP VIRTUAL MOBILE VOTING APPLICATION BASED
AGENT CLASSIFICATION FOR UNIVERSITY CAMPUS

seperti yang tercatat di muka surat tajuk dan kulit kertas projek
(as it appears on the title page and front cover of project paper)

bahawa kertas projek tersebut boleh diterima dari segi bentuk serta kandungan
dan meliputi bidang ilmu dengan memuaskan.
(that the project paper acceptable in form and content, and that a satisfactory
knowledge of the field is covered by the project paper).

Nama Penyelia Utama
(Name of Main Supervisor): **ASSOC. PROF. HATIM MOHAMAD TAHIR**

PERMISSION TO USE

In presenting this project of the requirements for a Master of Science in Information and Communication Technology (MSc. ICT) from Universiti Utara Malaysia, I agree that the University library may make it freely available for inspection. I further agree that permission for copying of this project paper in any manner, in whole or in part, for scholarly purposes may be granted by my supervisor or in their absence, by the Dean of Graduate School. It is understood that any copying or publication or use of this project or parts thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to Universiti Utara Malaysia for any scholarly use which may be made of any material from my project paper.

Request for permission to copy or make other use of materials in this project, in whole or in part, should be addressed to:

Dean of Graduate School

Universiti Utara Malaysia

Kedah Darul Aman

Malaysia

*Dedicated to my father Hassan s. Mubarak, my mother, my brothers,
my sisters, and to my beloved wife ...*

ABSTRACT

Today's, mobile applications have brought the different advantages for accessing and sharing information over wireless application protocol (WAP). There are difficulties for accessing and searching information especially in the rural communities. Hence, the study aimed to develop a mobile application for accessing and retrieving user queries over WAP technology. Moreover, the proposed application will provide users in rural communities with their request information about different events, such as (News, clinics, stations, and other events). Furthermore, Application Development Modified Methodology (Charles, 1995) has been used for building the proposed application. Finally, the proposed application has been evaluated and the obtained results have been produces.

ACKNOWLEDGEMENTS

Praise to Allah for his guidance and blessing for giving me the strength and perseverance to complete this project. I would foremost like to thank my parents, for providing me with the opportunity to pursue my goals and for their love and affection, which has helped me through the most trying times. Equal gratitude goes out to my siblings and brothers and my wife. I would like to thank my supervisor: Assoc Prof. Hatim Mohamad for his guidance and constant motivation that has enabled me to complete my project work. Moreover, I would also like to thank him for the opportunities that he has made available to me.

MUBARK, WALEED HASSAN / 18-4-2010

Chapter One

Introduction

1.0 Introduction

The mobile services became the most important services that occupy most of our daily works on the wireless and other available facilities. Mobile services give us the facilities to practice our daily activates such as learning, business, and reservation.

However these systems can supply the voter about the altering discussion by giving the voter a brief information about the voter enquire, for preventing voters from the election, which need to make the voter believe that everything works correctly, and in many situations the voter in the altering discussion need to extracting to the attacker value that make him or her able to track the online voting ability (Elalf, 2005; Intel Corporation, 2007).

The current enhancement in the mobile services and networking for existing programs and applications has presents the opportunities for multiple collaboration among distributed groups of people by providing a means for gathering preferences and opinions across time and space (Shafir, E., et al., 2000). Furthermore, the new
