PERMISSION TO USE

In presenting this thesis in partial fulfillment of the requirements for a postgraduate degree from Universiti Utara Malaysia, I agree that the University library may make it freely available for inspection. I further agree that permission for copying of this thesis in any manner, in whole or in part, for scholarly purposes may be granted by my supervisor(s) or, in their absence, by the Dean of the Graduate School. It is understood that any copying or publication or use of this thesis or parts thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to Universiti Utara Malaysia for any scholarly use which may be made of any material from my thesis.

Requests for permission to copy or to make other use of materials in this thesis, in whole or in part, should be addressed to:

Dean of Academic Affairs

ABSTRACT

The focus of this study is to get a good requirement model for Student Attendance Monitoring Systems (SAMS) in secondary school. It is aimed at system designer who want to know how to design an efficient SAMS. Methodology was used for this study requirement modelling process. The methodology comprises four main phases: requirements elicitation, requirements analysis, requirements management and requirements verification. At the end of this study, a SAMS prototype were designed based on the requirement model. User acceptance testing was conducted to examine user’s satisfaction.
ACKNOWLEDGEMENT

Alhamdulillah, praise to Allah S.W.T. for giving me strength physically and psychologically to complete my thesis. It is my pleasure acknowledges to everyone who helped me explicitly and implicitly. First of all, I would like to thanks and give my warmest appreciation to my beloved parents, Tuan Haji Mohd Amin Mohd Jali and Puan Hajah Puteh Zawiyah Mohd Alias and my siblings who always encourage me complete duty on time. Special thanks to Universiti Utara Malaysia and its staff for giving me knowledge and opportunity to make my study meaningful. To my supervisor Mr. Samsu Sajat that has gave me guidance and supports in completing this thesis. To all people from S.M.K. Malim Nawar, S.M.K. Kampar, S.M.K. Sri Kampar and S.M. ACS Kampar, thanks for your cooperation. And not forgetting to all my friends that have been helping and supporting me throughout the entire duration of this semester, thanks for your kindness.

CHAPTER 1

PROJECT OVERVIEW

1.1 Introduction

In schools, attendance is important and mandatory. Nowadays, due to large number of students, it is efficient to use School Attendance Monitoring System (SAMS) to manage attendance in secondary schools. In recent years, system developers and designers have expands many ways and characteristics in design a good system.

A requirement model helps system developers or designers to understand what characteristic must have. Techniques for requirement modeling include process modeling, dataflow diagramming, entity relationship modeling and others.
The contents of the thesis is for internal user only
