PERMISSION TO USE

In presenting this thesis in partial fulfillment of the requirements for a postgraduate degree from University Utara Malaysia, I agree that the University Library may make it freely available for inspection. I further agree that permission for copying of this thesis in any manner, in whole or in part, for scholarly purpose may be granted by my supervisor(s) or, in their absence by the Dean of the Graduate School.

It is understood that any copying or publication or use of this thesis or parts thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to University Utara Malaysia for any scholarly use which may be made of any material from my thesis.

Requests for permission to copy or to make other use of materials in this thesis, in whole or in part should be addressed to:

Dean of Graduate School
University Utara Malaysia

Kedah Darul Aman.
Abstract

Most stock exchanges provide stock price quotation through market watch service. Since stock prices change every second; investors have to observe the change throughout the trading session in order to make the right decision at the appropriate moment. However, accessing this service has limitation, where it is only available through the brokerage firms’ screens as well as online computer. Since there is a tremendous need to access information regarding the stock prices, an alternative way of accessing the information is required. This arises when the investors are not able to be at the brokerage firm, or contact their brokers or access the information about the stock through online computer. Mobile technology and wireless communication have been identified as potential alternatives since they are able to fulfill the need of the investors through ubiquitous service. This study discusses a prototype Mobile-Based Stock Exchange (MBSE) and simplifies ubiquitously accessing online stock exchange through mobile devices. MBSE was developed for stock exchange market watch. The results of user evaluation on the MBSE indicate that it has been rated highly in terms of The Usefulness, Ease of Use, Information Quality, Functionality, Interface Quality, Design/Layout and Outcome/Future Use. Moreover, the results also indicate that there is no significant difference between novices and experts for MBSE users in most measured dimensions.
Dedication

I humbly thank Allah Almighty, the Merciful and the Beneficent, who gave me health, thoughts and co-operative people to enable me achieve this goal...

I wish to dedicate this work to Holy Prophet Muhammad (Peace be upon him) and his companions who laid the foundations of Modern civilization and paved the way for social, moral, political, economical, cultural and physical revolution...

To my supervisor (Prof. Abdul Nasir Zulkifli), who always stood beside me and helped me to do my best, for the time he spent to teach me, I will still his student along my life...

To my dear parents and for their never ending moral support and prayers which always acted as a catalyst in my academic life...

To my lovely wife (Samar), my sons (Ahmad, Ismail) and my daughter (Marah) who have endured my absence during my study and they were always pray for me and encourage me to do my best.
ACKNOWLEDGEMENT

At the beginning, I thank Allah for helping me in my study and guiding me to continue what I have started in my educational life. I thank Allah in every day for giving me the ability and motivation to continue this work.

After thanking Allah, I would like to convey my regards to my supervisor Assoc.Prof. Abdul Nasir Zulkifli for the benefit and precious information that he gave me as one of his students. I thank and honor him for helping me to complete my study in a good way.

Finally, I would like to say thankfulness word for the lecturers in the Information Technology Department at University Utara Malaysia (UUM)...

Thank you UUM.

IX
CHAPTER 1

INTRODUCTION

1.1 Background

Today's stock exchanges' operation has become highly organized trading market. Investors who wanted to trade securities must do it through a brokerage firm which pays to own a seat on the exchange (Khandelwal, 2007). Most stock exchanges established as floor exchanges, where it was face-to-face trading to make a deal. The New York Stock Exchange (NYSE) is the largest stock exchange in the world, continues to function in this way, but now, most of the world's stock exchanges have become fully electronic (Stoll, 2006).

Electronic systems provide the market watch on the screens, where the market trend would be observed through brokerage firms or through the Internet. A new "visuality" turns the stock market to an entity of knowledge consumption. Wonderful art of the screen's design turned the market into an interactive representation on the surface. On the computer screen, the market becomes an entity of constant movement and variation. Fluctuation and changing direction change its appearance at any time. Continuing with the online investment is a function of the functions of the investor's reflectivity, which needs to observe the market's motion to make his own decision successfully (Zwick & Dholakia, 2006).
