Abstract

The purpose of this study was to investigate employee’s reaction towards resistance to change. Another aim was to find out their self efficacy characteristics towards change. The study was conducted in Pacnet Global (M) and questionnaires were sent out to 108 samples and all responses were received. The results of the study were that resistance to change negatively related to Pacnet Global (M) employees as most of them happy with the change. It was discovered that there are some employees plausible resist changing. The principal conclusion was that resistance to change is all depending on a individual perspective and their personal behavior.

Acknowledgement

First and foremost, I would like to express my sincere gratitude to my supervisor Dr. Chandrakant Subramaniam for the continuous support of my theses study, for his patience, motivation, enthusiasm, and immense knowledge. His guidance helped me in all the time of research and writing of this thesis. I could not have imagined having a better advisor and mentor for my Masters Theses study.

During this work I have collaborated with many colleagues for whom I have great regard, and I wish to extend my warmest thanks to all those who have helped me with my work in the Pacnet Global (M).

Last but not the least; I would like to thank my family members. Without their encouragement and understanding it would have been impossible for me to finish this work. My special gratitude is due to my mother and my sisters for their loving support.

CHAPTER 1

INTRODUCTION

1.1 Background of the study

Business in this new millennium will continue to increase their growth and expand their organization as such this environment forces employees and managers to deal with constant change. Globalization, increased competition, international expansion and restructuring are the challenges faced daily. Success in dealing with this kind of scenarios is depends on the organization’s ability to adapt the change.

Change means an event that occurs when something passes from one state or phase to another, which has been indicated in the Oxford dictionary, Oxford Paperback Dictionary Thesaurus (2001). Change management is a structured approach to transitioning individuals, teams, and organizations from a current state to a better state. A common definition used for change management is a set of processes that is employed to ensure that significant changes are implemented in controlled and systematic fashion to effect the organizational change (Wikipedia, 2009).

One of the goals of change management is with regards to the human aspects of overcoming resistance to change in order for organizational members to buy into change and achieve the organization's goal of an orderly and effective transformation (Tech Faq, 2009). In order for change to occur
