PERMISSION TO USE

In presenting this project in partial fulfillment of the requirements for a postgraduate degree from Universiti Utara Malaysia, I agree that the University Library may make it freely available for inspection. I further agree that permission for copying of this project in any manner, in whole or in part, for scholarly purpose may be granted by my supervisor(s) or, in their absence by the Dean of Postgraduate Studies and Research. It is understood that any copying or publication or use of this project or parts thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to Universiti Utara Malaysia for any scholarly use which may be made of any material from my project.

Requests for permission to copy or to make other use of materials in this project, in whole or in part, should be addressed to

**Dean of Postgraduate Studies and Research
College of Arts and Sciences
Universiti Utara Malaysia
06010 UUM Sintok
Kedah Darul Aman
Malaysia**

ABSTRACT

Location is the main important thing for an accommodation-seeker who is looking for a place for rent or to buy a property. Searching for rental accommodation can be a difficult and frustrating process. Many hours or days must be spent searching through numerous disparate sources of property advertisements in order to locate suitable candidates. This problem mostly facing the international students in Malaysia when they are searching for rental accommodation. Researcher aim to provide just such support with GVERGM system for rental property recommendation using Google Maps to solve this problem, currently focused on international students in Malaysia.

ACKNOWLEDGEMENT

By the Name of Allah, the Most Gracious and the Most Merciful

First, I would like to express my appreciation to ALLAH, the Most Merciful and, the Most Compassionate who has granted me the ability and willing to start and complete this study. Also, I would like to thank my supervisor MDM: NURULHUDA BINTI IBRAHIM for her advice and supervision during the preparation of this project. I would like to thank all my instructors in the College of Arts and Sciences in the University Utara Malaysia (UUM) for their support.

I dedicate this humble work to my mother and father; the spring of loyalty, affection, and dedication. They raised me on the principles of virtue; to my dear brothers my wife and my sister who spared no effort in helping me during my school years.

Salem S. M. Khalifa

CHAPTER 1

1.1 Introduction

According to Wiley and Ltd, (2006); Odlyzko, (2001) the Internet has really become in latest years as a source of properties for rent and sale. The web site interface provides a mechanism for customers to search for/access content, conduct transactions, and to communicate and also provides a real-estate location along with the areas landmarks using technology of Geographic Information System (CHENG et al., 2009).

1.2 Problem Statement

One of the most important issues for international students who are studying in UUM at Sintok is to find a place near by the university to stay stable and comfortable. Most students who are looking for estates for rent are using news papers where they get only ordinary information without any further details like a general location and estate description. So students have to keep track more than one news papers' classifications, which are inefficient techniques due to it requires much effort in searching and consumes more time and money (Hurley & Wilson, 2001).

Before international students start looking for the housing, they need to have a clear idea of what type of rental property they are looking for (Wiley & Ltd, 2006). Looking for the housing, mostly is decided according to the type of apartment building or Town house,
