PERMISSION TO USE

In presenting this project paper in partial fulfilment of the requirements for a Post Graduate degree from the Universiti Utara Malaysia (UUM), I agree that the Library of this university may make it freely available for inspection. I further agree that permission for copying this project paper in any manner, in whole or in part, for scholarly purposes may be granted by my supervisor or in their absence, by the Assistant Vice Chancellor of the College of Business where I did my project paper. It is understood that any copying or publication or use of this project paper or parts of it for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to the Universiti Utara Malaysia (UUM) in any scholarly use which may be made of any material in my project paper.

Request for permission to copy or to make other use of materials in this project paper in whole or in part should be addressed to:

Assistant Vice Chancellor

ABSTRACT

Much attention has been focused on relationship between office ergonomics practices and job performance. However, relatively limited studies focus on library area especially in Malaysia. The purpose of this study is to examine whether all five independent variables influence job performance among 140 UiTM Shah Alam librarians. Data were gathered through questionnaires and was being analyzed by using Statistical Package for Social Science (SPSS) version 12.

Based on the analysis it was found that factors that contributes to the existing of ergonomics program, ergonomics practices, ergonomics practices in workspace design, ergonomics practices in office equipment and level awareness of office ergonomics practices each made significant contribution independent variables. Hierarchically, these four independent variables are found to be among the strongest variables to compliance with job performance in this organization. Recommendations and implications for future research and practice were also discussed.
ABSTRAK

Meskipun kajian tentang hubungan di antara amalan ergonomik pejabat dan prestasi kerja di dalam organisasi telah banyak dibuat, namun kajian sebegini sangat terhad diterokai di perpustakaan terutama di Malaysia.

Hasil daripada analisa data, empat pemboleh ubah tidak bersandar iaitu faktor-faktor yang menyumbang kepada pengwujudan program ergonomik, jenis-jenis amalan ergonomik terhadap rekabentuk ruang kerja, jenis-jenis amalan ergonomik terhadap peralatan pejabat dan tahap kesedaran amalan ergonomic masing-masing menjadi penyumbang petunjuk yang paling kuat dan mempunyai hubungan positif dengan pematuhan terhadap prestasi kerja.

Cadangan dan implikasi untuk kajian lanjut juga dibincangkan.
ACKNOWLEDGMENT

In the name of Ailah, the Most Beneficent, the Most Merciful and peace be upon our Prophet Muhamad S.A.W. I would like to take this opportunity to extend my utmost gratitude and sincere appreciation to the following peoples that had made this day a realization. The project had been successfully completed with their helps whether directly or indirectly. My deepest appreciation and thankful go to my supervisor Dr. Chandrakant Subramaniam. With his endless effort, dedication, patience, advice and support this thesis could possibly comply with the date line.

My sincere appreciation goes to the respective individual concerned at UiTM Shah Alam, Selangor especially Encik Mohamad Hamidi Mohd Jais, Senior Library for his support and assistance to gather the data for this research.

Also, my thanks and gratitude goes to my dear hubby, Encik Mohd Isa Khamis who has continued to have unwavering support, even in the face of ongoing changes and hold up. Without his endurance, encouragement, love and support and willingness to put up with the stresses, the attainment of this goal would not have been possible or even desirable.

CHAPTER 1

INTRODUCTION

1.1 Background of the Study

People in any organizations are greatest asset and resource. Lee and Miller (1999) found that a dedicated and talented workforce may serve as a valuable, scarce, non-imitable resource that can help organizations execute an appropriate positioning strategy. An organization is productive if it achieves its goals and by transferring to outputs and the lowest cost.

Ahmadi (2009) mentioned organizations that are able to create a positive environment and make their employees happy will have more productive employees. In general, productivity is a measure of the output of goods or services relative to the input of labor, capital and equipment. The more productive of an industry, the better its competitive position because its unit costs are lower. When productivity increases, businesses can pay higher wages without boosting inflation.

According to Sarmiento and Beale (2007), productivity in every manufacturing company depends on many variables. Some of these variables are associated with a more adequate managing and planning of structural issues (for example,
