PERMISSION TO USE

In presenting this thesis in fulfillment of the requirements for the postgraduate degree from the Universiti Utara Malaysia, I agree that the Universiti Library may take it freely available for inspection. I further agree that the permission for copying of this thesis in any manner, in whole or in part, for scholarly purpose may be granted by my supervisor or, in his absence, by the Dean of the College of Business. It is understood that any copy or publication or use of this thesis or parts thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to the Universiti Utara Malaysia for any scholarly use which may be made of any material from my thesis.

Request for permission to copy or make other use of material in this thesis in whole or in part should be addressed to:

Dean (Research and Post Graduate)

ABSTRACT

Information has become a key resource of most organisations, economies, and societies. Indeed, an organisation's basis for competition has changed from tangible products to intangible information. It is therefore, this study attempts to elicit the relationship between accounting information system and organizational change among 25 companies in the country of Libya. The descriptive research design used a quantitative instrument to accomplish the objectives of the study, employing an adopted questionnaire as an instrument. However, the analysis of the results indicated that most of the respondents agreed on that commitment to change have the positive impact on AIS. In addition, a positive correlation existed between the respondents' gender and their education level. The results further revealed a negative correlation between the respondents' working experience and their attitudes or commitment. A major conclusion of the study was that, Internet Technology adoption among Libyan users still as main focus to predict the success of the business and activities in the organizations in the dynamic environment.
Acknowledgment

In the name of Allah the Most Gracious and The Most Merciful

All praise and due are to Allah and peace and blessings be upon His Messenger

Praise is to Allah the most exalted whose mercy and blessing have enabled me to complete this study. I owe my deepest gratitude to those who have helped me through the process of completing this dissertation. It is a pleasure to thank those who made this thesis possible.

I would like to express my deepest gratitude and appreciation to my supervisor, Dr. AbdulManaf Bin Bohari for his acceptance to be my supervisor, and for providing me with insightful and valuable comments. He has always been there whenever I needed his help and support.

My heartfelt thanks are extended also to the academic and non-academic staff of the University for their Most Helpful Assistance.

Lastly, my warmest thanks, appreciation, and gratitude are due to my dear parents for their support, patience and prayers. And for you my exemplar, Dr. IhssnAbobker Abdul Samad for being my inspiration due to my academic journey.

CHAPTER ONE

INTRODUCTION

1.0 background of the study

Accounting is at the centre of a renaissance in line with technological changes, globalisation, and growing risk management concerns. Today’s organisations are operating and competing in an information age. Information has become a key resource of most organisations, economies, and societies. Indeed, an organisation’s basis for competition has changed from tangible products to intangible information. More and more organisations believe that quality information is critical to their success (Wang et al., 1998). Managers understand that good business results come from dynamic processes, procedures and practices, which is well designed and implemented properly and managed. The past two decades have witnessed considerable change in managerial accounting practice. From its traditional emphasis on financially oriented decision analysis and budgetary control, managerial accounting has evolved to encompass a more strategic approach that emphasizes the identification, measurement, and management of the key financial and operational drivers of shareholder value (International Federation of Accountants, 1998; Institute of Management Accountants, 1999).

A critical research issue in the fields of accounting and management decision-making concerns the fit of the accounting information system (AIS) with the organizational requirements for change. Shields (1997) and Scapens (1999) argue that changes in the environment cause changes within organizations, which in turn
The contents of the thesis is for internal user only
