ABSTRACT

This paper examines the extent level of expropriation of minority shareholders’ rights in Malaysia. The study aims to investigate whether the following variables influence the expropriation of minority shareholders’ rights in Malaysia. Analysis of 60 companies listed from two industries in Bursa Malaysia was selected. Descriptive analysis and ordinary least squares (OLS) regression model are performed in this study. From six variables that are tested only three variables can be concluded as factors influencing the expropriation of minority shareholders’ rights in Malaysia. The number of independent outside directors increases the potential for expropriation of minority shareholders' rights. However, this relationship became opposite when the directors have a different characteristic among boards that affect their independence level. Profitability and growth are highly correlated. When the model is estimated using either one of them, the result is significantly negative, which means that profitable or growing firms have less incentives to engage in related party transactions (RPT). Ownership concentration, level of leverage and size are not significant in explaining the level of expropriation of minority shareholders in RPT.
ACKNOWLEDGEMENT

All praise is to Allah S.W.T., The Most Gracious and Most Merciful who has given me the strength, ability and patient to complete this project paper. All perfect praises belong to Allah alone, Lord of the world. May His blessing be upon Prophet Muhammad S.A.W and the members of his family. I would like to express my utmost gratitude to my supervisor, Dr. Rohaida Binti Abdul Latif and my reviewer Dr. Kamarun Nisham Bin Taufil Mohd, who has guided me throughout this study. Without their help and effort, the preparation of this paper would not have been completed so smoothly. My sincere appreciation given to all the lecturers in Universiti Utara Malaysia (UUM), that have provided me with invaluable knowledge and experiences during my study at UUM. Last but not least, my special thanks to those who have contributed and supported me in completing this dissertation. Most of all to my beloved family, especially my parents who are the greatest person in my life, thank you for the endless love and encouragement that they have given. Thank you.

CHAPTER ONE

INTRODUCTION

1.1 Background of the Study

Companies might engage in related party transaction because it offers many returns to their company. One of the returns is acquiring and disposing of substantial assets among the related parties. Related party relationship exists when parties are considered to be related if one party has the ability to control the other party or exercise significant influence over the other party in making decision. Related party transaction can also be a business deal or arrangement between two parties who are joined by a special relationship prior to the deal. According to Bursa Malaysia, related party transaction is defined as a transaction entered into by the listed issuer or its subsidiaries which involves the interest, direct or indirect, of a related party.

Nevertheless, related party transactions are often viewed as being detrimental to outside shareholders. Officers, directors and large shareholders are well positioned to use their influence to enter into transactions that expropriate wealth from outside shareholders (Ryngaert, 2007). Even, the misalignment of goals and objectives frequently occurs between the majority and minority shareholders and not from the diverse interests of management and owners (Santiago and Brown, 2007). Furthermore, the minority shareholders would be viewed as an unnecessary burden, an uninteresting weight by majority shareholders.
