PERMISSION TO USE

In presenting this thesis in fulfillment of the requirement for the degree of Master of Science (Management) from Universiti Utara Malaysia, I agree that the University Library may make it freely available for inspection. I further agree that permission for copying of this thesis in any manner, in whole or in part, for scholarly purposes may be granted by my supervisor, Shahmir Sivaraj Bin Abdullah, or in his absence, by the Assistant Vice-Chancellor of College of Business. It is also understood that any copying or publication or use of this thesis or part thereof for financial gain shall not be allowed without any written permission. It is also understood that due recognition shall be given to me and to Universiti Utara Malaysia for any scholarly use which may be made of any material from this thesis.

Request for permission to copy or to make other use of material in this thesis, in whole or in part, should be addressed to:

Assistant Vice-Chancellor

ABSTRACT

The challenge before Bangladesh today is how to make her existing SMEs compete with their equal-level rivals from abroad by modernizing themselves with up-to-date technologies and production processes. Along with that comes the question of how to develop the culture and practice of setting up new industries able to thrive in global competition right from the beginning. Globalization, as one knows, has not only challenges but also enormous opportunities for those who have the capability of utilizing them. For them to the most important issue will be choice of correct technology. The main purpose of this study is to investigate the impact of information system in SMEs performance in Bangladesh. To accomplish this objective sample has been selected from industrial area in Dhaka Bangladesh and questionnaire was distributed to the respondents. There is positive relationship has found among ease of use, skills and knowledge and information quality with SMEs performance in Bangladesh.
ACKNOWLEDGEMENT

First and foremost, I express special thanks to my lecturer Shahmir Sivaraj Bin Abdullah guided me throughout the semester to complete this study. He has given his constructive suggestion, guidance, encouragement, and consistent support to me to develop this study. Furthermore, I am deeply conveying my thanks to my friends who helped me to develop this study. I convey my special gratefulness to my God. Finally, I express my deep sense of gratitude to my parents for their timely counseling and guidance. This has enriched my knowledge and has provided insight to overcome the hurdles on the way to complete this project.

With profound regards to all scholars of management studies in past, present and future.

CHAPTER ONE
INTRODUCTION

1.0 Background of the Study

The economy of Bangladesh is at the crossroads. Rapid liberalization has put most existing industries under severe strain because of their inability to compete with consumer goods being freely imported after the withdrawal of quantitative restrictions and the drastic reduction of import tariffs. Some producers have been successful in improving their products and significantly increasing external market access, most are languishing. The challenge at present is not to compete in top class brand products, which are also available in abundance in local markets, meant for those affluent consumers used to shopping in Milan, Zurich, London or New York. The challenge before Bangladesh today is how to make her existing SMEs compete with their equal-level rivals from abroad by modernizing themselves with up-to-date technologies and production processes. Along with that comes the question of how to develop the culture and practice of setting up new industries able to thrive in global competition right from the beginning. Globalization, as one knows, has not only challenges but also enormous opportunities for those who have the capability of utilizing them. For them to the most important issue will be choice of correct technology.

Several information systems (IS) adoption research studies involving SMEs have identified factors that influence IS adoption behavior by these enterprises. Closer
