PERMISSION OF USE

In presenting this report in partial fulfillment of the requirements for a Master of Science in IT degree from University Utara Malaysia, I agree that the University Library may make it freely available for inspection. I further agree that permission for copying of this thesis in any manner, in whole or in part, for scholarly purpose may be granted by my supervisor or, in their absence by the Academic Dean Awag Hag Salleh Graduate School of Arts and Sciences. It understands that any copying or publication or use of this thesis or parts thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to University Utara Malaysia for any scholarly use which may be made of any material from my thesis.

Requests for permission to copy or to make other use of materials in this thesis, in whole or in part, should be addressed to

Dean Awag Hag Salleh Graduate School College of Art and Sciences

ABSTRACT

In the case of large scale disaster, such as earthquake, volcanic explosion, sea wave and flood despite those the horrible phenomenon, website post flood disaster is required not only for governmental supporters but also residents and volunteers to communicate each other. It is possible to track and manage missing people by web based disaster management information system during the post flood disaster circumstances.

Thus, this study proposed web based to show information about missing people during and post flood disaster to track and report missing people. This web based has been developed using java programming and JSP which facilitates good design and services.

ACKNOWLEDGMENT

By the Name of Allah, the Beneficent and Merciful

First and foremost, thanks to Allah (SAW), I would like to thank my supervisor Assoc. Prof. Wan Rozaini Bt Sheik Osman without her knowledge and assistance this study would not have been successful. I am thankful also for my evaluator Dr. Angela Amphawan.

I wish to thank all my dearest family members, especially Dad, Mum, and my great brothers Mohammad, Mousa and my sisters for being by my side since I left home. For their continuous support, understanding and encouragement until this project and my studying has finally finished. I am indeed very grateful to have all of you around me thus given courage and energy to complete this project. Also thank to all my lecturers and friends especially my group studying since started who salaheddin Sayeh (Libya), suhail Qerenawe (Gaza strip), Ahmed Sarairah (Jordan) and Mahmoud Almadhoun (Gaza strip) who help me and give me emotional support during my study, Thanks to all.

Thank you UUM

Abdallah M.M Altrad

CHAPTER ONE

INTRODUCTION

1.1 Introduction

Disasters are not new phenomenon for communities, societies and regions where many life and properties are lost caused by flood, typhoon, earthquakes, tornadoes, volcano or wars. Disaster management is a vast process to provide helping, emergency services to search and recover people, properties, and belongings in the event of a calamity. Information Technology (IT) has been useful to reduce the disaster impacts via social network Medias, and web services (WS) where people can get in touch with lost relatives and friends. IT tools are very important to manage in a disaster (Xia & Jin, 2009). One of the challenges for all mankind in a natural disaster is managing disaster for those who live in rural or under develop places of the world with limited use and access to World Wide Web (Hongxia, Abeda, & Hongyanc, 2008).

The devastating largest three hurricanes in the US during hurricane season are called Rita, Katrina, and Wilma affected. Katrina destroyed around 90 000 square mile. Rita destroyed and damaged over 350 000 residences. Using the web sites for a disaster event shows a vital usefulness where the web is useful for the exchange of information and communication for managing disaster under the difficult situation. For example, after Katrina Hurricane, web pages were helpful to determine more than 18000 records of children who were forced to move from the New Orleans. A survey of health emergency response management professionals shows that
