PERMISSION OF USE

In presenting this project of the requirements for a Master of Science in Information Technology (MSc. IT) from Universiti Utara Malaysia, I agree that the University library may make it freely available for inspection. I further agree that permission for copying of this project paper in any manner, in whole or in part, for scholarly purposes may be granted by my supervisor or in their absence, by the Dean of Awang Had Salleh Graduate School of Arts and Sciences. It is understood that any copying or publication or use of this project or parts thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to Universiti Utara Malaysia for any scholarly use which may be made of any material from my project paper.

Request for permission to copy or make other use of materials in this project, in whole or in part, should be addressed to:

**Dean of Awang Had Salleh Graduate School of Arts and Sciences
Universiti Utara Malaysia
06010 UUM Sintok
Kedah Darul Aman.**

ABSTRACT

Recently, the online services have used widely in different fields for providing and facilitating user needs. Most of these services give the flexibility and easy to access anytime and anywhere without need to waste the time. This study was initialed for the current issues in determining the bed availability in the Libyan public hospital Al-Jumhuriya in Benghazi for pregnant. Thus, this study successful designed and developed the system based on the System Research Process Methodology. The system was developed based on JSP and MySQL tools and tested on local server. The result of the evolution found that the proposed Bed Reservation System (BRS) was easy to use, useful and achieve the uses intention in using it.

ACKNOWLEDGEMENTS

In the Name of Allah, the Most Gracious and Most Merciful

Praise to Allah for his guidance and blessing for giving me the strength and perseverance to complete this project. I would foremost like to thank my parents and my wife, for providing me with the opportunity to pursue my goals and for their love and affection, which has helped me through the most trying times. Equal gratitude goes out to my siblings and brothers. I would like to thank my supervisor: **Associate Professor Dr. Wan Rozaini Sheik Osman** for her guidance and constant motivation that has enabled me to complete my project work. Moreover, I would also like to thank her for the opportunities that she has made available to me.

Many thanks go to my evaluator **Dr. Mohd Syazwan B. Abdullah** for his tremendous help in providing me the valuable support, time and feedback are much appreciated.

Tarek M. Abuzeid

CHAPTER ONE

INTRODUCTION

Across the globe, many governments have resorted to the use of ICT applications in healthcare delivery in an effort to increase efficiency with varying degree of success (Hägglund, Scandurra, & Koch, 2010). The European Union as a regional unit in 2004 adopted eHealth Action Plan to facilitate a more harmonious and complementary European approach to eHealth which required member states to formulate tailored national and regional eHealth strategies to respond to their own specific needs (Shohet & Lavy, 2004; Vimarlund & Olve, 2005). This has resulted in a range of projects being implemented or in the process of development in most of these countries, for instance: fully functional ICT infrastructure purposely for eHealth (e.g. Denmark, Sweden, and Norway); Electronic Health Record systems (e.g. Austria, the Czech Republic, Denmark, Estonia, Finland, Romania, Slovakia, Sweden, and Spain); national health portals (e.g. Denmark, Finland, France, Hungary, Luxembourg and Slovakia); forms of eCards (e.g. Austria, France, Germany, Slovenia, and Italy) and ePrescription (e.g. England, Finland, Greece, Portugal, Spain, Sweden and Northern Ireland) (Doupi, Hamalainen, & Ruotsalainen, 2005; Piotti & Macome, 2007).

However, a number of considerations were assigned by different organizations for providing the end users with the suitable facilities to proceed through the e-services. The available functionalities into these systems are capable to carry out a certain needs based on the client requests (Hernández & Blanquer, 2005; Lymberis & Dittmar, 2007; Rahimi & Vimarlund, 2007).
