PERMISSION TO USE

In presenting this project in partial fulfillment of the requirements for a postgraduate degree from University Utara Malaysia, I agree that the University Library may make it freely available for inspection. I further agree that permission for copying of this project in any manner, in whole or in part, for scholarly purpose may be granted by my supervisor(s) or, in their absence by the Dean of the Graduate School. It is understood that any copying or publication or use of this project or parts thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to University Utara Malaysia for any scholarly use which may be made of any material from my project.

Requests for permission to copy or to make other use of materials in this project, in whole or in part, should be addressed to

Dean Awang Had Salleh
Graduate School of Arts and Sciences

Abstract

Web based online applications become the most useful tools to access the information about job applicants and job applications are accessible at the press of a button. The progress of Internet and World Wide Web technology brings the traditional recruitment process to web based recruitment. A recruitment and job search application system allow candidates to search for jobs anywhere anytime, helping people to find suitable work relevant to their needs. This study focused on how to recruit the job seeker through the internet, where it is expensive for job seekers to find jobs in the traditional way. It is also the problem for the employers to find suitable candidates regardless of gender, location, or nationality. The main purpose of this project is to enable employers to search for suitable candidates according to the requirements of organization, as well as allowing job seekers to search and select the availability of jobs suitable for their needs. This problem is solved by using and applying the general methodology. Two types of criteria are selected and designed to improve the quality of result for job seeker and employer. The project use Java script and Database MYSQL, is tested using (Black Box Test (Functional testing)) for all functionality.
ACKNOWLEDGEMENTS

By the name of Allah, the Most Gracious and Most Merciful

Alhamdulillah and thank to Allah, the Most Merciful and the Most Compassionate which has given me the commitment and the strength to start and complete his study
With the help and permission of Allah, I succeeded in finishing this project.

My endless appreciation goes to my supervisor, Assoc Professor Wan Rozaini Sheik Osman, for her invaluable input and guidance, patience, encouragement, and advice during the study. Indeed, without her support and guide this study would have never been possible.

Throughout the entire study process, my strongest source of motivation and inspiration has been due to the undying love, support, encouragement, blessing and pray from my beloved wife, Majd Ahmed Jumaah, my daughter Lamar and my brothers in law Mohammed Ahmed Jumaah and Omer Farouk Ibraheem. In addition, thankful to all member of My Family (Layth, Miami, Mohanad, Murooj and Yahya) respectively for their understanding and patience.

Special thanks to my colleagues and friends especially Mohammed F R Anbar and Ali Khalil Salih for their help and support

Last but not least, not forgotten to thank to all my friends and all who have contributed to the success of this study, directly or indirectly
THE CONTENTS

CHAPTER 1: INTRODUCTION

1.1 Overview.................................................................................................................1
1.1.1 Active method and passive method.................................................................3
1.2 Problem statement.................................................................................................4
1.2.1 The problem statement for job seekers.........................................................4
1.2.3 The problem statement for employers.........................................................5
1.3 Research questions...............................................................................................5
1.4 Research objectives...............................................................................................5
1.5 Research scope......................................................................................................6
1.6 Research significance............................................................................................6
1.7 Organize the chapters of project report...............................................................7
1.8 Conclusion............................................................................................................7

CHAPTER 2: LITERATURE REVIEW

2.1 Introduction...........................................................................................................8
2.2 Overview the web..................................................................................................8
2.3 Web application and internet application..........................................................9
2.4 Recruitment process..............................................................................................11
2.5 The matching between employer and job seeker..............................................12
2.6 Unified modeling language (UML)....................................................................14
2.7 MYSQL................................................................................................................15
2.8 The domain and roles of recruitment and job search application......................15
2.9 What methods were used to get a job.................................................................17
CHAPTER 3: RESEARCH METHODOLOGY

3.1. Introduction .............................................................................................................. 19

3.2 Research methodology diagram .............................................................................. 20

3.2.1 Awareness of problem .......................................................................................... 21

3.2.2 Suggestion .............................................................................................................. 22

3.2.2.1 The requirement of recruitment and job search application ........................................ 23

3.2.2.2 Benefits of identifying the requirements of our project ............................................... 23

3.2.2.3 Phase (1) The Data ............................................................................................ 25

3.2.2.4 Phase (2) The Input .......................................................................................... 26

3.2.2.4.1 The Information form ...................................................................................... 27

3.2.2.5 Phase (3) The Processing ................................................................................. 28

3.2.2.5.1 The Sort process for Employers ........................................................................ 29

3.2.2.5.2 The Sort process for Job seeker ........................................................................ 29

3.2.2.5.3 The Search Engine ......................................................................................... 29

3.2.2.6 The final Phase (4) The Output .......................................................................... 30

3.2.2.6.1 General Criteria and Special Criteria for each job .............................................. 30

3.2.2.6.2 The Point Method ........................................................................................... 31

3.2.2.6.3 How to represent the point method in our project .............................................. 32

3.2.2.6.4 How the system give point for each criteria ...................................................... 33
CHAPTER 4: ANALYSIS AND DESIGN THE SYSTEM

4.1 Introduction...........................................................................................................41

4.2 The requirement of the system...........................................................................41
  4.2.1 Functional requirement...............................................................................41
  4.2.2 Non-Functional requirement.......................................................................47
  4.2.3 Software requirement.................................................................................48

4.3 Use case diagram..............................................................................................48

CHAPTER ONE

INTRODUCTION

1.1 OVERVIEW

Information Computer Technology (ICT) has affected the latest development in all areas of life, reduced the time to complete processes and projects, different sizes, showed how the globe has became a small village. ICT linked computing devices and allowed people to communicate with each other to create networked information systems based on a common protocol. At the present time a lot of people find it difficult to get a suitable job. Searching for a job can be done through the advertisements in magazines, newspapers, or through job centers. On the other hand, many employees are not satisfied with their jobs due to several reasons. One of these reasons can be the lack of satisfaction as the job seeker is selected by the employer for an unsuitable position. For example, an Engineer works in an administrative position not in a technical field where he/she was trained in. This may lead people to quit their jobs and seek for another one. The constant mobility of workers will incur cost for the organizations and the individuals.
