Prof Madya Hatim B Mohamad Tahir
Saya, yang bertandatangan, memperakukan bahawa (I, the undersigned, certifies that)

FAKHRANI, HESHAM MOHAMMED A
(806964)
calon untuk ijazah (candidate for the degree of) MSc. (Information Communication Technology)
telah mengemukakan kertas projek yang bertajuk (has presented his/her project of the following title)

DEVELOP AN ONLINE BOOKING SYSTEM FOR GRADUATE STUDIES AT KING FAISAL UNIVERSITY MEETING AND SEMINAR ROOMS

seperti yang tercatat di muka surat tajuk dan kulit kertas projek (as it appears on the title page and front cover of project)
bahawa kertas projek tersebut boleh diterima dari segi bentuk serta kandungan dan meliputi bidang ilmu dengan memuaskan. (that this project is in acceptable form and content, and that a satisfactory knowledge of the field is covered by the project).

Nama Penyelia (Name of Supervisor) : ASSOC. PROF. HATIM MOHAMAD TAHIR
Tandatangan (Signature) : [Signature] Tarikh (Date) : 12/6/11

Nama Penilai (Name of Evaluator) : MR. MOHAMAD FARHAN MOHAMAD MOHSEN
Tandatangan (Signature) : [Signature] Tarikh (Date) : 12/6/11
PERMISSION TO USE

In presenting this project of the requirements for a Master of Science in Information and Communication Technology (MSc. IT) from Universiti Utara Malaysia, I agree that the University library may make it freely available for inspection. I further agree that permission for copying of this project paper in any manner, in whole or in part, for scholarly purposes may be granted by my supervisor or in their absence, by the Dean of Graduate School. It is understood that any copying or publication or use of this project or parts thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to Universiti Utara Malaysia for any scholarly use which may be made of any material from my project paper.

Request for permission to copy or make other use of materials in this project, in whole or in part, should be addressed to:

Dean of Awang Had Salleh Graduate School
Universiti Utara Malaysia

ABSTRACT

In general, online booking application is known as software that delivers functionality to a user through a Web server, network or intranet. The current booking schema for the meeting and educational activities in different universities have considered to be unsuitable to perceive the satisfaction of user during the booking process at King Faisal University, which done manually. Thus, this study proposed the development of advance online booking system for Graduate Studies meeting and seminar rooms at King Faisal University for managing and processing the system objects sequentially among users. Technology Acceptance Model (TAM) was customized in this study to carry out the ease of use, usefulness, and satisfaction of the proposed system among participants UUM post graduate students were closed to evaluate the system. Then data was collected and analyzed, the result indicated that the system was ease, useful, and gained the satisfaction of users. The result indicated that using the proposed booking system among participants was easy and useful to accomplish their works with a Mean = 4.0400 (StD=.66884) as for usefulness and a Mean= 4.0600 (StD=.71171) for ease of use.
ACKNOWLEDGEMENTS

Praise to Allah for his guidance and blessing for giving me the strength and perseverance to complete this project. I would foremost like to thank my parents, for providing me with the opportunity to pursue my goals and for their love and affection, which has helped me through the most trying times. Equal gratitude goes out to my siblings and brothers. I would like to thank my supervisor: “Prof Madya Hatim B Mohamad Tahir” for his guidance and constant motivation that has enabled me to complete my project work. Moreover, I would also like to thank him for the opportunities that he has made available to me.

Fakhrani, Hesham Mohammed / May 15, 2011

## CHAPTER ONE

**INTRODUCTION**

1.1 Introduction

1.2 Background

1.3 Statement of Problem

1.4 Objectives of the Study

1.5 Research Questions

1.6 Significance of the Study

1.7 Overall of the Proposal Structure

1.8 Summary

## CHAPTER TWO

**LITERATURE REVIEW**

2.1 Introduction

2.2 Online Booking System

2.3 Principles, concepts and Theories

2.3.1 Technology Acceptance Model (TAM)

2.4 Theoretical Framework

2.5 Limitation

2.6 Related Works

2.6.1 University of Denver/choose Event for Reservation

2.6.2 Rice University/Duncan Room policies and operations

2.6.3 University of Scranton Events system/online programs for General users

2.7 Summary

## CHAPTER THREE

**RESEARCH METHODOLOGY**

3.1 Introduction

3.2 Research Method

3.3 Research Design

3.3.1 Analysis

3.3.2 Design

3.3.3 Development
3.3.4 Implementation
3.3.5 Evaluation
3.4 Population and sample
3.5 Variables
3.6 Instrument
3.7 Procedures of study
3.8 Data collection
3.9 Data Analysis
3.10 Definition Of Terms
3.11 Summary

CHAPTER FOUR

Design and Development
4.1 Introduction
4.2 Storyboard Design
4.3 System Requirements
4.3.1 Functional Requirements
4.3.2 Non Functional Requirements
4.4 UML
4.4.1 Introduction
4.4.2 Use Case Diagram

CHAPTER ONE

INTRODUCTION

1.1 Introduction

Web application is an application that is accessed via web over a network such as the internet or an intranet. Web applications are popular due to the ubiquity of a client, sometimes called a thin client. The ability to update and maintain web applications without distributing and installing software on potentially thousands of client computers is a key reason for their popularity. Web applications are used to implement Webmail, online retail sales, online auctions, wikis, discussion boards, Weblogs, MMORPGs and many other functions (Erl, 2005).

The World Wide Web has succeeded in large part because its software architecture has been designed to meet the needs of an internet-scale distributed hypermedia system (Erl, 2004). The modern Web architecture emphasizes scalability of component interactions, generality of interfaces, independent deployment of components, and intermediary components to reduce interaction latency, enforce security, and encapsulate legacy systems (Curbera, Leymann, Storey, Ferguson, & Weerawanana, 2005). The main pieces of the internet from a User's pc are extending all the way through to the online content. Each section mentions the most significant parts of the web's architecture (Zeng, et al., 2004).
The contents of the thesis is for internal user only
