ANALYSIS OF WORK STRESS AMONG BANK EMPLOYEES:

A CASE STUDY OF BANK RAKYAT

By

ALIAH BINTI ROSLAN

Thesis Submitted to the Othman Yeop Abdullah,

Graduate School of Business, Universiti Utara Malaysia,

In Fulfillment of the Requirement for Project Paper,

Master of Science (Management)

June 2011
PERMISSION TO USE

In presenting this project paper in partial of requirement for a postgraduate degree from the Universiti Utara Malaysia, the author agrees that the University Library may make it freely available for inspection. The author further agree that permission for copying of this thesis in any manner in whole or in part, for scholarly purposes may be granted by my supervisor on in their absence by the Dean of the Graduate School. It is understood that any copying or publication or use of this thesis or parts thereof for financial gain shall not be allowed without any written permission. It is also understood that due recognition shall be given to me and to Universiti Utara Malaysia for any scholarly use which may be made of any material from thesis. Requests for permission to copy or to make other use of materials in this thesis, in whole or in part should be addressed for:

Dean of Othman Yeop Abdullah

Graduate School Of Business

Universiti Utara Malaysia (UUM)

06010 Sintok

Kedah Darul Aman
The purpose of this study is to determine factors of work stress among the Bank Rakyat’s employees. This study also aims to determine whether there were any statistically significant differences in the respondents’ level of work stress by demographic factors (gender, status, education qualification, job position and length of service).

The survey was carried out at 12 branches of Bank Rakyat at Northern Zone. A total of 154 bank employees participated in this study. Data was collected through 40 items questionnaires on a five-point Likert Scale. Both descriptive and inferential statistics were used to analyze the data using the SPSS version 15.0. Correlation analyses were conducted to test the relationship between levels of work stress with personal factors, organizational factors and environmental factors; whereas descriptive analysis was conducted to analyze demographic characteristics of respondents. Besides that, T-test, ANOVA and regression were also used in this study.

The findings of this study showed that there was no statistically significant difference in the level of work stress by demographic factors (gender, status, education qualification, job position and length of service). However, the findings showed that only organizational factors have significant relationship with work stress level. Findings of this study also resulted in the overall level of work stress among respondent is moderate.
ABSTRAK

Tujuan kajian ini adalah untuk mengenalpasti faktor-faktor tekanan kerja di kalangan pekerja-pekerja Bank Rakyat. Kajian ini juga bertujuan bagi mengenalpasti sama ada terdapatnya perbezaan statistik yang signifikan pada tahap tekanan kerja responden-responden berdasarkan faktor demografi (jantina, status perkahwinan, pencapaian akademik, kedudukan pekerjaan dan tempoh perkhidmatan).

Hasil kajian menunjukkan bahawa tiada perbezaan statistik yang signifikan pada tahap tekanan kerja dari segi faktor demografi (jantina, status perkahwinan, pencapaian akademik, kedudukan pekerjaan dan tempoh perkhidmatan). Bagaimanapun, hasil kajian menunjukkan faktor organisasi mempunyai perhubungan signifikan dengan tahap tekanan kerja. Hasil kajian ini juga menunjukkan tahap tekanan kerja yang dialami oleh responden adalah pada paras index yang sederhana.
ACKNOWLEDGEMENT

Alhamdulillah, by the will of Allah S.W.T, I am able to complete this thesis within the required time. I would foremost extend my sincere gratitude to all those efforts, which facilitated the completion of this project paper.

First and foremost I would like to acknowledge my project supervisor, Dr. Fais Bin Ahmad for his invaluable efforts and time in providing proper guidance, assistance and effortless support throughout the entire process. It was his faithful assessment, critique, and encouragement that made this research one of growth and enjoyment. I also would like to thank to Dr. Amer B. Hj. Darus for his inspiration, wisdom and understanding in getting this research complete.

A special thanks goes to my beloved parents, Roslan B. Md Som and Rohmah Bt. Osman, for being the greatest source of support I could have throughout my education. They gave me an immeasurable amount of love and encouragement and prayers throughout the entire process.

My sincere gratitude goes to Northern Regional Manager, Tuan Haji Mohd Azmir B. Mohd Nasruddin and management of Bank Kerjasama Rakyat (M) Berhad especially to Northern Region branches for granting permission to carry out this. To my respondents, my sincere appreciation for taking time and effort to participate in this research and without your participation, this research will never complete.

Finally, I would like to thank everybody who was important to the successful realization of my project paper, as well as expressing my apology that I could not mention personally one by one.

CHAPTER 1

INTRODUCTION

1.1 BACKGROUND OF STUDY

Over the last century, stress as an interdisciplinary concept become a region of nice interest and has been researched extensively. As cited by Baskaran (2004), stress has become therefore common in both developed as well as developing countries that individuals have referred to as it ‘the third wave plague’ (Sutherland & Cooper, 1990). This problem has become a serious issue, however the word “stress” is utilized by totally different people, in several contexts and for various purposes.

According to Stoppler (2011), generally stress is said to contain external and internal factors. External factors comprise the physical atmosphere such as challenges, difficulties, and expectations that confronted by people on a day-to-day basis. Internal factors confirm body's ability to retort to, and cope with, the external stress-inducing factors. Internal factors that influence the power to handle stress consist of nutritional standing, overall health and fitness levels, emotional well-being, and also the quantity of sleep and rest that a person get.

The earliest studies on stress were largely physiological. Selye (1956) had developed psychological model where it established a link between stressors and illness in his model of general adaptation syndrome. The attempt to grasp psychological stress did not solely involve the link between stress and illness; different human characteristics like emotion, motivation and performance were linked to anxiety. The realm of stress
The contents of the thesis is for internal user only
