ABSTRACT

The purpose of this study is to determine the factors of stress among industrial workers in Malaysia. There are three independent variables in this study which are work environment, management support and employee satisfaction.

This study was done among 244 operators in Shorubber (M) Sdn. Bhd. Data were gathered through questionnaires and being analyzed by using Statistical Package for Social Science (SPSS) version 16.0. This software was used to analyze the data and test each hypothesis in this study.

The findings suggested that only work environment and employee satisfaction were supported the hypothesis in this study. Management support was not supported the hypothesis. Recommendations for future research and for the company were also discussed.
ABSTRAK

Kajian ini bertujuan untuk mengetahui faktor-faktor tekanan di kalangan pekerja industri di Malaysia. Terdapat tiga pembolehubah tidak bersandar di dalam kajian ini iaitu persekitaran kerja, sokongan pihak pengurusan dan kepuasan pekerja.

Penemuan menunjukkan bahawa hanya persekitaran kerja dan kepuasan pekerja menyokong hipotesis didalam kajian ini. Manakala, sokongan pihak pengurusan tidak menyokong hipotesis. Cadangan untuk kajian akan datang dan kepada organisasi juga turut dibincangkan.
ACKNOWLEDGEMENT

Bismillahirahmanirrahim
Alhamdullillah,

In the name of ALLAH the almighty, I praise him and felt very grateful to him for having showed me devine in completing this thesis successfully. This thesis is done to fulfil the requirement to achieve Master of Human Resource Management program in Universiti Utara Malaysia. Many people are kind enough to provide me assistance in achieving an excellent result in the process for the research to be in reality.

My sincere gratitude to my supervisor, Mr. Ghazali Din for his valuable supervision and guidance during this thesis writing process from the beginning until the end.

I also like to extend my gratitude and thankful to Mr. Amir, Safety Officer at Shorubber (M) Sdn. Bhd, who help me in give the information about the company and also distribute and collect the questionnaire during my data collection process.

Finally, I would like to take this opportunity to express my love and thankful to my family especially my mother who have indirectly supported me in my research and also to those many friends who had helped in the making of this thesis complete.

CHAPTER 1

INTRODUCTION

1.1 Background of the study

Earlier studies that began in the 1930s (Haslam, 2004), shows that stress will cause physical and psychological symptoms that exist due to the difficulties experienced when individual is trying to adapt to an environment (Bennett, 1997). When stress in employees is out of control it will affect the employees of an absence which could affect the performance of the organization. Stress also affects in worker absenteeism, low employee morale, high job accidents, and the primary is a decline in labor productivity. Stress also can be act as an 'alarm' in the individual’s body to act. Therefore, it is very important for individuals who have stress to regulate the stress so as not to endanger themselves and others.

There are many definitions on stress. Andre (2008) stated that stress is a state of tension experienced when one’s usual modes of coping are insufficient. Some of the common stressors at work are the stress of the job itself, physical factors such as repetitive stress injuries, and conflicts between your work and your personal life.
