PERMISSION TO USE

In presenting this project in partial fulfillment of the requirements for a postgraduate degree from Universiti Utara Malaysia, I agree that the University Library may make it freely available for inspection. I further agree that permission for copying of this project in any manner, in whole or in part, for scholarly purpose may be granted by my supervisor(s) or, in their absence by the Dean of Postgraduate Studies and Research.

It is understood that any copying or publication or use of this project or parts thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to Universiti Utara Malaysia for any scholarly use which may be made of any material from my project. Requests for permission to copy or to make other use of materials in this thesis, in whole or in part, should be addressed to

Dean of Postgraduate Studies and Research
College of Business (COB)
Universiti Utara Malaysia

Kedah Darul Aman.
ABSTRACT

Nowadays, there has been a dramatic proliferation in the number of blogs and several social networks; however, little is published about what factor(s) motivates universities students to participate in blog activities. The remarkable growth and use of a social networking website such as "Facebook", "Hi5", and "Friendster" among UUM international postgraduate students is more challenging for a researcher to investigate the extent to which a new media channel affects people’s lives, relationships, and wellbeing, how and why it is used, and who is using it. Based on the Theory of Reasoned Action (TRA), a model was developed relating technology acceptance (TAM) and social influences. A combination of convenience and purposive sampling was used to collect the data from UUM Postgraduate students that used different blogs and Facebook regularly. A survey of 112 of UUM postgraduate students found strong support for the model. One of the major finding of this research illustrated that perceived usefulness, ease of use and social norms were positively related to attitude toward blogging and accounted for a higher variance. On the other hand, perceived enjoyment and attitude toward blogging did not significantly influence UUM postgraduate students’ intention to continue to use Facebook as their favorite blogging site.
ACKNOWLEDGMENT

Praise and gratitude be given to Allah the Almighty for putting forward me such a great strength, patience, courage, and ability to complete this project.

My excessive gratefulness goes to my supportive and helpful supervisor, Mr. Abdul Manaf Bohari for assessing and guiding me in the presentation of the research. With all truthfulness, without him, the project would not have been a complete one. He has really been for me a center of motivation and guidance. I am truly grateful to his continual support and cooperation, as being prepared to assist me all along the completion of the project.

I would like to present my thanks to my mother who has always been there for me, my late father whom I wished to be present and witness what his son has achieved, and special admiration to my wife Tehani and my daughter Dana.

My demonstrative appreciations go to all my friends, colleagues (Alkatib Mahamat and Muftah Banighish), all COB staff, and everyone who has helped me either directly or indirectly to the completion of this project.

CHAPTER ONE
INTRODUCTION

1.0 Introduction

A Blog is known as a web page that has minimal to no external editing, providing online commentary, periodically updated, and presented in reverse chronological order, with hyperlinks to other online sources (www.samizdata.net). Another definition provided by the Oxford English Dictionary Online (OEDO) notes that the noun blog signifi es a frequently updated web site consisting of personal observations, excerpts from other sources, typically run by a single person, and usually with hyperlinks to other sites; an online journal or diary.

However, on the Internet, a blog is a personal or professional journal that is frequently updated and intended for general public consumption. The essential characteristics of the blog are its journal form, typically a new entry each day, and its informal style. Many blogs include photo, audio, and video information. The concept of 'Blogs' has evolved along similar lines to other forms of human communication in that they are a product of convenience rather than design (Williams, and Jacobs, 2004).

For instance, according to Holloway, (2006), blogging is one of the most recently developed techniques for an ordinary person to promote a message to the world. As it has been easy to use from any Internet connection point, blogging has become firmly established as a web based communications tool (Williams, and Jacobs, 2004); and people who are open to new experiences and those who are highly sensitive are likely to be bloggers (Guadagno, Okdie, and Eno, 2008).
