PERMISSION TO USE

In presenting this project in partial fulfillment of the requirements for a postgraduate degree from the Universiti Utara Malaysia, I agree that the University Library may make it freely available for inspection. I further agree that permission for copying of this project in any manner in whole or in part, for scholarly purposes may be granted by my supervisor(s) or in their absence by the Dean of Awang Had Salleh Graduate School. It is understood that any copying or publication or use of this project or parts thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to Universiti Utara Malaysia for any scholarly use which may be made of any material from my project.

Requests for permission to copy or to make other use of materials in this project, in whole or in part, should be addressed to

Dean of Awang Had Salleh Graduate School

ABSTRACT

Managing an organization requires access to information in order to monitor activities and assess performance. Business Intelligence (BI) solutions provide organizations with timely, integrated information that is crucial to the understanding of their business. Data Warehouse (DW) technology is one of the important strategic management approaches for decision making in an organizations. The BI combines architectures, tools, databases, analytical tools, and methodologies to enable the implementation of interactive information in generating analytical reports. Strategic reports, which influence the enduring way of the whole company, are typically used by top managers. These kinds of decisions are repeatedly complex and the outcomes unsure, because existing information is habitually incomplete. Managers at this point must normally depend on history experiences and their instincts when making strategic decisions. DW is a technology allows integrating and transforming enterprise data for strategic decision making. Furthermore, Decision Tree (DT) is a decision support tool that uses a tree-like graph of decisions and their possible consequences, including chance event outcomes, resource costs, and utility. The organization, which is, responsible to manage people activities need strategic decisions making. This paper will be focused how to design and develop Strategic Reports using DW and DT Model for National Co-operative Organization of Malaysia (ANGKASA) called DSRNCO, as a case study. This system has been evaluated through the system user feedback by using Computer System Usability Questionnaire (CSUQ), which measures system usability and user satisfaction.

ACKNOWLEDGEMENT

By the Name of Allah, the Most Gracious and the Most Merciful

This research would not have been possible without the guidance and the help of several individuals that, in one way or another, contributed and extended their valuable assistance in the preparation and completion of this research. First, I would like to thank Allah for giving me the strength and perseverance to complete this work. Deepest appreciation and heartily thankful goes, and I would like to express my sincere my supervisors, Prof Dr. Norshuhada Shiratuddin and Mr. Muhamad Shahbani Abu Bakar, who have supported me throughout my research process with their support, guidance, patience and knowledge. I would like to extend my acknowledgement to my evaluator Mr. Zhamri Che Ani for his valuable comments and notes, which contribute to add a lot to this work. I offer my sincerest gratitude to my family in Iraq, especially my brothers, my sisters and my nephews (Mohammed, Zaid, Shahad, Adyan, Mohammedali and Rawan) for their enthusiasm to educate their children and for their prayer, love, and support in the duration of my study in Malaysia. My acknowledgements would not be complete until I thank my mother Mdm. Maryem Al-Musawi for her love and moral support, supporting me spiritually throughout my life. Without her, I'm nothing here. Special thanks to all my colleagues: Mr. Sajjad, Hayder Nasser, Ayad, Mohammed, Mousaab and others for their fruitful discussions and help in difficult times. Last but not the least; I would like to express my gratitude to all of Malaysian people, especially UUM lecturers and staffs, for their very good dealing with all of international students.

CHAPTER ONE

INTRODUCTION

1.1 Introduction

A businessman is a person who is employed by an organization or company in a business at a managerial level, especially an executive or proprietor. The business man monitors and controls his business activities as a manager. In National Co-operative Organisation of Malaysia or Angkatan Koperasi Kebangsaan Malaysia Berhad (ANGKASA), the supporting of the businessman (ANGKASA members involved in business) has become to enhance an agenda in national policy for many countries. ANGKASA is an organization that promotes the cooperative philosophy, provides member education and advisory services and publishes co-operative literatures as well as represents the co-operative movement in national and international matters. ANGKASA is an APEX cooperative, recognized by the government as the National Co-operative Movement of Malaysia. It provides training programs to members of the cooperative in addition to providing payroll deduction services to statutory bodies, government staffs, clubs, cooperatives, unions and the Global Local Company (GLC). Senior Management and executives in ANGKASA deal with reporting figures at an overview level in contrast to an analyst in a department who deals with data at finer level of detail. Reports of this type may also require operability with charts, tabular metrics and graphs. Strategic reports may involve complex analysis, which can be resolved by a Business Intelligence (BI) system.

BI refers to applications that are able to transform data into information and then into knowledge (Golfarelliet al., 2004). The main function of BI is the ability to generate analytical reports,
