PERMISSION TO USE

In presenting this in partial requirement for a post graduate degree from Universiti Utara Malaysia, I agree that the University Library may make it freely available for inspection. I further agree that permission for copying of this project paper in any manner, in whole or in part, for scholarly purposes may be granted by my supervisor or, in their absence, by the Dean of College of Business to which this project paper is submitted. It is understood that any copying or publication or use of this project paper or parts thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and the Universiti Utara Malaysia for any scholarly use that may be made of any material from my project paper.

Request for permission to copy or make use of materials in this project paper, in whole or part should be addressed to:

ABSTRACT

The purpose of this research is to evaluate the relationship between hygiene factors and job satisfaction of employees in the Asset Maintenance Department at Tenaga Nasional Berhad. The main objectives of the study were; to determine the relationship between hygiene factors and employee’s job satisfaction and; to determine the relationship between four aspect of hygiene factor (work conditions, salary, promotion and interpersonal relationship) and employee’s job satisfaction. Research was conducted through a survey instrument consisting personal particular, job satisfaction and hygiene factors questions adopted from validated Job Description Index (JDI) Questionnaires. The data was collected from 90 respondents by using a structured questionnaire. Cronbach’s alpha coefficient and test item were calculated for reliability of the factor using Reliability Analysis. The tests conducted were Frequency Analysis, Pearson’s Correlation, and Multiple Regression in answering the objectives of the research. There were five main hypotheses that were tested using Pearson’s Correlation analysis. The Pearson’s Correlation showed that only salary and promotion correlated to job satisfaction. Multiple regression tests showed that Job Satisfaction was significantly influenced by the salary and promotion. It was also evidenced that demographic elements, namely gender, age, marital status, education level, years of service and salary range not influencing employees on job satisfaction.
ACKNOWLEDGEMENT

In the Name of ALLAH, the Gracious and the Merciful

These past one and a half year in graduate school have been an incredible journey to me, and there are several people who deserved recognition for their support and encouragement.

I am heartily thankful to my supervisor, Dr. Jasmani Binti Mohd Yunus, whose encouragement, guidance and support from the initial to the final level enabled me to develop an understanding of the subject.

To my beloved wife, Siti Hassanah Binti Hassan for her unflagging support, patience, tolerance and encouragement that keep me going and remain determine to go through this study until the completion, not to forget my parents and family for their support.

Finally, I wish to thank my course mate and my lecturers in Universiti Utara Malaysia for all of their help during my learning here. To my respondents, my sincere appreciation for taking the time and effort to participate in this research and without your participation, this research will never be completed.

Thank You.

Mohd Firdaus Bin Jalaluddin

CHAPTER 1
INTRODUCTION

1.1 Background of the study

Job satisfaction has been a matter of concern and attention in any field of business nowadays. Organizations realize that employee job satisfaction is the essential element to increase customer satisfaction and keep their business running, as competition is getting more intense. Employee dissatisfaction will usually spread their problem to their workmates and word of mouth can do a lot of harm to an organization. The dissatisfied employee complaints can be a useful source of information for the organization to develop their business strategies and formulate their tactical decisions.

By 1927, the study of employee’s positive or negative reaction to their jobs had fully begun to take hold when Elton Mayo first studied the effect of lighting at the Western Electric Hawthorne Works in Chicago (Bruce & Blackburn, 1992). These studies showed that lighting had little connection to worker productivity, creating the fundamental groundwork for future studies that asked about other factors that may have an impact on employees. The Hawthorne Studies continued until 1932, and in the five-year interval, the research widened to include factors such as temperature, fatigue, breaks, and working hours. Mayo’s work may seem marginally relevant to job satisfaction today, but he discovered that the mere act of studying workers and providing them with more attention increased their motivation and productivity. Mayo had stumbled upon the essence of human motivation, marking a new era of
