PERMISSION TO USE

In presenting this thesis in partial fulfillment of the requirements for a post-graduate degree from Universiti Utara Malaysia, I agree that the University Library may make it freely available for inspection. I further agree that permission for copying of this thesis in any manner, in the whole or in part, for scholarly purposes may be granted by my supervisor or in his absence, by the Dean of Graduate School. It is understood that any copying or publication or use of this thesis or parts thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to Universiti Utara Malaysia for any scholarly use which may be made of any materials for my thesis.

Requests for permission to copy or to make other use of materials in this thesis, in whole or in part should be address to:

Dean of Faculty of Information Technology
Universiti Utara Malaysia

Kedah Darul Aman

ABSTRACT

One of the prevailing tendencies of the modern communication technology is tourism services providers guide system, the interaction of the government, tourism services providers and the citizens or the tourists wherever they go. The processes in a tourism service providers guide intends to improve the performance of specific tasks which may include define service providers (hotels, car rental, airlines, travel agency) supervised by one administrator. Furthermore, any service providers can login and edit for special profile information.

This system will provide searching access for main information about tourism Services providers in the Jordan for any citizens or tourists anywhere, and at any time, quickly and easily, using mobile technology.

Finally, the system is tested and the result confirms that the proposed system.

ACKNOLOGMENT

First I would like to express my deepest appreciation to my supervisor Mr. Abdul Razak Rahmat for his guidance, patience, and constant support throughout this project.

My thanks go to my uncle Mohammed ALksasbeh for his support and advice to continue my higher studies.

Last but not least, I would like to extend my deepest gratitude to my family particularly my parents for being with me throughout this study, support and trust.

This work is dedicated to my father and mother .

CHAPTER 1

INTRODUCTION

1.0 Introduction

E-government is a national program. The purpose of this program is to improve government performance in the services, efficiency, accuracy, time and cost and high transparency and the high level of customer satisfaction across government.

As an integral part of the E-government many central and local governments begin providing E-government services through a variety of channels of service delivery to the network. One of these channels is the delivery of mobile telephone services. This channel has become more important in view of the faster growth than the mobile penetration rate compared to the PC-based Internet, a factor that could play a significant role in bridging the digital divide. The use of mobile services produced the government is called mobile government.

From a citizen perspective, m-government stands for a new type of front-end access to public services that have been made available specifically for mobile devices or adapted from existing applications government. M-government also means that citizens do not have to go and search for kiosks, or even access connection to the house, carrying a mobile direct with access to m-government wherever they go.

only

7.3 Future Work

Government agencies are currently exploring the feasibility of using new mobile technologies such as two-dimensional (2D) barcode technology for mobile services. Such technology embeds information on printed images, which is invisible to the human eye. This digital information can be decoded by taking a photo of the image with a camera phone and using reader software. With the captured image, our customers can access government information and services instantly via their mobile phones.
