Universiti Utara Malaysia (UUM) does not accept any liability for the accuracy of such comment, report and other technical and factual information and the copyright or ownership rights claims.

The author declares that this dissertation is original and her own except those literatures, quotations, explanations and summarizations which are duly identified and recognized. The author hereby granted the copyright of this dissertation to College of Business, Universiti Utara Malaysia (UUM) for publishing if necessary.
ABSTRAK

ABSTRACT

Appointment of expatriates for academic positions at public universities in Malaysia is a result of the transformation of higher education in Malaysia. It therefore involves investment from the government to facilitate the appointments. With issues pertaining to expatriates adjustment and performance, it is vital that public universities are able to ascertain the level of organizational commitment of its expatriates. This study looks at providing insight to the levels and relationships of perceived organizational support, compensation satisfaction and organizational support of expatriates at one of Malaysia’s largest public university. Data was gathered using questionnaires sent out to expatriates on contractual appointment (contract of service) at the University (n = 93). Frequency analysis determined the levels of perceived organizational support, compensation satisfaction and organizational commitment and also the most significant dimension of organizational commitment. Subsequently correlation and regression analysis were carried to determine the relationship and significance of the variables. The findings revealed that the level of perceived organizational support is high whereas levels of organizational commitment and compensation satisfaction are low. It was also revealed that normative and continuance commitment are the most significant dimensions of organizational commitment. The correlation analysis proved perceived organizational support to be highly significant to affective and normative commitment whereas its relationship with continuance commitment is not significant. Likewise, compensation satisfaction and both affective and normative commitment are also significant while its relationship with continuance commitment is less significant. Finally the regression analysis revealed perceived organizational support as being more significant at influencing organizational commitment. Future research should look at introducing other variables such as access to resources, employee services or personal characteristics to the model to increase model strength.
ACKNOWLEDGEMENT

First and foremost I am thankful to Allah SWT for his grace which carried me through this entire journey. It is with HIS will that I have accomplished what I have so far.

Secondly, I owe a great deal to my entire family for their support and encouragement which has been the pillar of my strength. To my mother who has taught me that life is only worth living if you are constantly learning. Also, to my father who has instilled in me the value of patience and perseverance. Sincere gratitude also goes out to my husband who has always been there for me, encouraging and supporting me throughout most of my adult life. To my kids who have sacrificed unconditionally to see me through and for being the force behind my success. Not forgetting the rest of my family for their undying words of encouragement and prayers.

I also wish to express my sincere appreciation to my supervisor, Associate Professor Dr. Khulida Kirana Yahya for her invaluable guidance, support and insight which has been the backbone to the successful completion of this study. She has been a driving force in the outcome of my Masters program and shall remain a mentor both personally and professionally.

To the Ministry of Higher Education, the Registrar of UiTM and my head of department I extend my thanks and gratefulness for their belief in me and for providing me with the opportunity to pursue this juncture of my life. It has not only changed me professionally but also personally.

Finally, to my course mates, friends and colleagues, I thank you for being part of my life and enriching it with your warmth, kindness and sincerity. May the bonds we have made transcend time and distance.

CHAPTER 1

INTRODUCTION

1.1 Introduction

Education in Malaysia has been a driving force to cope with global challenges faced by the country as well as contributing to the nation’s aspiration of becoming a developed country. Malaysia sees quality of education as directly related to the strength of the economy (Prime Minister of Malaysia, 2009). A critical success factor for the transformation of higher education in Malaysia is the transfer of knowledge. In the case of Malaysia, it has resulted in a trigger effect of employing international faculty or expatriates to help boost the standard of higher education in Malaysia. Therefore, expatriate adjustment and ultimately performance is vital to the success of this strategy. It was found that job satisfaction is the strongest predictor of expatriate adjustment and expatriates who are able to socialize at the host country are more likely to adjust more effectively to the new environment (Lee, 2005). Socialization in the host country would facilitate expatriates with cross-cultural adjustments faced with at the host country and give them the possibility of being accepted into the group of host country nationals faster compared to their counterparts who are unable to socialize at the host country.

A recent study of expatriate academic staff in Malaysia found that organizational commitment was positively correlated to job satisfaction and that local nationals scored higher job satisfaction than expatriate academic staff (Hassan & Hashim, 2011). It was argued that because organizational commitment measures emotional attachment to the organization, the more personal interactional justice had greater significance as a result of
