Abstract

The purpose of this study is to empirically examine the impact of corporate governance mechanisms (board characteristics) namely; board size, board of director's independence and CEO duality on the firm financial performance (ROA). For the purpose of this study, 60 non-financial listed companies have been chosen; 33 from Abu Dhabi Securities Exchange and 27 from Dubai Financial Market, all in UAE market context. The conduct of testing is controlled by firm size. Multiple regressions analysis is utilized in this study in order to achieve the research objectives. The findings show that factors of board characteristics namely; board size, board of director’s independence and CEO duality, have different relations with firm financial performance. First, the finding showed that board size has positive significant impact on the firm financial performance (ROA). Secondly, it showed that the board of director’s independence has no significant impact on the firm financial performance (ROA). Moreover, the finding showed that there is negative significant impact of CEO duality on the firm financial performance (ROA). Last but not least, the firm size as control variable has positive significant impact on the firm financial performance (ROA). Therefore, this study can clearly integrate the relationship between corporate governance mechanisms and firm financial performance, and it can help UAE authorities market to improve and enhance the firm financial performance.
ACKNOWLEDGEMENTS

In the name of Allah, the most gracious and most merciful

Praise to Allah, Lord of the universe for his bounties and bestowed upon us. Peace to Prophet Mohammed S.A.W. the sole human inspiration worthy of imitation. "Alhamdulihhah", all praise to Allah for the strength and endurance provided to me to complete the thesis. Working for Msc (International Accounting) degree generally and this dissertation specifically is no doubt a challenging and enduring journey that I will cherish all my life.

My highest and most sincere appreciation goes to my beloved parents, my mother, Safiya, may Allah bless her soul in Paradise, Insha'Allah, and I will always be very grateful to my beloved father Hamood for providing, supporting, and advising me with great patience and attention in everything that I had done to complete not only this thesis but also my whole life. Without forgotten also goes to my beloved wife, Amat Alkhaleq and my children. Shoura, Jibril, Shimaa, Afnan and Ali, my brothers, my sisters, and my entire family.

I would like to render my utmost appreciation and gratitude to my supervisor. Associate Professor Dr. Faudziah Hanim Bt Hj, Fadzil, for her earnest guidance and advice in construction my dissertation as well as her tolerance and persistence in imparting her knowledge to her students. Without her understanding, consideration and untiring advice, this dissertation would not have been completed successfully. My grateful appreciation also goes to my other lecturers who have imparted valuable knowledge to me and know-how during my studies for the Msc (International Accounting) program. My heartfelt appreciation also goes to all those involved in making this paper a reality and those who have contributed towards this profound learning experience. I owes thanks and appreciation to all those people. Thank you so much.

CHAPTER ONE

INTRODUCTION

1.1 Background of Study

In the current global business environment, business organizations struggle to achieve high record of growth in order to attract investors to finance their future investment projects. Generally speaking, the investment decisions taken by investors to invest in a particular business are mainly influenced by the ability of the business to remain stable and to generate profits (Mallin, 2007). This justifies the inability of deteriorating businesses to raise funds for their projects. This situation can affect not only the specific business organizations, but also the overall economic performance. To ensure the safety and security of the business environment, governments throughout the world have been paying an increasing attention to the implementation of corporate governance mechanisms. According to the Organization for Economic Cooperation and Development (OECD), “good corporate governance is essential for the economic growth led by the private sector and for the promotion of the social welfare.” In retrospect, since 1997, the Asian financial crisis has brought about a whole new meaning to corporate governance as evidenced from the crisis of confidence in the institutions and legislation that make up the governance of business and interactions between business and government.

In fact, many theorists have given an increasing attention to examining the link between corporate governance and the overall organizational performance. Due to its importance to the overall organizational performance, it is considered as one of the major factors that may influence the
