Abstrak

Perdagangan mudah alih telah digunakan dan dikaji secara meluas di negara-negara maju, namun penggunaannya di negara-negara Timur Tengah masih di tahap yang rendah. Malah, di Jordan, walaupun kadar penembusan pelanggan telefon mudah alih agak tinggi pada tahun 2009, penyelidikan empirikal berkaitan dengan perdagangan mudah alih ini adalah terhad. Oleh itu, penyelidikan kuantitatif ini bertujuan untuk mengkaji secara empirikal tentang penentu kepada penerimaan perdagangan mudah alih dalam budaya kelompok yang terdapat di Jordan di mana norma-norma sosial adalah dihargai sementara tindakan individunya dipengaruhi oleh kumpulan rujukan yang dominan. Model Penerimaan Teknologi (TAM) telah diperluaskan dengan mengambilkira empat faktor iaitu (keadaan/suasana yang membantu, kos, inovasi peribadi dalam teknologi maklumat (PIIT) dan norma subjektif). Untuk memahami norma subjektif dalam budaya kelompok ini, ianya telah dipecahkan kepada beberapa tahap yang berbeza iaitu injuksi peribadi dan masyarakat dan norma deskriptif. Rangka kerja kajian ini terdiri daripada dua belas pemboleh ubah pendam (lapan eksogen dan lima endogen). Pengumpulan data dilakukan melalui penggunaan kajiselidik-kendiri yang mengandungi 40 item berskala Likert 7-mata. Daripada 500 sampel, 448 maklumbalas (89.6%) berjaya dikumpulkan dan hanya 401 boleh digunakan. Pemodelan persamaan berstruktur telah digunakan untuk menganalisis data. Hasil kajian ini menunjukkan bahawa keadaan/suasana yang membantu, kos, PIIT, sikap dan tanggapan kegunaan adalah penentu penting ke atas niat tingkah laku di Jordan. Di samping itu, norma subjektif, keadaan/suasana yang membantu, kos dan tanggapan kegunaan adalah anteseden yang signifikan ke atas sikap yang akhirnya akan mempengaruhi niat tingkah laku. Selain itu, bukti empirikal juga menunjukkan bahawa norma peribadi injunksi, norma deskriptif peribadi dan norma injunksi kemasyarakatan adalah anteseden bagi norma-norma subjektif. Sebagai kesimpulannya, kajian ini membuktikan bahawa TAM lanjutan berjaya memperkayakan model dan meningkatkan kuasa penerokaan kepada 53% dalam menerangkan varian niat tingkah laku.

Kata Kunci: Niat perlakuan, M-dagang, Norma Subjektif

Abstract

Although mobile commerce have been used and widely researched in developed nations, there is a low usage in the Arab world. Also, there is a limited empirical research on mobile commerce in Jordan despite the high penetration of mobile phone subscribers in 2009. Among the aims of this quantitative research is to empirically investigate the determinants of mobile commerce adoption in a collectivist culture such as Jordan where social norms are valued and individual actions are influenced greatly by important reference groups. The Technology Acceptance Model (TAM) is extended to include four factors (facilitating conditions, cost, personal innovativeness in IT (PIIT) and subjective norms). Furthermore, in order to understand subjective norms in collectivist culture; subjective norms were decomposed into different levels (personal and societal injunctive and descriptive norms). The research framework consists of twelve latent variables (seven exogenous and five endogenous). Using self-administered survey, 40 items with 7-point Likert scale is used to collect data. Out of the 500 samples, 448 responses (89.6 % response rate) were collected; eventually 401 responses were usable. Structural Equation Modeling is applied to analyze the data. The findings of this study revealed that facilitating conditions, cost, PIIT, attitude and perceived usefulness are significant determinants of behavioral intention in Jordan. In addition, subjective norms, facilitating conditions, cost and perceived ease of use are significant antecedents of attitude which in turn influencing behavioral intention. Moreover, the empirical evidence indicated that personal injunctive norm, personal descriptive norm and societal injunctive norm are indeed antecedents of subjective norms. It can be concluded that extended TAM successfully enriched the model and increased the exploratory power to 53 % in explaining behavioral intention variance.

Keywords: Behavioral intention, M-commerce, Subjective norms

Acknowledgement

First of all, I would like to thank *Allah SWT*, the **ONE** and the **ONLY GOD**, the king of all the kings for the strength and the power that have given me to accomplish this thesis.

Also, I have been in debt in the preparation of this thesis to my supervisor, Dr. Massudi Bin Mahmuddin for his academic experience and patience; he made things easy for me when they were difficult. Also, I am grateful to my co-supervisor Prof. T. Ramayah for his comments, guidance and his academic experience.

I will be always in debt to my parents particularly my beloved father Mohammed Alnajjar (Abu Kifah), thank you my father for the support and the encouragement during my journey.

Last but not least, my wife Lucie, and my two kids (Safieh and Ibrahim), always my guiding light, and thank you my wife for your long support and patience.

Finally, thanks for everyone who helped me to complete my thesis.

CHAPTER ONE

INTRODUCTION

This chapter covers the main topics in this research; it begins with a brief background of m-commerce, motivations of the study, the research problem statement, questions, objectives, scope, significance of the research, research limitations and research contributions. It concludes with an overview of the content of this thesis.

1.1 Background

Nowadays, mobile phone users have the capability to conduct transactions, services, access information and buy goods anytime and anywhere. The rapid growths of mobile telecommunication and mobile-internet have made mobile commerce (hereafter referred to m-commerce) popular with businesses as well with individuals. M-commerce refers to direct or indirect transactions over wireless telecommunication by using mobile devices such as mobile phones or personal digital assistants (Wu & Wang, 2005).

Others have defined mobile business as new “experiences of social interaction” with the utilize of wireless and mobile telecommunication technologies (Mylonopoulos, Doukidis, & Editors, 2003). With the sharp growth of the mobile phone subscribers
