**Sekolah Siswazah  
(Graduate School)  
Universiti Utara Malaysia**

**PERAKUAN KERJA KERTAS PROJEK  
(Certification of Project Paper)**

Saya, yang bertandatangan, memperakukan bahawa  
(I, the undersigned, certify that)

**Ng Yong Hee**

calon untuk Ijazah  
(candidate for the degree of) Sarjana Sains (Teknologi Maklumat)

telah mengemukakan kertas projek yang bertajuk  
(has presented his/her project paper of the following title)

**Online Clinical System**

seperti yang tercatat di muka surat tajuk dan kulit kertas projek  
(as it appears on the title page and front cover of project paper)

bahawa kertas projek tersebut boleh diterima dari segi bentuk serta kandungan,  
dan meliputi bidang ilmu dengan memuaskan.  
(that the project paper acceptable in form and content, and that a satisfactory  
knowledge of the field is covered by the project paper).

Nama Penyelia  
(Name of Supervisor) : Prof. Madya Shahrum Hashim

Tandatangan  
(Signature)

Tarikh  
(Date) : 24 Oktober 2001

## **PERMISSION TO USE**

In presenting this project in partial fulfillment of the requirement for a post graduate degree from the Universiti Utara Malaysia, I agree that the Universiti Library may make it freely available for inspection. I further agree that permission for copying of this project in any manner, in whole or in part, for scholarly purpose may be granted by my supervisor or, in their absence, by the Dean of the Graduate School. It is understood that any copying or publication or use of this project or parts thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to Universiti Utara Malaysia for any scholarly use which may be made of any material from my project paper.

Requests for permission to copy or to make other use of material in this project in whole or in part should be addressed to:

**Dean of Graduate School  
Universiti Utara Malaysia  
06010 UUM Sintok  
Kedah Darul Aman**

## **ABSTRACT (BAHASA MALAYSIA)**

Tujuan utama projek ini untuk membangunkan satu sistem klinikal yang berkualiti serta bersambungan pada internet. Ia dibangunkan dengan menggunakan perisian Visual InterDev 6.0, SQL Server 6.0, Personal Web Server dan Macromedia Flash 4. Perisian Visual InterDev 6.0 digunakan sebagai alat untuk mencipta dan menyunting kod Active Server Page. Secara keseluruhannya, projek ini dapat menyediakan maklumat yang berkualiti pada penjagaan kesihatan dan klinikal kepada pengguna. Tambahan pula, projek ini boleh dianggapkan sebahagian pejabat perubatan. Ia juga dianggap sebagai alat latihan kepada pelajar perubatan dan penduduk.

## **ABSTRACT (ENGLISH)**

The main objective of the project is to develop a usable, quality and a online clinical system in the web. This system is developed by using software Visual InterDev 6.0, SQL Server 6.0, Personal Web Server and Macromedia Flash 4. The Visual InterDev 6.0 is chosen as a tool to create and edit source codes Active Server Page. Overall, this project is to provide quality information on the health care and clinical for user to access. Furthermore, this project can be an essential part of virtual medical office. It can be a training tool for medical students and residents.

## **ACKNOWLEDGEMENTS**

I would like to thank my supervisor, Associate Professor Shahrul Hashim for all his help, encouragement and patience throughout the development of this project. Beside that, I also would like to thank my friends who have recommended and borrowed me some ASP books and training materials, without their advice this project would not be completed on time. Lastly, I would like to thank my family members for their undying love and support.

## **Chapter 1**

### **INTRODUCTION**

Online Clinical System is a World Wide Web based secured application to share knowledge and experience via the Internet. Clinical data can be placed into the database directly from the desk of participating physicians and accessed from anywhere around the globe. In fact, multiple users can simultaneously access the same data.

A Clinical system is the systematic investigation which studies the effects of various methods or treatments used in a treatment of diseases. It refers to the evaluation of treatment methods, surgery, drugs, diagnosis and prevention techniques. In summary the clinical case contains information consisting of patients, and treatment that were given to them, the results of those treatments, follow up visits of patients to their doctors and their outcomes.

Most of the leading causes of illness and death result not from infectious diseases but from health compromising behaviors. Although the cause of death is usually reported in term of diseases, the actual cause more often is a chosen health behavior. Prevention techniques are the best strategy for a health future. For example, not smoking cigarettes reduce the risk of a range of illness, including cancer, heart diseases, stroke and lung diseases.

Nowadays, information technologies are transforming the way health care is delivered. Innovations such as computer-based patient records, hospital information systems, computer-based decision support tools, community health
