PERAKUAN KERJA KERTAS PROJEK  
(Certification of Project Paper)

Saya, yang bertandatangan, memperakukan bahawa  
(I, the undersigned, certify that)

PHAKLEN EHKAH

calon untuk ijazah  
(candidate for the degree of)  
Sarjana Sains (Teknologi Makkum)

telah mengemukakan kertas projek yang bertajuk  
(has presented his/her project paper of the following title)

Inventory Control Management System

seperti yang tercatat di muka surat tajuk dan kulit kertas projek  
(as it appears on the title page and front cover of project paper)

bahawa kertas projek tersebut boleh diterima dari segi bentuk serta kandungan,  
dan meliputi bidang ilmu dengan memuaskan.  
(that the project paper acceptable in form and content, and that a satisfactory  
knowledge of the field is covered by the project paper).

PERMISSION TO USE

In presenting this project in partial fulfillment of the requirement for a post graduate degree from the Universiti Utara Malaysia, I agree that the Universiti Library may make it freely available for inspection. I further agree that permission for copying of this project in any manner, in whole or in part, for scholarly purposes may be granted by my supervisor or, in their absence, by the Dean of the Graduate School. It is understood that any copying or publication or use of this project or parts thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to Universiti Utara Malaysia for any scholarly use which may be made of any material from my project paper.

Requests for permission to copy or to make other use of material in this project in whole or in part should be addressed to:

ABSTRACT (BAHASA MALAYSIA)

ABSTRACT (ENGLISH)

This project is aimed at developing an inventory control management system to allow the operator controlling and updating the flow of inventory in any organization. This system is developed by using software Visual Basic version 6.0 integrated with Microsoft Access 2000 and Seagate Crystal Report version 6.0. The Crystal Seagate Report is chosen because it is easy to developed and also its format more systematic compared to other report format. Overall, the developed system is increase the user's confidence because it is easy to used. Further works such as to upload the system to the Internet could be performed to improve the performance of the system.
ACKNOWLEDGEMENTS

First of all, I would like to thank my supervisor, Associate Professor Shahrum Hashim for all his help, encouragement and patience throughout the development of this project. And I also would like to thank my friend who introduced me to Seagate Crystal Report software, for this project would not be as good without his advice especially on the portion of report. Last but not least, I would like to thank my family members for their undying love and support. Thank you very much.

Chapter 1

INTRODUCTION

1.1 What is An Inventory

Inventory is a material held for future sale or use. It may consist of supplier, raw materials, in-process goods, and finished goods. Supplies are inventory items consumed in the normal functioning of an organization that are not a part of the final product. Typically supplies are pencils, paper, light bulbs, typewriter ribbons, and facility maintenance items. Raw materials are the inputs into the production process that will modified or transformed into finished goods. Typical raw materials for a furniture might be lumber, stain, glue, screws, varnish, nails, paint, and so forth. In-process good are the final products that are still in production process but have not been completed. Finished goods are the completed final product which is available for sale, distribution, or storage.
