Thesis submitted to
Othman Yeop Abdullah Graduate School of Business
University Utara Malaysia
In Partial Fulfillment of the Requirement for the Master of Science (Management)
PERMISSION TO USE

In presenting this thesis as a part fulfillment to the requirement for a postgraduate degree from Universiti Utara Malaysia, I hereby agree that the university’s library may make it unreservedly available for inspection. I further agree that the permission for copy of this thesis in any manner, in whole or part, for scholarly purposes may be granted by supervisor Dr Farrah Merlinda Muharam or, in her absence by the Dean of Faculty Othman Yeop Abdullah Graduate School of Business. It is understood that any copying or publishing or using of this thesis or parts thereof of financial gain shall not be allowed without any written permission. It is also understood that due recognition shall be given to me and to Universiti Utara Malaysia for any scholarly which may be made of any material from this thesis.

Request for the grant of permission to copy or make other use of material in this thesis in whole or in part should be address to:

ABSTRACT

Report shows that more than 60% of young individuals below 30 years of age are interested in owning their own business. However, only a small number of students start a business immediately after graduation due to the fact that being an entrepreneur is not considered as a career option. This study seeks to examine the relationship between entrepreneurship education, entrepreneurial experience and societal entrepreneurship attitude as factors influencing self-employment intention. The study was theoretically based on the Theory of Planned Behavior (TPB), Social Cognitive Theory (SCT) and Social Cognitive Career Theory (SCCT). Self-administered survey method was used to distribute questionnaire for collecting primary data through a simple random sampling technique from 113 Nigerian postgraduate students of Universiti Utara Malaysia (UUM) who are active in status. The collected data were then analyzed. The findings of this study found that entrepreneurship education, entrepreneurial experience and societal entrepreneurship attitude are positively related to UUM’s Nigerian postgraduate student’s intention towards self-employment. The study provides an enriched contribution to knowledge and significant implication to the theory and practices of entrepreneurship. It also signaled to policy makers such as education authority as well as government to look into the effect of entrepreneurship education, prior entrepreneurship experience as well as societal entrepreneurship attitude as influencing factors on students’ intention of becoming self-employed.

Keywords: Entrepreneurship education, entrepreneurial experience, societal entrepreneurship attitude, self-employment intention.
ACKNOWLEDGEMENT

This Project paper is the concluding part of the Master of Science degree in Management Sciences at Universiti Utara Malaysia (UUM). In this section, I would like to express my gratitude and thankfulness to Almighty Allah, and to those who have been instrumental in the successful completion of my project.

First of all, my deep respect and sincere gratitude to my supervisor, Dr. Farrah Merlinda Muharam, for her assistance, guidance and constant encouragement during this research to materialize. She possesses characteristics that great supervisors should have: being approachable, friendly and providing sincere and well-intentioned feedback.

I would like to further my sincere appreciation to Othman Yeop Abdullah Graduate School of Business (OYAGSB), Universiti Utara Malaysia (UUM), the Student Affairs Department (HEA) and also the Student Accommodation Centre (SAC) who provided me with the data where my sample was drawn.

Also, my special thanks and appreciation to my state Governor, His Excellency, Engr. Dr. Mohammed Rabiu Musa Kwankwaso for sponsoring me among the 501 Kwankwasiyya Postgraduate Students Scholarship Program. I would also like to thank my parents and my family members for their unconditional support and understanding, especially my father Alhaji Iliyasu Ali who stood by me during my program.

CHAPTER ONE
INTRODUCTION

1.1 Background of the Study

Entrepreneurship is a global phenomenon affected by the emergence of new small and innovative start-up businesses, which is positively resulting in economic growth across the world. Due to these new small businesses positive contributions to the economy, it plays a significant role in creating new jobs, influencing governments to recognize and support entrepreneurial start-up activity. In the early days, entrepreneurship was traditionally viewed and supported by the economist as a mechanism that is responsible for economic expansion (Cole, 1965; Weber, 1930) due to its profit oriented association, as well as the formation of new markets and capital investment (Cantillon, 1755; Schumpeter, 1934).

According to the Global Entrepreneurship Monitor (GEM, 2000) report, society’s key social and cultural norms are the general attitude of the public towards entrepreneurship as well as the understanding and support of its importance in that society. For instance, in a study that was conducted in several European countries, it was found that society’s negative stance concerning change, innovation and creativity drastically reduced the number of people involved in forming or starting a new business.

Entrepreneurship from an academic point of view is still generally considered a new area even though its origin can be dated back to the seventeenth century, when an economist, Richard Cantillon gave the term, ‘entrepreneur’ (Cantillon, 1755). Numerous
