PERMISSION TO USE

In presenting this project paper in partial fulfillment of the requirements for a Post Graduate degree from the Universiti Utara Malaysia (UUM), I agree that the Library of this university may make it freely available for inspection. I further agree that permission for copying this project paper in any manner, in whole or in part, for scholarly purposes may be granted by my supervisor(s) or in their absence, by the Dean of Othman Yeop Abdullah Graduate School of Business where I did my project paper. It is understood that any copying or publication or use of this project paper parts of it for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to the UUM in any scholarly use which may be made of any material in my project paper.

Request for permission to copy or to make other use of materials in this dissertation/project paper in whole or in part should be addressed to:

Dean of Othman Yeop Abdullah Graduate School of Business
Universiti Utara Malaysia

Kedah Darul Aman

Kata kunci: Fenomena dividen yang menghilang, penumpuan pembayaran dividen, sektor hortanah.
ABSTRACT

Disappearing dividend phenomenon remains unexplored in the Malaysian market. Therefore, this study investigates whether or not the phenomenon exists in the Malaysian property sector. This is achieved by observing dividend pattern in the sector between 2000 to 2013. The study investigates dividend payout in the sector further by examining the factors that influence companies’ decision to pay or not to pay dividends. Trend analysis was used to describe the dividend pattern over the period while logistic regression analysis was conducted to determine the factors that influence companies’ payout decisions. Findings revealed an upward trend in the amount of dividends distributed in the sector over the period as well as in the number of dividend payers. The study provides evidence of dividend concentration in the property sector of Bursa Malaysia as results shows that a large portion of dividend paid out for all the years come from the top 10 payers. As revealed by the findings, the explanatory factors for dividend payout decisions in the Malaysian property sector include dividend premium, retained earnings to total equity, profitability, size, leverage, and past year dividend. Thus, findings of the study provide support for catering theory, lifecycle theory and dividend smoothing theory. Findings indicate that investment opportunities and crisis do not play any significant role in explaining payout decisions in the sector.

Keywords: Disappearing dividend, dividend concentration, property sector.
ACKNOWLEDGEMENT

First and foremost, Alhamdulillah, thanks to Allah S.W.T for providing me the guidance, chance, and strength to complete this dissertation to fulfill the requirement of Master of Science Finance at Universiti Utara Malaysia.

I would like to express my gratitude to both Ministry of Higher Education and Universiti Teknologi MARA who gave me the opportunity to further my studies by providing the necessary assistances.

To my supervisor Prof. Dr. Nur Adiana Hiau Bt Abdullah, I would like to thank you for all the support, guidance, advice, and understanding given in both academic and personal matters. I could not imagine better words that can describe how deeply honoured I am having you as my advisor. I would also like to thank Prof. Madya Dr. Rohani Bt Md Rus and Prof Madya Dr. Nasruddin Zainuddin for their feedbacks. Their commitment and time spent for this dissertation is most appreciated. I also like to extend my gratitude to Ms. Rihanat Idowu Abdulkadir who also guides me in completing this dissertation.

Finally, I would also like to thank my wife, Jannatul Akmal Bt Taib for her continuous support, patience and sacrifices ever since I continued my studies. The same goes to my father, Aziz Bin Othman, my mother, Rabiah Bt Allidin, and all my siblings for their utmost assistance and prayers. To them and also to my newborn baby, Farhan Mirza, I dedicated this dissertation.

CHAPTER ONE

INTRODUCTION

1.0 Introduction

Since the inception of dividend policy theory pioneered by Modigliani and Miller in 1961, the issue of dividend policy has attracted numerous researchers all over the world to study on this issue. This is because a company’s dividend policy provides vital information to both shareholders and stakeholders of the company. For example, from investor’s perspective, dividend policy adopted by a company will signal the firm’s future prospects and therefore affects its equity market value (Bhattacharya, 1979; John & Williams, 1985; Miller & Rock, 1985). This can help them in their investment decisions. Managers on the other hand could use dividend to reduce the agency cost (Easterbrook, 1984). Besides that, for creditors, excessive dividend paid to shareholders may serve as a red flag on debt repayment. Brockman and Unlu (2009) found that the creditor have the ability to influence the payout policy by exercising their rights. Black (1976) identified it as “dividend puzzle” since dividend policies are interrelated with other corporate decisions.

Fama and French (2001) discovered that dividends are disappearing due to significant reduction in the number of firms paying dividends in the United States (U.S.) market. This was later confirmed by Baker and Wurgler (2004) which proposed the catering theory, where dividend will be paid by a company to the investors based on the latter’s demand. Ali and Recep (2012) further support the existence of this phenomenon
