ABSTRACT

The economic development performance can be used to measure the economic growth of a given country. In economic analysis, a country can attain economic growth through the growth in national income measurement. However, the role of foreign direct investment (FDI) on economic growth continues to be debated and tested in the literature on international economics and development economies. This paper extends the previous empirical studies on the issue by providing some evidence from time series data for the period 1971 to 2013 of Ghana and Nigeria. The primary objective of this study is to analyze the impact of FDI on economic growth of Ghana and Nigeria taking trade openness, Gross Fixed Capital Formation and human capital as control variables. To investigate the long run equilibrium relationship, Johansen and Juselius co-integration approach is analyzed, while the speed of adjustment in the short run is analyzed through the use of VECM method. In addition to check for the direction between FDI, T.OPEN, GFCF, HK and economic growth, granger causality test is performed for both Ghana and Nigeria. In Ghana, all the explanatory variables have long run relationship with economic growth. In Nigeria, FDI, GFCF and HK have long run relationship with economic growth. However, the VECM results in Ghana reveal that only T.OPEN and GFCF are statistically significant and therefore have short run relationship with economic growth. Similarly, the coefficient of ECM is statistically significant at 1% level of significance. Thus, 23.3% of the adjustment is achieved due to the correction of the adjustment speed in a year. In Nigeria, the coefficient of ECM is statistically significant at 1% level of significance. Thus, 10.8% of the adjustment is achieved due to the correction of the adjustment speed in a year. To this effect, Ghana’s correction of the speed of adjustment in a year moves faster than that of Nigeria.
ABSTRAK

ACKNOWLEDGEMENT

In the name of Allah, Most Gracious, Most Merciful. All praise is to Allah the owner of the Worlds, and blessings and prayers is upon the Great prophet his family members, friends and those who follow them sincerely till the Day of Judgment.

My deepest gratitude to my supervisor Dr. Hussin Abdullah who suggests the approach and gives full encouragement, constructive criticisms and guidance especially when it comes to how to use software to obtain the results for my analyses. His assistance has helped me a lot in completing this thesis. Special thanks to him for understanding the time-consuming process required in completing this thesis. My intellectual debts are to the lecturers who taught me, particularly to Prof. Dr Jauhari, Dr Nor Azam Abdul Razak, Assoc. Prof. Dr Russayani Ismail, Dr Soon Jan Jan and also to Assoc. Prof. Dr. Sallahuddin who have given me so much knowledge and helping me to become a more mature person and a useful student who can contribute to Islam, race and nation, every time and everywhere. I will also like to extend my special regard to Assoc. Prof. Dr Nor Aznin, Assoc. Prof. Dr Ahmad Sabri and Assoc. Prof. Dr Lim Hock for sacrificing their time reading this dissertation. Thank you for the wonderful effort.

Special thanks and prayers to my beloved late Mum whom I lost during this program, may Jannatul Firdaus be her final abode. Also a million thanks to my father who have always been given me courage and support couple with prayers. Additionally, a million thanks to my beloved wife and my child who have unrelentedly been exercising patience for not being with them during the cause of this program, I love you, may Allah reward you for the wonderful effort. A special note of thanks goes to my family: My elder sisters and their family, my younger brothers and sisters.

A special note of thanks goes to my roommate Muhammad Ma’aji, who gives continuous encouragement and impressive support whenever I needed his help. I also give special thanks to all my friends and my colleagues; their assistance really means a lot to me. Special thanks also go to the staff of Sultanah Bahiyah Library, Universiti Utara Malaysia, for their information, help and guidance during my study.

A special thanks to my able and dedicative Governor Dr. Rabiu Musa Kwankwaso who perhaps without his support, I might not have secured this Knowledge. May Allah be your protector throughout your life. Last but not the least; I would like to thank everyone involved who has given inspirations and guidance whether directly or indirectly in completing this study successfully. Thank you. Alhamdulillah.

CHAPTER ONE

INTRODUCTION

1.1 Introduction

Foreign Direct investment (FDI) is an integral part of an open and effective international economic system and a major catalyst to economic development. FDI is simply defined as the long term participation by one country into another country. Normally, it involves participation in management, joint venture, transfer of technology and expertise (Agrawal & Khan, 2011). Similarly OECD (2008) referred FDI as a category of investment that reflects the objective of establishing a lasting interest by a resident enterprise in one economy (direct investor) in an enterprise (direct investment enterprise) that is resident in an economy other than that of the direct investor. However, the lasting interest signifies the long term relationship that will exist between the direct investor and the direct investment enterprise. Thus, a significant degree of influence on the management of the enterprise is expected to hold. Therefore, the statistical evidence of such a relationship is the 10% or more direct or indirect ownership of the voting power of an enterprise resident in one economy by an investor resident in another economy.

For many years FDI has been playing a vital role on economic growth. There were lots of discussions on the relationship between FDI and economic growth in both present and past theoretical and empirical literatures. However, most of the studies conducted on FDI and economic growth focus on the traditional neo-classical and the endogenous growth
