PERMISSION TO USE

In presenting this thesis in partial fulfillment of the requirements for a postgraduate degree from Universiti Utara Malaysia, I agree that the University Library may make it freely available for inspection. I further agree that permission for copying of this thesis in any manner, in whole or in part, for scholarly purpose may be granted by my supervisor or, in absence by the Dean of the Graduate School. It is understood that any copying or publication or use of this thesis or part thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to Universiti Utara Malaysia for any scholarly use which may be made of any material from my thesis.

Request for permission to copy or to make other use of materials in this thesis, in whole or in part should be addressed to:

Dean of Graduate School
Universiti Utara Malaysia

ACKNOWLEDGEMENT

In the Name of God, the Compassionate, the Merciful.

I am grateful to God for granting me with perseverance and strength to complete the postgraduate programme and the writing of this thesis.

I would like to express my most sincere gratitude to my supervisor, Dr Lee Seung Chun, for his unconditional support, guidance and patience, throughout the preparation of my masters project. I would like to extend my deepest appreciation to all lecturers from College of Arts and Sciences for providing me with invaluable learning experience during the course of my study.

This thesis is specially dedicated to my beloved husband, En. Kamarul Azman B Abdul Khalil and my children, Farah Adnin, Ahmad Zarif Atiq and Ahmad Raziq Imran. Their love and support were always my strength for accomplishing this study. A word of thank also goes to my parents, mother in-law, friends and colleagues for their advice and words of encouragement. The special thank also goes to Professor Elaine K Horwitz from Texas University who had read and commented on my first proposal of the study. Last but not least, thank you to all my respondents who participated in this study.

May God Bless all of you.
ABSTRACT

The construct of anxiety is believed to have a significant influence on L2 learning. The present study investigated anxiety from 5 perspectives: the relationship between anxiety and achievement, anxiety and gender, sources of anxiety, manifestation of anxiety and strategies coping with anxiety. A total of 120 students (60 males and 60 females) from Sekolah Menengah Teknik Alor Setar answered Foreign Language Anxiety Classroom Scale developed by Horwitz, Horwitz and Cope (1986) and 8 students (4 males and 4 females) were interviewed. The school-based results were used to represent students’ achievement. SPSS 13.0 was employed to analyze the quantitative data and the interviewed data was transcribed and analyzed. The results showed a significant negative correlation between anxiety and achievement but no difference in gender. Participants agreed with the sources of anxiety suggested by Horwitz (1986) namely communication apprehension, fear of negative evaluation, test anxiety and expressed other sources of anxiety such as writing activities and inability to comprehend what is being said. In terms of the manifestation of anxiety, participants showed both physical and psychological signs of anxiety. Some of the symptoms were stutter, palpitation, shaky, tremble, short of breath and restless. Some of the psychological symptoms were to avoid volunteering and demotivated to complete the given tasks. There were five main strategies to cope with anxiety, namely preparation, relaxation, positive thinking, peer seeking and resignation. Based on the findings the author made some pedagogical suggestions in reducing anxiety in language classrooms.
ABSTRAK

# TABLE OF CONTENTS

Permission To Use .................................................. i
Abstract ................................................................ ii

4.10 Means of items describing test anxiety 51
4.11 Means of items describing negative evaluation 52
4.12 Means of items describing general English anxiety 53
CHAPTER 1
INTRODUCTION

1.1 Introduction

With increased globalization, the growth of bilingualism and even multilingualism is seen prominent. The change in the world economy and the advancement in technology make people realize the need to learn a second language in order to be more competitive. Graddol (2006) estimated that by the year 2010, around two billion people will be learning English worldwide. Despite the fact that many people are bilinguals, some people are totally failure at second language learning (Dulay, Burt and Krashen, 1982). A plethora of researches on second language acquisition (SLA) have been conducted in understanding the complex nature of L2 learning. The goals of SLA researchers, then, are not only describing how L2 is acquired but also explaining this process and providing answers to why some learners are better at it than others.

Ellis (1985) in discussing the key issues in SLA proposed a five-factor framework for investigating SLA. The framework posits a number of interrelated factors, which are: situational factors, input, linguistic output, learner process and learner differences. Under the last factor that is learner differences, scholars further identify a whole range of learner factors that has potential influence on SLA including age, aptitude, cognitive style, personality and motivation (Ellis, 1985). In line with this, the humanistic psychologists such as Erik Erikson, Abraham Maslow and Carl
