This study investigates the impact of internal and external factors on Islamic bank’s profitability in GCC countries for a year period from 2006 to 2012. The study used three profitability measures namely, ROA, ROE and NIM. The study used a balanced panel data set of 175 observations of Islamic banks in 5 countries from the GCC. Seven independent variables are used in this study. These are divided into internal variables (size, management efficiency, loan, asset management and capital) and external variables (inflation and GDP). The results of the study indicate that management efficiency, loan, and GDP have positive and significant relationships with ROE. The study also finds that asset management and capital are positive and statistically significant with ROA, ROE and NIM. Inflation has a positive influence on bank’s profitability as measured by ROA and NIM. The study shows that size has a significant negative impact on bank’s profitability. Overall, the study finds that all internal variables and macroeconomic variables tested have significant impacts on bank’s profitability. The findings from this study provide valuable information not only to bank managers, but also to other parties such as government, shareholders, and potential investors with a better guideline and understanding to enhance Islamic bank’s profitability in the GCC.

Keywords: bank size, management efficiency, loan, asset management, capital, gross domestic products, inflation, bank profitability, GCC Islamic banks.
ACKNOWLEDGMENT

In the name of Allah most gracious, most merciful

First of all I praise and thank Allah for giving me the strength, blessings, guidance, knowledge to complete this dissertation. I would like to express my special appreciation and thanks to my supervisor Associate Professor. Mohamed Nasser Bin Katib for his guidance, encouragement and assistance. I have learned a lot from him and I highly appreciate his continuous help and support in all stages of this thesis.

A special thanks to my family. Words cannot express how grateful I am to my mother for her prayer, support, encouragement and patience for staying overseas which is far away from her. My greatest appreciation goes to my sister and my brothers for their prayers, support and encouragement. I would like to express my deep gratitude and respect and thank to my lovely wife Hanan Al-Khalifi for her love, support, encouragement, prayers and sacrifice. She always support me in moments when there was no one to answer my queries.

Last but not least, I would like to convey my appreciation to all my friends and lecturers of Universiti Utara Malaysia for their guidance and knowledge given to me.

CHAPTER ONE

INTRODUCTION

1.0 Background of the Study

Banking system has changed since the last few decades from general conventional banking to Islamic banking as it fulfills the needs and requirements of riba (interest) free society according to the Islamic teaching. Islamic economics is followed under the principle of Islamic law or “Shari’ah”. Shari’ah is the Islamic law that governs a Muslim daily life. It is derived from Al-Quran (The Holy Book) and Al-Hadith (the sayings of Prophet Mohammed Peace been upon him). The main important tenet of Sari’ah in doing business or economy is prohibition of riba (interest).

Islamic banks are known as financial institutions are also operated under the Islamic law. The most significant code that differentiate the profitability or losses and abort the collection (giving and charging) Interest or “riba”. The traditional banking system are those financial institutions which are offering their services such as debit and credit of customer cash flows, providing long and short term loans to their customers and other business services. These conventional banks are basically governed by the strategy to maximize their profitability on the basis of interest is not acceptable in Islamic way of operations as it is prohibited in Islam.

According to the Islamic principle of financial institutions, all the investments and trading on the basis of riba are prohibited. Under the Shari’ah ethical code of conduct, riba in any case should not be included as a profit. The investments can only be allowed
