ABSTRAK

Kata kunci: FDI, pertumbuhan ekonomi, hubungan sebab-akibat, Algeria.
This study estimates the impact of foreign direct investment (FDI) on economic growth of Algeria. Using an annual data from 1990 to 2013, the impacts of FDI are estimated and the short run causality relationship between FDI and economic growth are evaluated. Results reveal that in long run, the FDI does not have a significant impact on economic growth. However, there is a short run causal relationship from FDI to economic growth. This may due to the fact that the Algerian economy is heavily relying on crude oil and the absence of a conductive environment for foreign investors.

**Keywords:** FDI, economic growth, causality relationship, Algeria.
First, I would like to express my utmost gratitude to Almighty Allah for his creation and making me submissive to Him.

I would like to gratefully acknowledge the enthusiastic supervision of my project paper Associate Professor Dr. Lim Hock Eam. I could not have imagined having a better adviser and mentor for my Master project, and without his inspiration, stimulating suggestions, sound advice, guidance, and active participation in the process of work, I would never have finished.

Parts of this work would not have been possible without the active contribution of my colleagues Internetworks Research Group. I thank them for the long discussions we had, the papers they helped write, and their valuable feedback; among them, Awad, Houussam, Abbas, oussama, Elhachemi H Gherbi, Kamel, Fres, Dr Radouan, Dr toufk, Dr said, Dr chick Belgith, Bilel, Saleh, and many others.

I am also grateful to Economic Department, UUM Business School and UUM library, for providing research facilities and related resources that facilitates my study. It was an enjoyable place to work and study.

Finally, I am immeasurably grateful to my Father, Mother, Sisters, Brother and my wife for their kindness and support. They have always been there and encourage me; without their selfless love, I know I could not have successfully completed my studies.

CHAPTER ONE

INTRODUCTION

1.1 Background of Study

The beginning of first decade of the 21st century was exceptionally positive for the Algerian economy. From the 2000s till nowadays, the Algerian economy recovered well since the big socioeconomic crisis in 1990s. This recovery is shown with the yearly average growth from 2000 to 2009, of 3.7 and 5.6 percent for real GDP and non-hydrocarbon GDP respectively, while real GDP per head increased by 22 percent, and unemployment decreased from 29.5 percent in 2000 to 10.2 percent in 2009 (IMF Country Report, 2011).

The reason behind this remarkable achievement was an ideal worldwide macroeconomic environment checked by high oil prices, and reasonable macroeconomic strategies that brought about vast financial surpluses and expanding foreign exchange reserves. Regardless of the advancement made, the economy remains greatly reliant on the hydrocarbon area (98 percent of exports), private investment is excessively little, and a frail business climate remains a big obstacle for investment-led economic development. (IMF Country Report, 2011). The Algerian economy has achieved a real growth of around 2.8% (2013), a slight deceleration as compared to 3.3% of 2012. This slowdown is explained by a decline registered in the hydrocarbon sector and lower growth rates in the industry and
