ABSTRACT

Regardless of numerous studies on job performance, work engagement, Islamic work ethics and religiosity in workplace, all of these topics continuously remain as the most popular topics discussed among researchers in the recent years. This is because of the continuance of unethical cases and lack of religious realization in the organizations which lead employees to disengage and not performing well. This is the reason why this study was conducted. This study put emphasizes on Islamic religiosity which encourage an individual to apply Islamic work ethics in daily live. Additionally, this study is intended to explore the view from an Islamic organization on the relationship between Islamic work ethics and religiosity on job performance and simultaneously work engagement as the mediator on both variables. The findings of this study show a significant relationship on each variable and mediating effect of work engagement. The findings are supported by one main underpinning theory, namely Theory of Planned Behavior, which focuses on Perceived Behavioral Control. The article concludes with a discussion of the research findings, implications and limitations of the study, and recommendation for future research.

**Keyword:** Job Performance, Islamic work ethics, religiosity, work engagement, theory of planned behavior, perceived behavioral control
ABSTRAK

Kata Kunci: Prestasi kerja, etika kerja Islam, religiusitas, keterlibatan kerja, Teori Tingkah laku Terancang, Persepsi Kawalan Tingkah laku
ACKNOWLEDGEMENTS

I wish to express my deepest and warmest thanks first and foremost to Allah S.W.T, The Most Almighty and Merciful that I shall ever be indebted to for all His bounties upon me. Deeply grateful to our Prophet Muhammad S.A.W. of great messenger who has given light to mankind so that we can identify the true meaning of Islam in our life. I am greatly indebted and would like to thank to so many wonderful people for their contributions and spontaneous assistance in so many ways in completing this thesis.

First, I would like to thank to my supportive supervisor, Dr. Siti Norasyikin Binti Abdul Hamid for her supervision on critical assessment, supervision, invaluable advice, compassion, understanding, patience, kindness and encouragement throughout my study. Without her support, invaluable knowledge, efforts and time, it would be difficult to complete this research. My sincere thanks to my superb examiner and chairman; Dr. Awanis Binti Ku Ishak and Dr. Bidayatul Akmal binti Mustafa Kamil for their inspirations, encouragement and motivation.

I also wish and extend my deepest gratitude to my parents, Mr. Azharuddin Sahil, Mdm. Sri Rahayu, and to my parent-in-law, Supli Effendi Rahim and Nurhayati Damiri, for their endless support, patient, and prayers. I would also wish to thank to my sisters, Mia, Iin, Ika, Nur Aslamiah,
Nurul, and Rani, for their encouragement and spiritual support. Also many thanks to my husband Ahmad Affandi Supli who have fully support, provided exceptional guidance, and encourage me so that I wouldn't give up, be positive and be motivated to complete this research. Thanks for being beside me all my life.

Finally, special thanks to all my colleagues and lectures for their motivational spirit.

  3.2.4 Population and Sampling Technique.............................................................................47
3.3 Measurement......................................................................................................................48
3.4 Pilot Testing........................................................................................................................53
  3.4.1 Reliability of Instruments..............................................................................................53
3.5 Data Collection Procedures...............................................................................................55
3.6 Data Analysis Techniques..................................................................................................56
3.7 Questionnaire Design.........................................................................................................57
3.8 Summary.............................................................................................................................57

CHAPTER 4: DATA ANALYSIS AND RESULTS

4.1 Introduction.........................................................................................................................58
4.2 Respondents Background.....................................................................................................59
4.3 Construct Validity................................................................................................................62
  4.3.1 Convergent Validity.......................................................................................................62
  4.3.2 Discriminant Validity.....................................................................................................68
4.4 Structural Model Results.....................................................................................................72
  4.4.1 Examine Structural Model for Collinearity issues.........................................................72
4.4.2 Assess the Significance of Path Coefficients and the Relevance of the Structural Model

4.4.3 Assess of the Level of Predictive Power ($R^2$)

4.4.4 Assess the Effect of $f^2$ size

4.4.5 Assess the predictive relevance $Q^2$ and the $q^2$ effect size

4.5 Summary

CHAPTER 5: CONCLUSION AND RECOMMENDATIONS

5.1 Introduction

5.2 Research Process Overview

5.3 Recapitulation of Results and Research Findings

5.4 Implication of Study

5.4.1 Theoretical Implications

5.4.2 Practical Implications

5.5 Limitation of the Study

5.6 Recommendation for Future Research

5.7 Conclusion

CHAPTER 1

INTRODUCTION

1.0 Background of the Problem

In Malaysia, economic and political uncertainty gives a great impact on government regulations. Similarly with the mismanagement and financial uncertainty in an organization whereby will affect an employee to feel dissatisfied, disengage, neglect their task or even leave the company. Thus, most organizations nowadays tend to focus on excellent level of employees’ performance and retention in order to gain great competitive advantages. However, human being is complex. In which it will lead to some difficulties in sustaining good employees’ performance. Moreover, if the employee itself doesn’t feel a sense of belonging to the organization. As stated by Kilani (2010), it is possible to purchase man power but it is impossible to purchase employees’ minds, souls, and hearts.

To date, there are numerous of researches conducted on job performance (Hunter & Hunter, 1984; Randall, Cropanzano, Bormann, & Birjulin, 1999; Riketta, 2002; Reio and Kidd, 2006; Al-Homayan, 2013; Sai Mei Ling, 2014). Most of these studies emphasized on various predictors of job performance. In which the findings and the information is very crucial and valuable for an organization to enhance the performance of its employees. Looking at the importance of job performance among each individual of workers, this study focuses on Islamic work ethics (IWE), religiosity, and work engagement as the predictors of job performance.
