PERMISSION TO USE

In presenting this research paper in partial fulfilment of the requirement for a Post Graduate degree from the Universiti Utara Malaysia (UUM), I agree that the Library of this university may make it freely available for inspection. I further agree that permission for copying this research paper in any manner, in whole or in part, for scholarly purposes may be granted by my supervisor or in her absence, by the Dean of Othman Yeop Abdullah Graduate School of Business where I did my research paper. It is understood that any copying or publication or use of this research paper or parts of it for financial gain shall not be allowed without my written permission. It is also understood that due recognition given to me and to the UUM in any scholarly use which may be made of any material in my research paper.

Request for permission to copy or to make other use of materials in this research paper in whole or in part should be addressed to:

ABSTRACT

The purpose of this study is to analyze the influence of payoff, societal contribution, and conviction on entrepreneurial intention among Chinese university students based on the Theory of Planned Behavior. The current efforts by the government of China to increase interest in entrepreneurship among Chinese students in response to the growing challenges of poverty and unemployment have motivated the conduct of this study. The population of the study covers the Chinese students in Universiti Utara Malaysia. Using correlation analysis, this study has found that all variables (i.e. payoff, societal contribution, and conviction) are positively correlated to entrepreneurial intention. A more robust test by means of multiple regression, on the other hand, shows that among other variables, payoff positively and significantly influences entrepreneurial intention. This shows that payoff is the most attractive element for Chinese university students to engage in entrepreneurship. Thus, focus on payoff is crucial in order to promote greater interest for entrepreneurship among Chinese students.

Keywords: entrepreneurial intention, chinese students, payoff, societal contribution, conviction
ABSTRAK

Tujuan kajian ini adalah untuk menganalisa pengaruh ganjaran, sumbangan masyarakat, dan keyakinan terhadap kecenderungan keusahawanan dalam kalangan pelajar China di universiti berdasarkan Teori Tingkah Laku Terancang. Usahausaha terbaru oleh kerajaan China untuk meningkatkan minat dalam bidang keusahawanan dalam kalangan pelajar China sebagai tindak balas kepada cabaran-cabaran yang semakin bertambah contohnya kemiskinan dan pengangguran mendorong kajian ini untuk dijalankan. Populasi kajian ini merangkumi pelajar dari China di Universiti Utara Malaysia. Melalui analisis korelasi, kajian ini mendapati bahawa semua pemboleh ubah (iaitu ganjaran, sumbangan masyarakat dan keyakinan) mempunyai hubungan yang positif dengan kecenderungan keusahawanan. Ujian yang lebih mantap melalui analisis pelbagai regresi menunjukkan bahawa ganjaran memberi kesan yang positif dan signifikan terhadap kecenderungan keusahawanan. Ini menunjukkan bahawa ganjaran adalah elemen paling menarik bagi pelajar China untuk melibatkan diri dalam bidang keusahawanan. Oleh itu, tumpuan kepada ganjaran adalah penting untuk menggalakkan minat yang lebih mendalam terhadap keusahawanan dalam kalangan pelajar China.

Kata Kunci: kecenderungan keusahawanan, pelajar china, ganjaran, sumbangan masyarakat, keyakinan
ACKNOWLEDGEMENT

I am deeply grateful to have come to this point of accomplishing my own research paper on Management. Indeed, this humble work is a product not only of my personal hard work but also inspiration, encouragement, support and helpful contributions I receive from very generous, loving people.

I would like to take this opportunity to express my sincerest gratitude and love to my parents for supporting me throughout my education. Knowledge and wisdom, indeed, are the best gifts I will forever be indebted to my parents.

I wish to thank my dear supervisors Dr. Ooi Yeng Keat and Dr. Darwina Binti Hj. Ahmad Arshad for all the kind contributions and motivations they have shared me apart from giving their time and effort to help me in the development of this research paper.

Finally, I would like to thank my friends, colleagues, and lecturers in Universiti Utara Malaysia for all the help they have always selflessly given me.

CHAPTER 1

INTRODUCTION

1.1 Background of the Study

China has initiated market reforms since 1978 which have helped the country shift from an economy that is centrally planned to an economy that is market based (World Bank, 2014). These market reforms have also lead to rapid economic and social development. China’s average GDP growth of around 10 percent a year has improved the lives of more than 500 million people who used to live in poverty (World Bank, 2014). With an estimated population of 1.3 billion, China has recently risen to become the second largest economy in the world and it is increasing playing a significant and influential role in the global market (World Bank, 2014).

However as compared to advanced countries, China is still considered a developing country having a per capita income which is very small and market reforms which are yet to be fully realized and completed. According to an official data, at the end of 2012 there are still an estimated 98.99 million people who are living below the national poverty line of RMB 2,300 per year (World Bank, 2014). This means that China ranks second after India of having the largest number of poor in the world and as such poverty reduction remains a fundamental challenge in China.

In 2014 China’s GDP growth stands at 7.4 percent, which is considered desirable for most countries. However, for the government of China, much is yet to be done. Job
