ABSTRAK

ABSTRACT

This study examined the influence of four dimensions of environmental management system (EMS) human resource management practices which are recruitment and selection, training, performance assessment and rewards on environmental performance among the multinational companies in Penang, Malaysia. The researcher’s intention is to examine the effect of environmental management system (EMS) human resource management practices on environmental performance. A total of 75 multinational companies participated in this study. Regression analysis was performed to test the research hypotheses. The results of this findings revealed that the three dimensions of EMS human resource management practices (i.e. recruitment and selection, training and rewards) did not have a significant influence on environmental performance. However, performance assessment was found to have impact environmental performance significantly. This study provided theoretical and practical implications.
ACKNOWLEDGMENTS

In the name of Allah, Most Gracious, Most Merciful. All praise is due to Allah that we worship. Thanks to Allah for providing great health, strength and emotional support in completing this dissertation. It is with great honor to recognize the contributions and support to the supervisor, Prof. Dr. Khulida Kirana Yahya for her valuable time, guidance, ideas, suggestions, and encouragement during the preparation of this study. Thousand thanks and appreciation to all the lecturers in School of Business Management for their guidance, advice and assistance. A big heartfelt appreciation to the members of the family, especially to my husband for his continued support, understanding, and patience during the good times and even tougher time.

CHAPTER ONE

INTRODUCTION

1.0 Introduction

This chapter indicates about the background of the study, the statement of problem, research questions and objectives, the significant of the study, operational definition and the definition of the key terms used in this study.

1.1 Background of Study

Today, natural environment is a challenging issue for the organizations with the rapid development of the business and technology. It was due to global and local environmental problems. Locally, people are growing concern the needs in protecting and saving the environment and business todays are looking forward toward the greener workplace. Because of the more prominent general eco-friendly concerns it does need for organizations to execute legitimately eco-friendly plans and projects (Daily & Huang, 2001). One of the systems that are currently enforcing the environmental management procedure is the Environmental Management System (EMS). The competitive advantage will be gained by adopting formal environmental strategies and programs as in Aaron and Fetzer (p. 61, 2010), Yalmaz Sidiqui, Global Director of Environmental strategy at Office Depot stated that environmental strategy is a competitive differentiator and wide range of green solutions differentiate their company and help the customers to go green.
