DETERMINANTS OF MALAYSIAN STOCK RETURNS IN OIL AND GAS INDUSTRY

By

NUR FARHANA BINTI ABD AZIZ

Thesis Submitted to

Othman Yeop Abdullah Graduate School of Business,
Universiti Utara Malaysia,
In Partial Fulfillment of the Requirement for the Master of Sciences (Finance)
PERMISSION TO USE

In presenting this dissertation/project paper in partial fulfillment of the requirements for a Post Graduate degree from the Universiti Utara Malaysia (UUM), I agree that the Library of this university may make it freely available for inspection. I further agree that permission for copying this dissertation/project paper in any manner, in whole or in part, for scholarly purposes may be granted by my supervisor(s) or in their absence, by the Dean of Othman Yeop Abdullah Graduate School of Business where I did my dissertation/project paper. It is understood that any copying or publication or use of this dissertation/project paper parts of it for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and the UUM in any scholarly use which may be made of any material in my dissertation/project paper.

Request for permission to copy or to make other use of materials in this dissertation/project paper in whole or in part should be addressed to:

Dean of Othman Yeop Abdullah Graduate School of Business

ABSTRACT

This research paper documents the determinants of Malaysian stock return in oil and gas industry by eight factors that influence the stock return namely dividend-price ratio, earnings-price ratio, price-to-book ratio, asset growth, company size, capital structure, unsystematic risk, and systematic risk using Pearson Correlation analysis and Standard Multiple Regression analysis model in the Malaysia stock market (Bursa Malaysia). The existence of these relationships is examined in terms of fourteen oil and gas public companies in Malaysia that are listed in Bursa Malaysia Berhad, and their performance throughout a recent five consecutive years (2010-2014). Through Pearson Correlation analysis, the researcher reports a strong relationship and high significance level between asset growth and stock return; capital structure and stock return; and price-to-book ratio and stock return. While a weak relationship and low significance level between systematic risk and stock return; unsystematic risk and stock return; company size and stock return. Capital structure and unsystematic risk are variables that have inverse relationship with stock return while other variables indicate positive relationship with stock return. Overall, asset growth shows the highest significance level and variance in stock return while the systematic risk shows the lowest significance level and variance in stock return. Through Standard Multiple Regression analysis, dividend-price ratio, earnings-price ratio, price-to-book ratio, asset growth, and capital structure correlate substantially with stock return. The Durbin-Watson statistics reports the existence of positive serial correlation, significant difference and small effect size in the study. Asset growth reports the strongest unique contribution variable in explaining the stock return.

Keywords: return determinants, performance, dividend-price ratio, earnings-price ratio, price-to-book ratio, asset growth, capital structure, unsystematic risk, and systematic risk.
ABSTRAK

Kata kunci: hasil penentu, prestasi, nisbah harga dividen, nisbah perolehan harga, nisbah harga kepada nilai buku, pertumbuhan aset, struktur-modal, risiko tidak sistematik dan risiko sistematik.
ACKNOWLEDGEMENTS

I would like to send my gratitude to my research paper supervisor, Dr. Norshafizah Binti Hanafi, CA for her comments and guidance on my research paper, my Research Methodology lecturer, Dr. Jasmani Binti Mohd Yunus for her guidance and valuable comments and recommendation in conducting the research proposal during Research Methodology subject, her clarification and her acceptance of my selected topic. A big thank to Mr. Ravi Kumar, a library assistant in KnowledgeCentre@Bursa library, who assists me in collecting and extracting all the data from the Bloomberg database that is only available in the library. A huge thank to Mr. Razak Bin Siamin (Chief Librarian) in Universiti Utara Malaysia Sintok, Kedah, as he always give immediate responds to my request to check the originality of my research paper via Turnitin for three times. I also thank all the rest of the academic members and support staff in Universiti Utara Malaysia Kuala Lumpur. I would also like to express my gratitude to Universiti Utara Malaysia Kuala Lumpur and Universiti Utara Malaysia Sintok, Kedah for giving me an opportunity to produce a research paper. Thank you very much.

CHAPTER 1

INTRODUCTION

1.1. Background of the Study

Malaysia Business Forecast Report that includes 10-Year forecast from year 2014 to year 2023 recorded that Malaysian real GDP (Gross Domestic Product) is seeing a compound annual average rate of 4.0% (8.3% in nominal United States dollar terms) for over the next decade (from year 2014 to year 2023) as a result of continuous business environment improvement and further ASEAN (Association of Southeast Asian Nations) economic integration due to strong demographic trends. Even though this is slightly below the 4.3% (10.5% in nominal United States dollar terms) rate which is seen over the past decade, lower growth of working age population and the rise of labor productivity growth are seen to be the greater impact. There are risks of the lofty level of household debt and uncertainty regarding the fiscal trajectory but luckily not seemingly derails the economic strong prospects. Businesses in Malaysia benefit from one of the most open foreign direct investment regimes in East Asia and excellent access to financing on local equity markets. Since year 2010, Malaysia has been liberalizing many sectors of the economy to encourage growth and innovation via removing restrictions on FDI (Foreign Direct Investment). Malaysia’s Economic Openness score of 79.8 out of 100, being in second place out of twenty nine countries, behind Hong Kong. This empirical study by BMI (Business Monitor
