PERMISSION TO USE

In presenting this thesis in partial fulfillment of the requirements for a postgraduate degree from Universiti Utara Malaysia, I agree that the University Library may make it freely available for inspection. I further agree that permission for copying of this thesis in any manner, in whole or in part, for scholarly purpose may be granted by my supervisor or, in their absence by the Dean of the Graduate School. It is understood that any copying or publication or use of this thesis or parts thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to Universiti Utara Malaysia for any scholarly use which may be made of any material from my thesis.

Requests for permission to copy or to make other use of materials in this thesis, in whole or in part should be addressed to:

Dean of Graduate School

ACKNOWLEDGEMENTS

In the name of Allah, the Most Gracious, Most Merciful.

My deepest gratitude and appreciation goes to my project supervisor Dr. Lee Seung Chun who has guided and supported me in completing this project proposal. A special thanks goes to Dr. Fauziah Abdul Rahim for her generous support and guidance to help me in conducting my first stage of qualitative study, and also Dr. Ruzlan who taught me a lot in writing my research proposal. It will be my precious experience to learn from her on how to write a basic project paper without any prior knowledge before.

This project paper is specially dedicated to my beloved husband, Yus Hafizi bin Mohamad Yunos, my dear children, Danish Hakimi and Darris Hazimi, and my generous parents, Hj. Alauddin bin Lebai Jiwa and Hajjah Mashitah binti Aman, and my dear sister, Anis Marini who always be there for me for who I am, in cozy and difficult time. Thank you for all your love and encouragement, your care and support, your deep understanding and patience- I will not achieve this great success if not because of the unconditional love that all of you have endowed me.

My foremost gratitude goes to my best friend and loyal classmate, Saratha a/p K.Krishnan, who always be with me facing our hard moments together pursuing our Master programme in Universiti Utara Malaysia. I would also like to thank my best colleagues; Chong Yeo Nee, Nibrasal Firdaus and Ng Hooi Chuen for their helpful support during my difficult process of completing this project paper.

I would like to convey my appreciation to Perlis Matriculation College and Ministry of Education for the endless support for the teachers and lecturers like me to further my Master study in Universiti Utara Malaysia. Last but not least, my sincere gratitude goes to those who have directly or indirectly contributed and helped me in completing this project.

May Allah bless all of you.
ABSTRAK

Program televisyen kanak-kanak telah didapati oleh kebanyakan penyelidik sebagai satu medium yang berkesan untuk meningkatkan kebolehan literasi dan bertutur di kalangan kanak-kanak. Walaupun terdapat beberapa hujah yang bertentangan tentang impak program television kanak-kanak (Wilson, 2008; Cantor, 2002), terdapat juga beberapa kajian (Anderson & Pempek, 2005; Moses, 2008; Howard & Roberts, 2002) telah membuktikan bahawa sekinranya kanak-kanak didedahkan dengan pelbagai program pendidikan di televisyen, berpandukan tunjuk ajar dan bimbingan yang berkualiti daripada para ibu bapa, mereka mampu menunjukkan kesan yang positif dalam kemahiran bertutur dan lama-kelamaan akan menonjol dalam kemahiran membaca dan menulis mereka di pra-sekolah. Kertas kerja ini melaporkan hasil kajian ke atas program televisyen kanak-kanak yang menunjukkan impak yang positif ke atas perkembangan literasi mereka yang berumur antara 3 ke 5 tahun. Persoalan kajian ini adalah bagaimana program televisyen kanak-kanak membantu meningkatkan kemahiran bertutur mereka di dalam Bahasa Inggeris? Metodologi kajian ini melibatkan kajian kes khusus, berpendekatan pemerhatian yang teliti, yang dijalankan pada dua peringkat usia yang berlainan terhadap seorang subjek, semasa beliau berumur empat tahun, dan setelah beliau meningkat usia ke lima tahun. Kajian ini bertujuan untuk melihat perbandingan dalam kemahiran berkomunikasi oleh subjek dalam Bahasa Inggeris pada dua peringkat usia yang berbeza. Data dikumpulkan dalam bentuk hasil pemerhatian, interaksi yang dirakamkan di antara subjek dengan ahli-ahli, analisa tentang kandungan program yang ditonton subjek dan beberapa nota lapangan yang berkaitan, yang direkodkan dalam dua jangka masa yang berlainan mengikut umur subjek, pertama dalam satu minggu dan kedua, dalam empat bulan dengan pemerhatian yang teliti. Hasil perbincangan akan merumuskan sejauh mana program televisyen kanak-kanak mempengaruhi perbendaharaan kata kanak-kanak di dalam Bahasa Inggeris, interaksi subjek dengan ahli-ahli keluarganya semasa menonton program sasaran, dan perkembangan komunikasi subjek di dalam Bahasa Inggeris. Kajian ini juga mencadangkan beberapa cara untuk membantu para ibu bapa dan guru menggalakkan awal literasi di kalangan kanak-kanak melalui program televisyen kanak-kanak, dan membantu mereka memilih program yang sesuai dan menarik untuk ditonton oleh kanak-kanak di peringkat pra-sekolah.
ABSTRACT

Children’s television programmes have been discovered by many researchers as an excellent path towards literacy and oracy among young children. Although many contrary arguments are given by certain people regarding the impact of television programmes among young viewers (Wilson, 2008; Cantor, 2002) some studies (Anderson & Pempek, 2005; Moses, 2008; Howard & Roberts, 2002) have proven that if the children are exposed to a lot of educational programmes and with proper guidance from their parents and teachers, they unexpectedly reveal more positive learning in oracy skill and gradually show positive performance in reading and writing as they embark in preschool. The present paper reports on the positive impact of children’s television programmes among young children between 3 and 5 portraying literacy. The research question is how do the children’s television programmes help to improve the oracy skill of a second language child? The methods include two phases of case study. First, a closed and intense observation is conducted when the subject is 4 years old, and the second phase is conducted when the same subject grow older to 5 years old. This research compares the progress of communicative level in second language on the same subject in two different period of time. Data in the form of observations, recorded interactions between the boy and members of his family, content analysis of the programmes watched and field notes were collected within one intense week for the first stage, and 4 intense months for the second stage. The discussion of findings will include how far the children’s television programmes affect the second language child’s oracy through his vocabulary, the interaction that he does while watching the target programmes and the progress of his communicative level in second language. This study also suggests ways for parents and teachers to promote early literacy practices through children’s television programmes and help them to identify the characteristics of suitable attractive programs for their preschool learners.

CHAPTER 1

INTRODUCTION

1.1 Introduction

Television is essentially seen as a powerful teacher, presenting in a particularly effective way all kinds of lessons containing both desirable (e.g. educational / factual information or pro-social messages) and undesirable material (e.g. violence, stereotyping, consumerism) (Howard & Roberts, 2002). It is undeniably true that television programmes may affect children or young viewers in many aspects, specifically in their cognitive skills, social behaviours and achievements in later stages of development. Although some researchers such as Wilson (2008) and Cantor (2002) oppose the views of having benefits of television programmes to children, they do not agree on violence and negative aspects in certain programmes especially commercials and entertainments which are obviously not suitable for children at young age and teenagers. As Wilson (2008) adds, violent television programming contributes to children’s aggressive behavior, and a growing body of work indicates that playing violent video games can have the same harmful effect. But if children spend time with educational programmes, media exposure can have more
