Abstract

Social media is a growing phenomenon that is becoming more significant in academia and private lives. Looking at the conditions of school teachers in Iraq, being the users of social media, they are lack of ICT proficiency, which will lead to the creation of a new generation of ICT-ignorant students. In the research related to social media, social constructivism has been used frequently as a fundamental theory. Unfortunately, the relationship between the use of social media and ICT proficiency of the users had not been observed. Moreover, the previous research mostly focused on the higher education institutions and students as the object of the study. In recent reality, teachers are still having difficulties in using ICT tools, which means that there is a need to improve their ICT proficiency. To address these problems, this study seeks to examine the relationship between the use of social media and ICT proficiency among secondary school teachers in Iraq. To achieve research objectives, this study utilizes quantitative approach and a survey among Iraqi secondary school teachers. The findings demonstrate that using social media improved ICT proficiency among secondary school teachers in Iraq. The analysis and interpretation of this research can be applied to improve learning policies via the social media. This study concludes that the use of social media can enhance knowledge in working environments through interaction with peers, engagement and collaborative learning. This practice would have an impact in the improvement of the ICT proficiency among secondary school teachers in Iraq.

Keywords: Social Constructivism Theory, Interaction with Peers, Engagement, Collaborative Learning.
Abstrak

Katakunci: Teori Konstruktivisme sosial, interaksi dengan rakan sebaya, kerjasama pembelajaran.
Acknowledgements

In the name of Allah, the Most Gracious and the Most Merciful; all praise is due to Allah, Lord of the world. Blessings and peace be upon His Messenger, Muhammad. Praise is to Allah, the Most Exalted, whose mercy and blessing have enabled me to complete this study.

There are a number of individuals whom I owe my deepest gratitude. Firstly, my sincere appreciation, gratitude and heartfelt thanks go to my supervisor, DR. WIWIED VIRGIYANTI for continuous guidance, suggestions, and constructive criticisms in order to make this work a success, I thank her very much.

I would like to extend my appreciation to all the professors whom I met at UUM for their mentorship in my academic career. This dissertation is dedicated to my late parents. I dedicate this thesis to my wife and My children who unremittingly supported me during my years of study. They made this work possible.

To all my brothers and sisters, I say a big thank for their help and contributions, too many moments of insight, inspiration and support throughout my study.

I express my deepest thanks to Ministry of Education in Iraq for helping and supporting me and giving necessary advices and guidance and arranged all facilities to make my study (Master of science Information and Technology) easier.

Last, but not least, special thanks goes to all staff of Information and Communication Technology, College of Arts and Science, University Utara Malaysia and those that contributed indirectly towards the success of my studies.

THANK YOU UUM

NADHIM AZEEZ SAYEL

CHAPTER ONE

INTRODUCTION

1.1 Introduction

Information and Communications Technology (ICT) is a network that offers a steadily expanding range of new services (Saad & Hanna, 2011). It is a computer-based tool, used by the workforce of an organization to process information and communications needs. It encompasses the computer hardware and software, the network and several other devices, e.g. audio, video, photography, camera, etc., that convert information and so on into a common digital form (Yusuf, 2005). Njoku (2006) identified the three categories of ICT as processed information (computer systems), disseminated information (telecommunications systems), and represented information (multimedia systems).

Nowadays, ICT is not only considered as a tool that can be added to existing teaching methods, but is also seen as an important instrument to support new methods in the teaching-learning process (Yusuf, 2005). ICT is being integrated into the teaching-learning process in various educational institutions throughout the world. The successful integration of ICT into the teaching-learning process is highly dependent on the skills of teachers. The use of ICT in the classroom is very important for providing opportunities for students to learn and operate in the information age (Singh & Chan, 2014). The impact of modern ICT has significantly changed the speed of production, as well as the use and distribution of knowledge. At one time, the principal teaching resources available to a professor were the books in the college library,
