Abstrak

Dalam usaha meningkatkan tahap kompetensi ICT guru dalam perkhidmatan, kementerian telah merancang pelbagai program latihan dan kursus. Berdasarkan kajian lepas, salah satu faktor yang menjadikan program latihan dan kursus tidak mencapai objektif serta tidak memberi impak positif, adalah kerana kurikulum yang direka bentuk bagi program latihan dan kursus tersebut tidak berpandukan kepada standard kompetensi sedia ada. Kajian ini bertujuan membincangkan penggunaan aplikasi teknik Delphi untuk membina satu kepiawaian kompetensi ICT untuk guru-guru yang disahkan. Berdasarkan kajian literatur terdahulu, majoriti penyelidik bersetuju bahawa kompetensi melibatkan tiga dimensi iaitu pengetahuan, kemahiran dan sikap yang membolehkan seseorang individu melakukan tugas dengan berkesan. Justeru, dalam kajian ini, tiga dimensi tersebut diambil kira dalam menentukan kompetensi ICT yang perlu bagi guru-guru. Teknik Delphi digunakan sebagai reka bentuk kajian untuk mendapatkan pandangan konsensus daripada panel pakar mengenai apakah kompetensi ICT yang perlu bagi guru. Dua pusingan soal selidik diperlukan utnuk mendapatkan kriteria konsensus dalam kajian ini. Kajian ini memerlukan seramai 20 orang pakar yang terdiri daripada pegawai dari Jabatan Pendidikan Negeri, pegawai dari Pejabat Pendidikan Daerah, pegawai dari Bahagian Teknologi dan Pendidikan Negeri, pensyarah dari Institut Pendidikan Guru, guru sekolah menengah dan rendah. Satu kepiawaian kompetensi ICT yang sah dibina pada akhir kajian ini. Hasil dapatan kajian Delphi mendapat 21 item di bawah lapan konstruk iaitu dianggap penting untuk diukur serta mendapat konsensus tinggi melalui panel Delphi iaitu; Pemahaman mengoperasi ICT, Dasar, Merancang dan mereka bentuk persekitaran pembelajaran secara digital, Pengajaran dan Pembelajaran, Penilaian, Sumber, Peningkatan amalan profesional, serta Etika dan tanggungjawab, dinilai sebagai penting untuk diukur dan mencapai tahap konsensus tinggi oleh panel pakar Delphi. Secara keseluruhannya, kajian ini telah menyumbang kepada sistem pendidikan negara dalam memastikan kementerian mempunyai kepiawaian kompetensi ICT yang sah dan boleh dipercayai. Kajian ini juga telah menyediakan panduan untuk penyelidik akan datang tentang prosedur aplikasi teknik Delphi bagi mendapatkan pandangan konsensus pakar dalam menyelesaikan masalah kajian.

Abstract

In its effort to improve teacher's ICT competency, the Ministry of Education has designed various training programmes and courses. Based on previous studies, one of the factors that make the training program and course not achieving the objective and does not have a positive impact is that the curriculum designed for the training program and the course is not based on existing competency standards. This study aims to discuss the application of the Delphi technique in the research design in developing a valid ICT competency standard for teachers in Malaysia. Based on previous literature reviews, majority of the researchers agreed that ICT competency involves three dimensions which are knowledge, skills and attitudes, that allow an individual to perform tasks effectively. Thus, in this study, all three dimensions are taken into account in determining the ICT competencies needed by teachers. The Delphi technique is used as a research design to obtain consensus from experts regarding ICT competencies needed by teachers. In this study, two cycles of questionnaires were administered to obtain the consensus criteria. This study involved the participation of 20 experts comprising of officials from the State Education Department, District Education Office, State Technology and Education Department, lecturers from the Institutes of Teachers' Educational Institute and secondary and primary school teachers. At the end of this study, a valid ICT competency standard was developed. The result of this Delphi research found that 21 items from eight constructs, which are considered as important to be measured and obtained high level of consensus by Delphi panel experts namely; Understanding the Operation of ICT, Policy, Planning and Designing Digital Learning Environments, Teaching and Learning, Assessment, Sources, Improved Professional Practice and Ethics and Responsibility. This study will contribute to the national educational system to ensure that the Ministry of Education has a latest valid and reliable ICT competency standard. This study also provides a guide on the application of the Delphi technique procedures for future researchers so that expert consensus can be obtained for solving research problems.

BAB SATU

PENGENALAN

1.1 Pengenalan

Kajian ini telah membangunkan satu set kepiawaian kompetensi ICT untuk guru-guru di Malaysia. Kajian ini merupakan satu usaha awal dalam membangunkan satu standard kompetensi ICT untuk guru-guru Malaysia pada masa akan datang. Kajian ini juga telah mengaplikasikan teknik Delphi dalam mendapatkan pandangan konsensus daripada pakar mengenai apakah kompetensi ICT yang perlu diukur bagi guru. Prosedur teknik Delphi yang diterangkan secara terperinci dalam kajian ini diharap dapat membantu penyelidik akan datang untuk dijadikan panduan bagi kajian seterusnya.

1.2 Latar belakang kajian

Dalam menentukan kepentingan ICT dalam pendidikan, maksud sebenar kepada akronim ICT perlulah difahami. ICT merujuk kepada '*information and communication technology*' yang merujuk kepada satu set peralatan dan sumber teknologi; digunakan untuk komunikasi dan mencipta, menyebarkan, menyimpan serta mengurus maklumat (Yadav & Mehta, 2014). Dalam era moden kini, transformasi ICT merupakan satu fenomena berterusan yang berlaku hampir dalam setiap bahagian pentadbiran dibidang komersial seperti perdagangan samada diperingkat pengurusan serta pelaksanaan. Selain melibatkan bidang komersial, transformasi ICT juga bukan perkara baharu dalam bidang pendidikan. Menyedari hakikat ini, Kementerian Pendidikan Malaysia (KPM) sentiasa berusaha memastikan
