PERMISSION TO USE

In presenting this thesis in partial fulfillment of the requirements for a postgraduate degree from the Universiti Utara Malaysia, I agree that the University Library may make it freely available for inspection. I further agree that permission for copying of this thesis in any manner in whole or in part, for scholarly purposes may be granted by my supervisor(s) or in their absence by the Dean of the Graduate School. It is understood that any copying or publication or use of this thesis or parts thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to Universiti Utara Malaysia for any scholarly use which may be made of any material from my thesis.

Requests for permission to copy or to make other use of materials in this thesis, in whole or in part, should be addressed to:

Dean of Graduate School

ABSTRACT

Mobile technology is the most famous portable technology, the mobile devices include laptop computers, Personal Digital Assistances (PDAs), and mobile phone. With mobile solution services can be obtained easily at any time in any where, this research introduces a prototype “Mobile Ticket for Darulaman Stadium in Alor Star City that provides the crowd with the ticket for watching matches without losing time and effort. , mobile application allows to the users to use the Information Technology without being bound to a single location; it provides the users with the flexibility. This technology enables users to the access any time in any location; this research will propose a Mobile E Ticketing Reservation Application Prototype for Darulaman Stadium in Alor Star city.

ACKNOWLEDGEMENT

Firstly, I would like to express my deepest sense of gratitude to my supervisor Assoc Prof. Wan Rozaini bt Sheik Osman and Dr Aniza Mohamed Din for the patient guidance , encouragement, understanding, and excellent advice throughout this study.

I am also thankful to all my colleagues and friends at UUM, especially from the faculty of information technology for their help and support, with whom I shared pleasant times.

I am deeply and forever indebted to the people in my life who touched my heart and gave me strength to move forward to something better. The people who inspire me to breathe, who encourage me to understand who I am, and who believe in me when no one else did. To my lovely mother.

Finally, I would like to dedicate this work to the memory of my father.

CHAPTER 1

STATEMENT OF OBJECTIVE

1.0 Background

Mobile technology is most popular portable technology. The mobile devices include laptop computers, Personal Digital Assistances (PDAs), and mobile phones. The mobile services different from the usually mode in the capacity to provide services of temporal and spatial constraints. They are also different from the usuall interpersonal services that are delivered on the spot, or from other types of e-services, such as online services, where the service delivery is linked to a specific LAN network.

Mobile application allows to the users to use information technology without being bound to a single location; it provides the users with the flexibility. This technology enables users to the access any time in any location

An example of mobile and wireless technology is M-Ticketing application to reduce the costs and the effort, for example in client services to improve ticket validation in making
