PERMISSION TO USE

In presenting this thesis in partial fulfillment of the requirements for a postgraduate degree from Universiti Utara Malaysia, I agree that the University Library may make it freely available for inspection. I further agree that permission for copying of this thesis in any manner, in whole or in part, for scholarly purpose may be granted by my supervisor(s) or, in their absence by the Dean of Research and Post Graduate Studies. It is understood that any copying or publication or use of this thesis or parts thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to Universiti Utara Malaysia for any scholarly use which may be made of any material from my thesis.

Requests for permission to copy or to make other use of materials in this thesis, in whole or in part, should be addressed to

Dean of Research and Post Graduate Studies

College of Arts and Sciences

Universiti Utara Malaysia

06010 UUM Sintok

Kedah Darul Aman.

ABSTRACT

One of the problems that the university faces is the exams scheduling problem, this problem affects on both staffs and students. The efforts to solve this problem were started since long time, and it varies in use of the application and algorithms to solve this problem. In this study, the researcher exposed to this problem at Universiti Utara Malaysia (UUM). Because of the nature of the educational operation, students asked to register for elective and core courses, the elective courses are taken from other departments, which will make some conflict at the final exam schedule.

The other type of conflict is reserving the same room to conduct two or more exams at the same time, since the faculty or college rooms are shared among the departments, the researcher in this study will implement an automated way to help in solving the conflict and make it easier to arrange such.

ACKNOWLEDGEMENTS

First and foremost, all praises to Allah (SWT), that without his Almighty and Merciful I would not have been able to do this work and finish it.

I would like to express profound gratitude to my advisor, MR.AHMED HISHAM for her invaluable support, encouragement, supervision and useful suggestions throughout this research work. Her moral support and continuous guidance enabled me to complete my work successfully.

I am as ever, especially indebted to my parents for their love and affection; they taught me the importance of education and always encouraged me to work harder and better. I also wish to thank my brothers and my sister for their support, help and understanding during my study.

Last but not least, I wish to thanks those tremendous individuals, who have directly and/or indirectly, given me the emotional strength and support needed during the course of my study.

Chapter One

1.1 BACKGROUND

According to Shu-Chuan et al. (2006) the problem of timetabling is a problem of time-based planning and combinatorial optimization. The problems become good constructive issue for the critical points on some sectors such as examination, lecture and transportation time table. Therefore, further holistic research will be necessary needed to figure out the real problem and the causes so that the appropriate solutions can be formulated.

Each university has its own methods and regulations to arrange its internal matters, consequently. The university contains colleges or faculties which supervise some departments of management for the employees (academic department, student affair department, etc) and departments of study programs for the students (information technology, Artificial Intelligence, Communication Technology etc).

To enable each faculty to conduct their functions of leadership and management, a well-structured of staffs is implemented under the leadership of deanship. Dean as the highest leader in the faculty will arrange the staffs to undergo the daily activities and guide in the problem solving. But somehow since problems or conflicts are natural

The contents of
the thesis is for
internal user
only

reserved at that time to another exam. The other factor in solving the problem was the student, so when the lecturer will determine an exam date and time, and there is at least one student has exam at the same time, so the lecturer will receive notification message with the number of students who have exam at the time and lecturer will be asked to change the due date for the exam.

5.3 SUMMARY

The automated systems allow the various institutions to avoid the conflict states. By linking the various departments and the people in these departments to a shred database among the system usage within the faculty, it allows the system to test the availability of the rooms and the student exams with regards the various subject that the student have, which lead to avoid the conflict state that may occur.
