PERMISSION TO USE

In presenting this thesis in partial fulfillment for a postgraduate degree from the Universiti Utara Malaysia, I agree that University Library may make it freely available for inspection. I further agree that permission for copying of this thesis in any manner, in whole or in part, for scholarly purposes, may be granted by my supervisors or, in their absence, by the Dean of the Othman Yeop Abdullah Graduate School Of Business, College Of Business. It is understood that any copying or publication or use of this thesis or part thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to Universiti Utara Malaysia for any scholarly use which may be made of any material from my thesis.

Requests for permission to copy or to make other use of material in this thesis, in whole or in part should be addressed to:

Abstract:

Brazil has been one of the significant recipients of foreign direct investment (FDI) among the newly emerging markets of global economy over the last 20 years, and has recorded rapid and sustained growth rates in a number of different industrial sectors. Indeed, FDI plays a significant role in the Brazilian economy. Brazil has been pursuing different foreign investment policies at different times depending on the development objectives and economic situation in the country. The present study has focussed on to empirically examine the influence of macroeconomic variables on Foreign Direct Investment in the Brazilian economy. The chosen macroeconomic variables are Gross Domestic Product (GDP), GDP per Capita (GDPPC), GDP growth rate(GDPGR), Trade ratio(TR), Exchange rate(ER), Inflation (INF) and rate of interest (Ri) as major determining factors. Regression method is applied to assess the functional relationship among these variables. The study is confined to the period of 20 years over 1990-2009 in Brazil. The findings of this study show that there is a strong positive relationship between Ex Rate, GDP, GDPPC and TR to the flow of FDI in the Brazilian economy. However, negative association between GDPGR, INF and Ri to FDI.
ACKNOWLEDGMENTS

In the name of Allah, Most Gracious, Most Merciful

I would like to express my sincere gratitude to my supervisor, Prof. Dr. Dawood Ali Mohamed Ali Mithani, for inspiration and guidance in this thesis. His valuable comments and suggestions enabled me to complete this study within a study span of time with scholarly truth. He has boosted my confidence in presenting this research work.

I am also deeply obligated to my friends for their valuable suggestions and constructive comments. Last, but not least, I would like to acknowledge the constant support of my wife and family for their faith, understanding and encouragement during my studies.

CHAPTER ONE: BACKGROUND OF THE STUDY

1.1 Introduction

Foreign Direct Investment is largely viewed as a major stimulus to economic growth in developing countries. It is a device to deal with major growth obstacles such as shortages of financial resources, technology and skills. As such, FDI flow has captured centre of attention for policy makers in developing countries including Brazil. FDI technically refers to investment made to acquire a lasting management interest (usually at least 10% of voting stock) and acquiring at least 10% of equity share in an enterprise operating in a country other than the home country of the investor. FDI can take the form of either “green field” investment (also called "mortar and brick" investment) or merger and acquisition (M&A), depending on whether the investment involves mainly newly created assets or just a transfer of management functions from local to foreign firms.

1.2 Definition of FDI

Foreign direct investment, in essence, is simply investment that crosses over international boundaries. This kind of investment, however, is more complicated in practice. Before proceeding further into this paper it is worthwhile to have clear idea about the basic definitions of what constitutes foreign direct investment and its related jargon.

Foreign Direct Investment (FDI) is the act of a company located in one country acquiring controlling equity of another company or entity located in a second country. The United Nations Conference on Trade and Development’s (UNCTAD)
