ABSTRACT

A steady bank system is important cornerstones which can help modern economies maintain stability and healthy development. In order to achieve this goal, China's banking industry has experienced a long-term reformed process. The purpose of this study is to research some vital factors which influence performance of the commercial banks industry in China. This study takes 4 state-owned and 2 joint-stock commercial banks of China as the research sample, by analyzing the impact of the economic variables and bank specific variables on bank performance. The variables are real growth rate, inflation rate, exchange rate, global finance crisis (for economic variables) and bank’s risk management-loan to deposit and equity ratio, bank’s size, property sector, net interest margin factors, interest income ratio and deposit-assets ratio (for bank specific variables). The bank performance is measured by ROE. The findings show that all variables contribute 85.8% to the commercial bank performance in China. Seven factors namely exchange rate, bank’s risk management-equity ratio, bank’s size, net interest margin factors, interest income ratio and deposit-assets ratio are significant determinants of bank performance in China.
ACKNOWLEDGMENTS

My utmost gratitude to my supervisor Professor Dr. Nor Hayati Bt Ahmad, who guided me all the way from the process of submission of the proposal and encouragement to the end of this thesis. Without her help, I would not have made it this far in producing a paper which includes research methods, unfamiliar to me. However, with her guidance, I have learned and developed a love for research, and with this new found interest, hope to do more research work in the near future. In particular, I would like to thank my examiner Nora Azureen Abdul Rahman who has given a lot of guidance upon the completion of this thesis.

I would like to thank my parents, who have been a continuous source of inspiration and encouragement. Thanks for giving a great support throughout the duration of my studies and unceasing prayers for my success.

In addition, thanks to my friends that helped, supported and provided insightful and useful ideas, constructive comments, criticisms and suggestions throughout the duration of completing this research.

Thank you.

Chapter One
Introduction

1.1 Introduction

This thesis intends to study the factors influencing commercial banks performance in China. The study gives special attention to China in view of the growing importance of banks to China’s economy. This study combines economic and bank specific variables to analyze how they influence commercial bank performance in China.

At present China banking system includes four big state-owned commercial banks, 11 share-holding commercial banks. Many of the commercial banks and credit cooperatives have competitors from China's foreign financial institutions. In addition, there are policy banks in specific fields established with special functions. According to China's accession to WTO commitments, China opened its banking system to global market domestic in 2006. China banking financial institutions’ total asset is RMB31.59 trillion, more than 14.0% growth compared to the corresponding period last year. Total debt is RMB 30.32 trillion, more than 13.8% growth than the corresponding period last year. Among them, the state-owned commercial banks' total assets accounted for 53.6% of the total assets of banking industry, total liabilities accounts is 53.5% of that of the banking financial institutions in China.

China banking is the most important part of the financial system (66% of the total
