PERMISSION TO USE

In presenting this thesis of the requirements for a Master of Science in Information Technology (MSc. IT) from Universiti Utara Malaysia, I agree that the University library may make it freely available for inspection. I further agree that permission for copying of this thesis in any manner, in whole or in part, for scholarly purposes may be granted by my supervisor or in their absence, by the Dean of Graduate School. It is understood that any copying or publication or use of this thesis or parts thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to Universiti Utara Malaysia for any scholarly use which may be made of any material from my thesis.

Request for permission to copy or make other use of materials in this thesis, in whole or in part, should be addressed to:

Dean of Graduate School

ABSTRACT

With Design WAP-based to Web-based Patient Emergency Service System for Pusat Kesehatan Universiti (PKU) by using the wireless technology can be obtained easily way and flexibility to access the information at any time in any location. This research introduces a Wep-WAP application that provides the Doctors of Pusat Kesehatan Universiti (PKU) by provide them with the patient information accessing anytime and anywhere to check the patient status, that save the time to check the patient status from different places. By using this technology, Doctors can easily get necessary information about their patient.

ACKNOWLEDGEMENT

My gratefulness to my supervisor and helpful supervisor, DR: MUSYRIFAH MAHMUD for assisting and guiding me in the completion of this research. With all truthfulness, without her, the project would not have been a complete one. She has always been my source of motivation and guidance. I am truly grateful for her continual support and cooperation in assisting me all the way through the semester. I am grateful to ASSOC.PROF.DR.WAN ROZAINI SHEIK OSMAN for her help in making my project successful.

I would like to present my thanks to my father, my mother and all my family who has always been there for me. Finally, I would like to express my appreciations to all my friends, colleagues, FTM staff, and everyone who has helped me in this journey.

CHAPTER 1

INTRODUCTION

1.0 Introduction

Mobile technology has developed into one of today's eye-catching topics due to its ability. The impact it has on everyday lifestyle is obvious. As the popularity of wireless services grows, manufacturers are enabling wireless devices with an increasing array of features and capabilities. However, a new "motto" being mentioned in the market place—Wireless Application Protocol which is known as WAP. The WAP visualized being a web in pocket. As the benefits of the WAP are recognized and become more widely. The WAP brings with it the convenience of distributing information efficiency regardless of geographical boundaries and time.

This study will discuss the idea of implementing WAP-based to web-based patient emergency service system (WPRESS), objectives and significance of the project and the concept of Web Application technology. The waterfall methodology will be followed throughout of this study.

1.1 Motivation

Pusat Kesihatan Universiti (PKU) is the University health center. This is first computerized clinic in Malaysia (1984). It is provide a comprehensive health service that coves medical and dental treatment, counseling, first aid, surgery and medication for students and staff. Other
