PERMISSION TO USE

In presenting this thesis in partial fulfillment of the requirements for a postgraduate degree from Universiti Utara Malaysia, I agree that the University Library may make it freely available for inspection. I further agree that permission for copying of this thesis in any manner, in whole or in part, for scholarly purpose may be granted by my supervisor(s) or, in their absence by the Dean of the Academic Office. It is understood that any copying or publication or use of this thesis or parts thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to Universiti Utara Malaysia for any scholarly use which may be made of any material from my thesis.

Requests for permission to copy or to make other use of materials in this thesis, in whole or in part, should be addressed to

Dean of Academic Office

Acknowledgements

First and foremost, I would like to thank my greatest teacher of all: ALLAH. I feel very fortunate to pursue my studies here in UUM.

The completion of this thesis would not have been possible without the support and encouragement of several special people. Hence, I would like to take this opportunity to show my gratitude to those who have assisted me in a myriad of ways:

I would also like to express my heartfelt thanks to my supervisor Dr. Mohd Syzwan Abdullah who is a supportive and considerate supervisor I could not have asked for.

I would like to thank my dear brother Mohammed Sami, the one person who has been a constant source of support and encouragement and has made an untold number of sacrifices for the entire family, and specifically for me to continue my studies. He is a great inspiration to me. Hence, great appreciation and enormous thanks are due to him, for without his understanding, I am sure this thesis would never have been completed. I have become a better woman because of your support. Thank you and I love you.

I would like to thank my parents. They gave me my name, they gave me my life, and everything else in between. Thank you for your support and encouragement. No words enough to thank my beloved sisters; Mais, Murooj, and Lamis for their support and patience during my study.

I thank you all.

ABSTRACT

This project is considered as an idea to give the women a plan to leave home or the abuse place in the convenient moment. It provides the abused women with quickly escape button from the current page to prevent increasing her abuse. Also, it allows women to reveal the problems which they are exposed freely. It exposes the problems of abused women on the web page with the advice provided to them if there was a piece of advice. In addition, it allows other women who face the same problem to see the appropriate solution or advice provided to those who live the same circumstances. This project also provides the women with the places of housing provided by the Government of abused women to turn to her after leaving their homes. Furthermore, it provides the women with all sources of books written in a woman's right to defend themselves and providing them with their last laws that have been enacted in any field.

CHAPTER ONE

1.0 Introduction

The evolution in all areas of technology, especially in the field of Information and Communication Technology (ICT), has made government think in the exploitation of this development in the delivery of services to citizens. Building e-government in most countries is the result of this development in this technology. The Electronic government is defined as the use of Internet and other electronic form devices in public sector to deliver services and information (Mesenbourg, 2001); (West, 2004)

Electronic government is the way to do the general transactions in electronic way instead of doing it in manual way. This can save the citizen's time and money, and make the transactions easier. This also can reduce bribery in the classic government which is much expended in the Arabic world and may be in almost of the world.

The electronic government services are created to increase the communication between the governments and to strengthen the relationship between the governments and segments of society which are
