DECLARATION

I hereby declare that the project paper is based on my original work except quotations and citations that have been duly acknowledge. I also declare it has not been previously or concurrently submitted for any other Master's programme at Universiti Utara Malaysia or other institutions

ROSMARINIWATI BINTI ISMAIL

DATE : 30TH JUNE 2012

PERMISSION TO USE

In presenting this thesis in partial fulfillment of the requirements for a post graduate degree from Universiti Utara Malaysia, I agree that the University Library may make it freely available for inspection. I further agree that permission for copying this thesis in any manner, in whole or in part, for scholarly purposes may be granted by my supervisors Prof Dr Nor Hayati Ahmad or, in their absence, by the Dean of Research and Innovation. It is understood that any copying or publication or use of this thesis or parts thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to Universiti Utara Malaysia for any scholarly use which may be made of any material from my thesis.

Requests for permission to copy or to make other use of materials in this thesis, in whole or in part, should be addressed to :

Dean of Research and Innovation

ABSTRAK

Desertasi ini adalah bertujuan untuk mengkaji faktor-faktor yang mampu mempengaruhi keuntungan sesebuah bank di Malaysia. Desertasi ini juga meliputi tempoh dari tahun 2006 sehingga 2010 dengan enam (6) bank yang dipilih iaitu CIMB Bank Berhad, Maybank Berhad, Public Bank Berhad, RHB Bank Berhad, Hong Leong Bank Berhad dan Affin Bank Berhad. Objektif utama kajian ialah untuk mengenalpasti faktor bukan kewangan dan faktor kewangan yang boleh mempengaruhi keuntungan sesebuah bank. Objektif kedua, mengkaji perbezaan di antara kepentingan faktor bukan kewangan dan faktor kewangan yang telah dikenalpasti dan objektif ketiga adalah mengkaji penyumbang signifikan setiap pembolehubah ke atas keuntungan bank-bank yang dipilih. Desertasi ini menggunakan (ROE) pulangan atas ekuiti sebagai satu pembolehubah bersandar dalam menganggar keuntungan sesebuah bank. Manakala, sebelas (11) pembolehubah tidak bersandar juga turut digunakan dalam kajian ini di antaranya ialah nisbah kecukupan modal (CAR), modal kepada nisbah aset (CR), nisbah leveraj (LEV), saiz bank (SIZE), deposit pinjaman (LD), peruntukan atas kerugian pinjaman (LLP), keamatan pelaburan modal (CII), aset mudah tunai (LIQ), kadar pemberian pinjaman asas (BLR), kadar inflasi (IFL) dan keluaran dalam negeri kasar (GDP). Analisis regresi berganda telah digunakan dalam mengenalpasti kepentingan setiap pembolehubah dan keputusan kajian telah menunjukkan hanya dua pembolehubah iaitu (SIZE) dan (LIQ) sebagai penyumbang signifikan terhadap keuntungan sesebuah bank dengan mengambikira 10% tahap keyakinan.

ABSTRACT

The purpose of this study is to investigate the factors that influence the profitability determinants on banks in Malaysia. This study covers six (6) anchor banks in Malaysia i.e. CIMB Bank Berhad, Maybank Berhad, Public Bank Berhad, Hong Leong Bank Berhad, RHB Bank Berhad and Affin Bank Berhad during the period of 2006-2010. The objective of this study are firstly to find out the non finance factor and finance factor influence the banks' profitability in Malaysia. Second objective is to identify the non finance versus finance factors influence on the profitability and third objective is to differentiate the significant profitability of finance and non finance factors. The study used ROE as a dependent variable to estimate the bank's profit. The independent variables used in the study consisted of 11 variables namely capital adequacy ratio (CAR), capital to asset ratio (CR), leverage (LEV), bank size (SIZE), loan deposits (LD), loan loss provision (LLP), capital investment intensity (CII), liquidity assets (LIQ), Base Lending Rate (BLR), inflation rate (IFL), and gross domestic product (GDP). Multiple regression analysis has applied to examine the significance contribution of these variables in the bank's profitability. The results however show that only SIZE and LIQ are significant at the 10% confidence level.

ACKNOWLEDGEMENTS

Praise to Allah, the Most Gracious and the Most Merciful who gave me the physical, mental and spiritual strength to complete this thesis amidst many difficulties. My highest and most sincere appreciation goes to my beloved husband Mohd Mursyidi Md Nawawi , whom without his love and support would not made possible for me to pursue my education in this university and also my special thank to my mother Pn. Ramlah Din and family members Aliff Akmal, Alya Batrisya, Rohayati, Siti Chahara, Mohd Rosdi and Mohd Izham, who had always encouraged and guided me to be independent and strong.

Besides that, we would like to extend our heartfelt gratitude and appreciation to our beloved supervisor, Prof Dr Nor Hayati Ahmad for helping us to map out the course of our thesis paper as well as being a diligent mentor that we could count on at all times. Without her guidance, we would not have been able to complete this paper in due time. As well as, I wish to thank to Assoc. Prof Norafifah Ahmad for her kind support and being an examiner for this thesis.

To my fellow course mate Rosilawati, Kamarizah and Zuraida who provided their view, opinion and advise during the writing of this thesis. Thanks again to everyone including those who I have probably forgotten to mention here.

CHAPTER 1

INTRODUCTION

1.1 Introduction

The Banking sector acts as the life blood of modern trade and commerce to provide them with a major source of finance. Banks, as the critical part of financial system, play an important role in contributing to a country's economic development. If the bank industry does not perform well, the effect to the economy could be huge and broad.

From their empirical findings, Demirguc-Kunt and Detragiache (1999) suggested that bank profitability is an important predictor of financial crises. Therefore, the study of the determinants of the bank profitability becomes an important issue which could help banks understand the current conditions of the banking industry they are involved in and the critical factors they should consider in making decisions and creating new policies either for recovery or improvement. Within the banking system, the commercial banks are the major players that accounted for about 42% of the total assets of the financial system as at the end of 2007 (IBBM 2007).
